CMCO
INTELLIGENT MOTION
Columbus McKinnon

About Columbus McKinnon

Columbus McKinnon has over 150 years of history and is a global leader in lifting and intelligent motion control technology.

Its innovative portfolio of high-quality brands including Stahl CraneSystems, Yale, Pfaff-silberblau and Dorner, addresses the needs of our customers by enhancing business safety and promoting their growth and efficiency.

Experience, expertise and innovation combined with a broad understanding of user requirements are the winning formula on which our product portfolio of hoists, material handling equipment and load handling devices has long been based.

Columbus McKinnon is a global organization headquartered in Buffalo, New York. Its global presence includes offices and manufacturing facilities in North America, Latin America, Europe, Africa and Asia.

Columbus McKinnon
Industrial Products GmbH
Yale-Allee 30, 42329 Wuppertal

www.cmco.com

The brand STAHL CraneSystems

The STAHL CraneSystems brand stands for reliable and safe hoists and crane components as well as methodical engineering solutions.

The products are used in standard, special and explosion-protected bridge cranes or hoisting systems in industries such as automotive, oil and gas, power station construction, chemical industry, transport and logistics, steel and concrete industry, mechanical and plant engineering, air and road transport industry as well as in the pharmaceutical and food industry.

The brand Yale

Yale is the leading brand in Europe for standard manual hoists. Delivered ready for use, the devices are used in a variety of industrial and commercial sectors worldwide: in construction, mechanical engineering, transport, energy & water management, oil & gas and paper production.

The application-oriented range as well as all innovative new and further developments of Yale products are constantly raising the bar in terms of quality, reliability and safety. The wide range of products includes hoists, cable pullers, jib and gantry cranes, load handling equipment and weighing technology, hydraulic tools, heavy-duty load moving systems, pallet trucks and stackers, textile lifting and lashing equipment.

Lifting Distribution

Lifting Solutions

Conveyance Solutions

Linear Motion Solutions

The brand pfaff-silberblau

Pfaff-silberblau has been a technological leader in drive and lifting technology for 150 years. Innovative complete solutions with worm gear screw jacks, electromechanical components of linear drive technology or hoists for steel and heavy industry, logistics, stage technology, for off-shore plants and ATEX areas. With this unique portfolio of hoisting gear units, customers can combine components and solutions according to their needs. The Pfaff portfolio of winches ranges from manual winches for standard applications to winches driven by electric motors.

Whether you're travelling above or underground – Pfaff-silberblau Rail Technology plays a vital "behind the scenes" role to ensure trains are running safely and efficiently. Our product range includes mobile lifting jacks, lifting platforms, as well as special customized equipment and complete under-floor lifting systems. To cover all maintenance and repair work on bogies, wheel sets and vehicle chassis, Pfaff-silberblau has the optimal solutions for your workshop.

The brand Dorner

Precision conveyors – solving industrial, packaging, and sanitary conveyance needs. Founded in 1966 in Hartland, Wisconsin, Dorner is a global leader in the design, application, manufacturing, and integration of conveyor systems. Customers all over the world turn to Dorner to achieve improved efficiency, productivity, and a positive ROI.

Dorner is transforming conveyor automation with cutting edge solutions and best in class support. Our team of conveyance experts meet the challenges of various industries head on, and create unique conveyor systems to meet our customers needs.

Training

As a manufacturer, we have many years of experience in inspecting and repairing products in the field of lifting technology. We would like to pass on this knowledge to our customers and offer seminars in our training centre in Wuppertal seminars for “qualified person” in accordance with DGUV regulation 54 for winches, lifting and pulling equipment.

These are not only product training courses, but seminars that provide participants with up-to-date insider information and a solid knowledge of the handling of rope, lifting and slinging technology.

The most modern communication techniques, a portion of practice and optimally designed seminar materials guarantee a quick and lasting seminar success.

INFO

All seminars can also be held in-house if required!

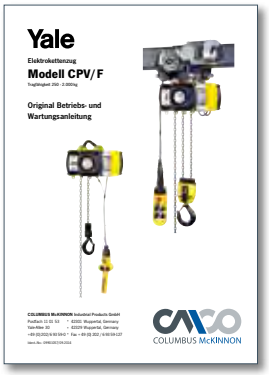

Certified security

You are in safe hands - Every unit is supplied with operating instructions, CE declaration of conformity resp. manufactures works test certificate, which confirms the perfect tested status of the product.

Additional documentation, e.g. spare parts manuals or maintenance and repair instructions are available on request or at our homepage:

www.cmco.com

Offering advice

Our qualified personnel are there for you around the globe at all our locations, as well as specialised dealers who provide competent know-how and service.

Business hours

Monday – Thursday	08:00 a.m. – 04:30 p.m.
Friday	08:00 a.m. – 03:30 p.m.

Shipping

Monday – Thursday	06:30 a.m. – 04:30 p.m.
Friday	06:30 a.m. – 03:00 p.m.

ISO 9001

CERTIFIED QUALITY MANAGEMENT SYSTEM

DIN EN ISO 9001

Columbus McKinnon Industrial Products GmbH manufactures world wide according to uniform, controlled standards of EN ISO 9001. This is a guarantee for our business partners that given standards in design and development, manufacturing, assembly and service are complied with.

Special documentation

Further inspections in form of 2.2 or 3.1 certificates according to EN 10204, GOST R certificates or specific pre-shipment inspections e.g. by DNV or GL can be carried out at cost on request.

Hoisting Equipment

Hoisting Equipment

Yale and Pfaff-silberblau hoisting equipment products are reliable and proven equipment renowned world-wide for applications in industry, trade and services.
The comprehensive range includes manual and powered hoisting equipment for a safe lifting and handling of loads ranging from 125 kg to 50000 kg. The products feature a long service life as well as easy and quick maintenance or repair.
Yale and Pfaff-silberblau hoisting equipment products comply with national and international regulations such as the EC Machinery Directive 2006/42/EC and corresponding supplements. In order to meet our high quality standard, the devices are subjected to an overload test in the factory and provided with a test certificate and operating instructions with a declaration of conformity or a manufacturer's declaration.

HOISTING EQUIPMENT

INFO

This user information presents a general review regarding the operation of hoisting equipment and does not substitute the existing operating instructions for the specific hoist product.

Lifting operations with hoisting equipment may be carried out by competent users (trained in theory and practice) only.

When operated correctly, our hoist products will offer the highest degree of safety in line with long life expectancy and avoid damage to the product and people.

Modification of delivery condition

Design and construction of the hoist may not be altered, e.g. by installation of outside supplied parts, bending, welding, grinding, removal of safety relevant components like locking devices, locking pins, safety latches etc.

Limitations of operation

Loading

Our hoists have been designed for lifting and transporting of loads. Some models (e.g. ratchet lever hoists) may also be used for pulling and lashing purposes, if admitted in the operating instructions. The indicated capacities refer to loading in straight line and must not be exceeded. Lifting media (e.g. lifting chain or rope) must not be slung over edges and must not be used for the attachment of the load!

Temperature

Hoists may normally be operated at ambient temperatures between -10°C up to +50°C.

These values are approximate and may deviate from the specific givings of the hoist product. The accurate data are given in the current operating instructions. Special models are available on request for higher or lower temperature ranges.

Attention: At temperatures below 0°C the brake should be checked for freezing. (Check lifting function prior to starting work and refer to “Inspection prior to initial operation”).

Shock loading

The indicated capacities are based on shock-free loading of the hoist. Light bumps as occurred during lifting and lowering as well as transporting of load are admitted. Heavier shock loadings, e.g. falling of the load, are strictly forbidden!

Chemicals

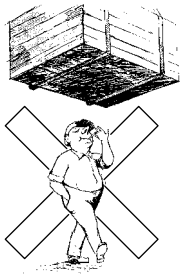

Hoists and attachments may not be operated without hesitation in the area of chemicals or chemical vapours – consult our specialists for advice. Hoists which have been subject to chemicals or vapours must be taken out of service and inspected by us.

Transport of people

Transport of people with hoisting equipment is generally forbidden! Transport of people may only by carried out with specially authorized products (e.g. Yaletrac, Mtrac).

Operation in danger zones

Lifting or transport of loads must be avoided while personnel are in the danger zone.
People are not allowed to pass over or under a suspended load.

Electrical hazards

Load carrying hoist components (e.g. load chain) must not be subject to electric current and must never be used as a ground connection during welding. Further electrical hazards, e.g. with powered hoists, are indicated in the specific operating instructions!

Electric connections may only be performed by authorized persons resp. companies!

INFO

You will find the General Terms and Conditions at the end of the catalogue.

Please note the information on our training courses on page 4.

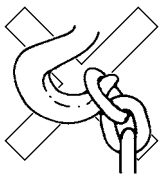

INFO

Application advices

- Hoists must always be in perfect condition and provided with a legible identity plate.
- Prior to starting work, the hoist including load carrying devices, equipment, supporting structure and suspension must be inspected for obvious deficiencies and failures. In addition, the function of the brake and the correct attachment of hoist and load have to be checked by carrying out a short work cycle of lifting/ pulling or tensioning and releasing.
- Inspect the load chain for sufficient lubrication and visually check for external defects, deformations, superficial cracks, wear or corrosion marks.
  A defective chain must be replaced prior to operation of the hoist.
- Units equipped with two chain falls should be inspected for twisted or kinked chains prior to being put into operation. The chains of multiple fall hoists may be twisted if the bottom block was turned over.

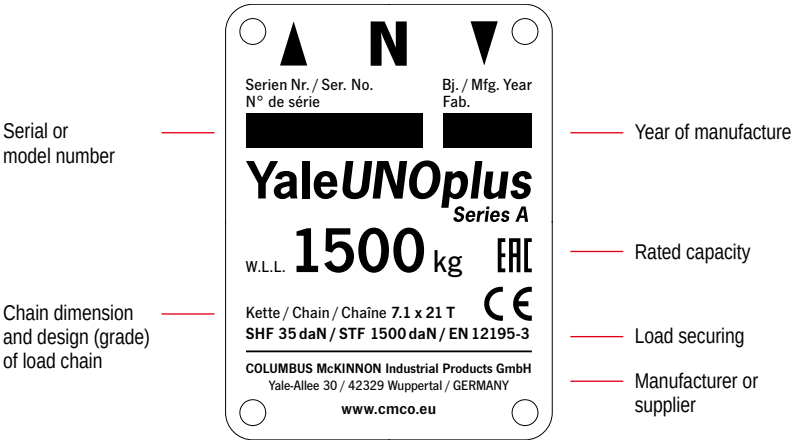

- Inspect top and bottom hooks for deformations, damage, cracks, wear or corrosion marks. A safety latch must be available and work effectively.
- Hoists with obvious defects and units which have been subject to overload or other dangerous influences have to be taken out of service and may only be operated after test and repair if so required.
- When selecting the proper product, make sure that the hoist is suitable to accept transportation, suspension, type of lashing devices and lashing points safely and without unintended movement (e.g. slipping).
- Load chains must not be used in kinked or knotted condition.
- The load must always be seated in the saddle of the hook.
  Never attach the load on the tip of the hook. This applies to top and bottom hooks.

- The operator must ensure that the load is attached in a manner that does not expose himself or other personnel to danger by the hoist, chain(s) or the load.
- During lifting operations the load and suspension hook of the hoist must be perpendicular to the load center to prevent pendle motion of the load!
- The operator may start moving the load only after it has been attached correctly and all personnel are off the danger zone.
- Before lifting make sure that the load can move freely.
- After lifting or tensioning, a load must not be left unattended for a longer period of time.
- Chain stops, slipping clutches etc. are overload protection devices and may not be used as regular load limiters.
- Do not throw the hoist down. Always place it properly on the ground.

Labelling (Example)

yale

Maintenance and repair

- To ensure safe operation, all hoisting equipment must be subjected to regular inspections according to the maintenance instructions given by the manufacturer.
- Hoists which are due for maintenance (normally once per year, unless adverse working conditions dictate shorter periods) or products with obvious defects may be returned to us for inspection and repair.
- Inspections and tests must be performed by competent persons or specialist workshops that use original spare parts!

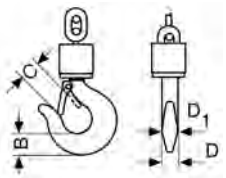

Inspections

- According to German laws and standards all hoisting equipment must be subjected to a mandatory inspection at least once a year. The inspection must be performed by a competent person.
- On building sites hoists have to be inspected every time before operation.
- Hoist and supporting components have to be cleaned prior to inspection. The cleaning procedure must not cause chemical damages (e.g. no acid-embrittlement). Do not expose the hoist and supporting components to unallowed temperatures by e.g. flame cleaning avoid concealment of cracks and excessive material loss (sand blasting).
  We shall be pleased to consult you in this respect. Please submit your hoists for inspection in clean condition. This will reduce inspection costs considerably!

Criteria for hoist disposal

Hoists must no longer be operated if e.g.:

- The identification (identity plate) is missing or illegible.
- Security relevant components like brake, slipping clutch, ratchet pawls etc. do not properly function any longer.
- Housing, control units and suspension of the hoist present obvious deficiencies, i.e.
  - cuts, grooves, cracks
  - excessive corrosion
  - staining due to heat
  - signs of subsequent welding resp. spatters which cannot be easily removed and leave stains
- Ropes show breakage of wires resp. bruises (criteria for disposal of ropes are given in classification DIN 15020), damages to the rope sleeve and similar failures.
- The load chain presents twisted or distorted links or shows an elongation of 5 % of one chain link or a reduction in diameter of more than 10 % (average of two measurings (longitudinal and transverse) compared to the nominal diameter).
- The opening (C) of suspension and/or load hooks is stretched by more than 10 % compared with the nominal dimension, or if the hook mouth shows a wear of more than 5 % of either dimension B or D.

- Detrimental impacts by e.g. overloading, shock loading, chemical influences or heat have occurred, the hoist may only be returned to service after careful inspection and repair.

INFO

C 85
Ratchet lever hoist with roller chain

Capacity 750 - 3000 kg

D 85
Ratchet lever hoist with link chain

Capacity 750 - 10000 kg

Almost unlimited applications in maintenance, mining, construction, steel fabrication, shipbuilding and utility work. Ideal for moving and positioning heavy machines and securing heavy loads, simplifies setting pipes etc. in manholes and trenches.

Features

- Enclosed housing with housing cover, handlever and bottom block made from high tensile white malleable cast iron for overall rugged construction.
- Wet painting colour code RAL 1023.
- The graphite cast iron load sheave for the link chain has precision machined chain pockets for accurate fit and durability of the load chain.
- The roller chain sprocket is made from heat treated chromium-molybdenum steel with precision machined teeth to ensure smooth chain movement.
- Alloyed steel link chain with zinc-plated, in accordance with national and international standards and regulations.

We are pleased to send you our new Atex catalogue in PDF format.

INFO

Since 1936, the Velbert factory has built over 1 million units!

All ratchet lever hoists with a capacity exceeding 750 kg can be used for load attachment according to EN 12195.

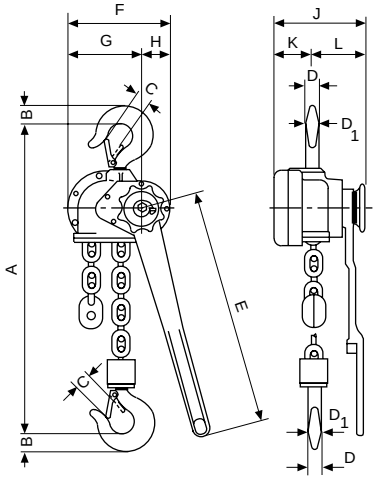

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

Yale*ERGO 360*®

Ratchet lever hoist

Capacity 750 - 9000 kg

Redefining lever-operated hoists, the Yale*ERGO 360*® features the revolutionary crank handle that allows for efficient operation in both lifting and pulling applications. Ergonomically designed for increased safety, the patented Yale*ERGO 360*® lets the operator work up to 12 times faster and with as much as 30 % less pull force than with conventional ratchet lever tools.

Features

- The lightweight, high-strength aluminium housing with powder coating and high-quality bearings offer a long service life even with intensive use and rough operating conditions.
- The hand lever with integrated snap crank ensures ideal power transmission and enables a 360° working range. This increases productivity and reduces the risk of injury.
- Display of the operating direction or free chaining in the viewing window of the hand lever.
- The covered load pressure brake remains free of dirt and moisture, which enables precise load positioning.
- Standard free chaining device to quickly attach the load or to pull the chain through the hoist in both directions.
- Chain guide and stripper are made of robust cast iron and zinc plated to protect against corrosion.
- Alloyed steel link chain with zinc-plated resp. yellow chromated finish, in accordance with national and international standards and regulations.
- Rotatable, forged top and load hooks and casted safety latches provide reliable and safe load suspension. The screwed top hook cross bars and bottom blocks are allowed for easy maintenance.

Optional

- All Yale*ERGO 360*® units can be equipped with an overload protection device in the form of a slip clutch which is factory preset to approx. 25 % ± 15 % overload.
- Shipyard hooks available for 1500 kg and 3000 kg units.

PATENTED

HAND LEVER WITH RETRACTABLE CRANK

DESIGNED FOR OPTIMAL EFFICIENCY & SAFETY

Capacity 750 kg

Shortest hook space (A min.) 320 mm

Handle pull at WLL crank lever handle operation 20 daN

Weight 6.7 kg

Capacity 1500 kg

Shortest hook space (A min.) 375 mm

Handle pull at WLL crank lever handle operation 24 daN

Weight 9.6 kg

Capacity 3000 kg

Shortest hook space (A min.) 445 mm

Handle pull at WLL crank lever handle operation 35 daN

Weight 17.2 kg

Capacity 6000 kg

Shortest hook space (A min.) 563 mm

Handle pull at WLL crank lever handle operation 37 daN

Weight 28.9 kg

Capacity 9000 kg

Shortest hook space (A min.) 695 mm

Handle pull at WLL crank lever handle operation 41 daN

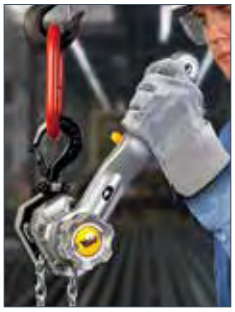

Weight 49.5 kg

When folded out, the lever handle can serve as a carrying grip for easy transport. Simply attach the end stop to the hook and slip the hook onto the crank handle.

Unique body design allows the Yale*ERGO 360*® to lay flat to minimize tipping or slipping during operation.

The Yale*ERGO 360*® in conventional use.

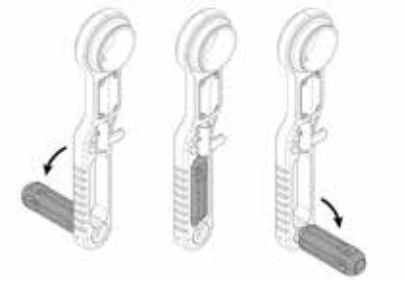

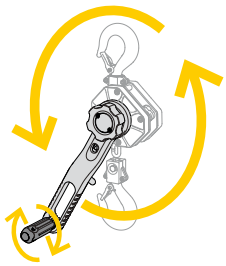

The Yale*ERGO 360*® in use of the extended crank handle.

DISTINCTIVE CLICKING SOUND

ENSURES THE HANDLE IS LOCKED INTO POSITION

To return handle to upright position, simply pull the handle outward and snap into place inside the lever.

The hand lever with integrated crank

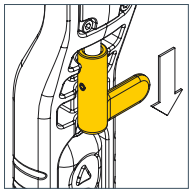

- 360° rotation increases efficiency, allowing operators to work up to 12 times faster than with a conventional ratchet lever hoist.
- Requires 30 % less pull force to operate.
- Easy and effective operation from any angle with handle that folds down and locks into position on either side of the lever.
- Design keeps the operator's body aligned with the load chain, reducing the risk of the twist effect – when a hoist twists around the chain.
  No need to use a second hand to stabilize the hoist.
- Operator can securely grip the grooved, no-slip handle.
- Crank handle made of durable polyamide with a heavy-duty steel core for rugged use.

SAFE & SECURE

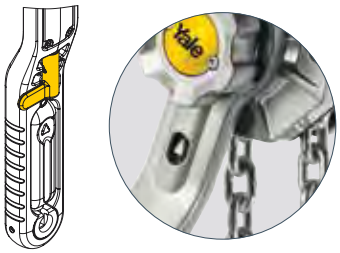

SELECTOR LEVER LOCKS IN PLACE TO PREVENT ACCIDENTALLY SWITCHING.

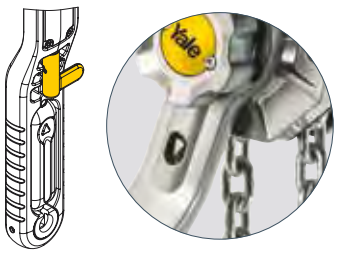

Pull down on the selector lever to unlock it, turn it to the desired direction, and release it into the locking position.

Convenient directional indicator

Easy-to-use, highly visible directional indicator window located in the handle clearly shows the operating direction as LIFTING (▲), LOWERING (▼) or NEUTRAL (N).

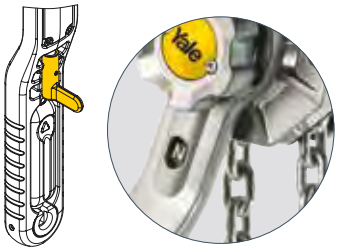

Simple & smooth free chaining device

Quick positioning of the unloaded chain - even with one-handed operation.

In this operating mode, the chain can be pulled through the unit by hand in both directions in order to attach it more quickly.

The free chaining device is activated by moving (shifting) the lever to the neutral position (N).

Optional:

Shipyard hooks
for capacities 1500 and 3000 kg.

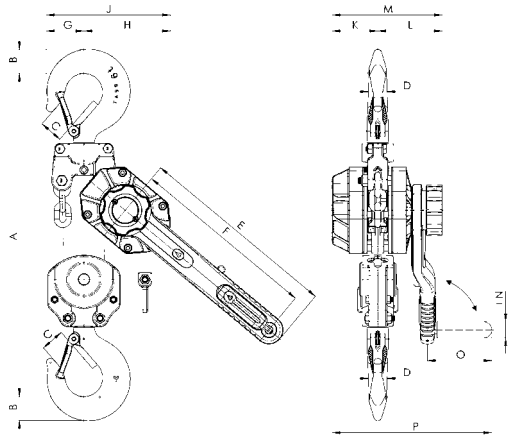

Based on a special design the shipyard hooks can be fixed to avoid slipping (resp. on steel plates which were braced for welding).

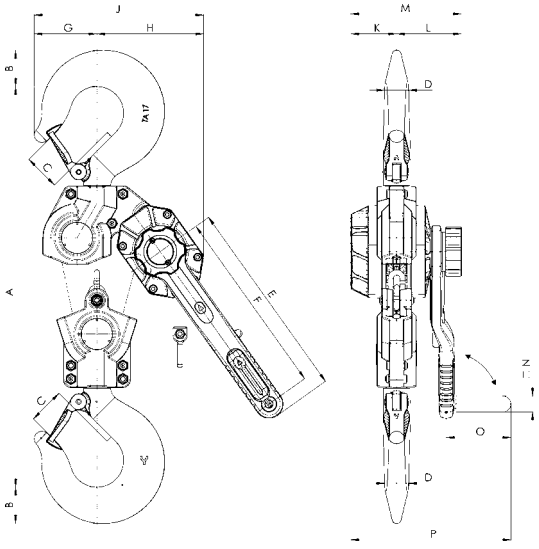

Yale*ERGO 360*®, 750 - 3000 kg, single fall

360°

Yale*ERGO 360*®, 6000 kg, double fall

Yale*ERGO 360*®, 9000 kg, three fall

Yale*ERGO 360® UT* Utility!

Ratchet lever hoist with safety gear

Capacity 1500 - 9000 kg

The Yale*ERGO 360® UT* is now also redefining the world of hoists for overhead line construction. The automatically acting safety gear, with a pending patent, once more increases the safety of use.
Here, too, the ergonomic and safety enhancing design of the device and the revolutionary, patented hand lever enable efficient work at any angle, for lifting and pulling applications.

Features

AUTOMATICALLY ACTING SAFETY GEAR
The Yale*ERGO 360® UT* has a unique, automatically locking safety device to prevent a sudden drop (patent pending). It guarantees permanent monitoring and is active during operation as well as during inactive moments without the user having to activate it.
In case of emergency, i.e. after failure of the load pressure brake and consequently exceeding the specified speed, the safety gear will automatically activate.
It safely absorbs the load, preventing the creation of larger dynamic forces which could cause further damage. Due to its design, the device remains in a safe state even in the event of an error (e.g. rusted ratchet pawl, broken springs or other influences such as basic corrosion or dirt).

EXCELLENT CORROSION PROTECTION
A housing optimized for outdoor applications (incl. water drainage holes on all sides) prevents a build up of water and the influence of moisture in extreme conditions (e.g. rain, fluctuations in temperature). External components such as the chain guide and the stripper are zinc plated. Some of the internal moving parts such as the drive pinion, the ratchet pawl, the load chain wheel and the ratchet are MKS coated (zinc flake coating).

Optional

CHAIN STOP & CHAIN CLAW*
Optionally, the devices can be equipped with our proven and tested YKST chain stop or the KKL chain claw.

*The usage is based on each country's specific regulations.

PATENTED
AUTOMATICALLY ACTING SAFETY GEAR
DESIGNED FOR OPTIMAL EFFICIENCY & SAFETY
In accordance with EN 1808 -
Safety requirements for suspended access equipment, 8.9.2

In cooperation with BGHM Berufsgenossenschaft Holz und Metall and BG ETEM Energie Textil Elektro Medienerzeugnisse

Extract from BG ETEM statement:

"This is to confirm that the integrated safety gear in the ratchet lever hoist Yale*ERGO 360® UT* makes organizational measures such as the parallel use of several devices, the additional insertion of slings or the use and repositioning of an additional chain stopper obsolete.

In accordance with the S-T-O-P principle, the additional safety gear represents a technical solution that is superior to the organizational solutions used to date."

STRUCTURE & FUNCTIONALITY OF THE AUTOMATIC SAFETY GEAR

PATENTED

AUTOMATICALLY ACTING SAFETY GEAR

DESIGNED FOR OPTIMAL EFFICIENCY & SAFETY

In accordance with EN 1808 -
Safety requirements for suspended access equipment, 8.9.2

REQUIREMENTS FOR THE REDUNDANT SAFETY GEAR
in accordance with EN 1808 - Safety requirements for suspended access equipment, 8.9.2

- shall automatically engage in the event of overspeed (more than 0.5 m/s)
- the stopping distance must not exceed 500 mm
- shall be capable of being reset
- shall be capable of being tested
- shall permit lifting at any time

FUNCTION NORMAL OPERATION

Speed < 0.5 m/s

The rocker pawl moves continuously along the contours of the cam disc and lock disc.

FUNCTION ABSORPTION

Speed > 0.5 m/s

As soon as the speed exceeds 0.5 m/s, the rocker pawl engages the lock disc and safely absorbs the load.

INFO

In any cases the load is caught exceeding a speed of 0.5 m/s.

Speeds below 0.5 m/s (corresponds to 2 km/h) are not safety relevant according to EN 1808.

Extensive corrosion protection measures of the individual components ensure the proper functioning of the safety gear even during long-term use under poor weather conditions.

INFO

All ratchet lever hoists with a capacity exceeding 750 kg can be used for load attachment according to EN 12195.

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

AL Ratchet lever hoist

Capacity 750 - 3000 kg

Its low own weight is an advantage. When the hoist has to be frequently carried over longer distances to different assignments. This universal ratchet hoist should not be missing in any service truck.

Features

- The enclosed housing, hand lever and hand wheel are made from high quality aluminium.
- Low effort on hand lever.
- Due to precise needle bearings the hoist can be operated with little effort.
- Standard free chaining device to quickly attach the load or to pull the chain through the hoist in both directions.
- The chain guide is cast into the body to ensure fault-less chain movement.
- Alloyed steel link chain with zinc-plated resp. yellow chromated finish, in accordance with national and international standards and regulations.

Yale *UNOplus* Series A

Ratchet lever hoist

Capacity 750 - 6000 kg

The *UNOplus - Series A* ratchet lever hoist is the result of further technical development of the *UNOplus*, which has proven itself over many years.
The versatile tool for lifting, pulling and securing of loads is characterised by its compact design, robust stamped steel construction and the smoothly running free chaining device. The further reduced weight optimizes operation, makes the application even more comfortable and the UNOplus - Series A to a convenient, versatile device.

Features

- Due to optimized gearing and improved bearings in the housing cover a minimum effort is required to operate the short hand lever.
- Automatic screw-and-disc type load brake with corrosion protected components.
- Standard free chaining device to quickly attach the load or to pull the chain through the hoist in both directions.
- Robust chain guide rollers eliminate fouling and jamming of chain on the load sheave.
- Robust chain end stop
- Comfortable rubber grip provides for extra protection against slippage.
- Alloyed steel link chain with zinc-plated resp. yellow chromated finish, in accordance with national and international standards and regulations.
- Forged suspension and load hooks are made from non-aging, high tensile steel and fitted with robust safety latches.

COMPACT & TRANSPORTABLE

UNIVERSALLY USABLE & USER FRIENDLY

LIGHTWEIGHT & CAN BE USED IN THE SMALLEST AREAS.

INFO

All ratchet lever hoists with a capacity exceeding 750 kg can be used for load attachment according to EN 12195.

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

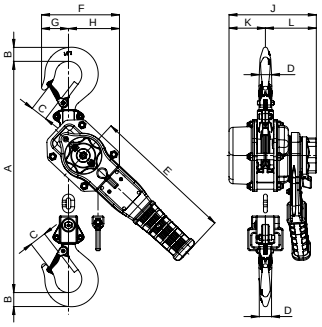

We are pleased to send you our new Atex catalogue in PDF format.

Yale *UNOplus*
ARCTIC EDITION ***Series A***

Ratchet lever hoist

Capacity 750 - 6000 kg

With the Yale *ARCTIC EDITION* the field of application of the tried and tested Yalelift 360 manual hand chain hoist can now be expanded to applications under extreme low temperatures.

Care was taken to ensure that all functions, especially its innovative 360° hand chain guide, function optimally and safely even under extreme temperatures. The materials and lubricants used were adapted to the requirements and tested and certified in complex low-temperature test procedures.

This allows the user to work safely and productively with the Yalelift 360 even at temperatures down to -40°C, whereas standard hoists without these measures may only be used down to -20°C (DIN EN13157 Cranes - Safety - hand-operated cranes).

In addition to static tests, dynamic low-temperature tests were also carried out to rule out malfunctions and material failure.

We can confirm the user's suitability with a certificate.

INFO

Standard hoists according to EN13157
(cranes - safety - hand operated cranes)

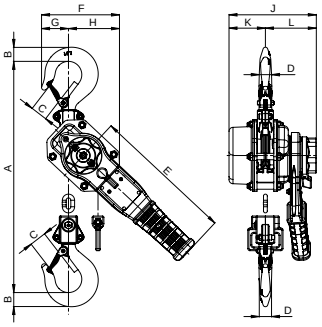

5.1.12 Temperature
Hand chain blocks and their components shall be capable of operating within an ambient temperature range of -10°C to +50°C unless another temperature range is agreed between the manufacturer and the purchaser. Standard hoist products from CMCO are suitable for a temperature range of -20°C to +50°C!

Yalehandy

Ratchet lever hoist

Capacity 250 - 500 kg

The extreme low own weight and the very compact design make the hoist easy to use even in confined working conditions. Due to the multitude of application possibilities e.g. in industry, trade and service this ratchet lever hoist is indispensable.

Features

- The enclosed design protects the internal parts from contamination.
- The short handlever is fitted with an ergonomic rubber grip.
- All parts of the disc type load brake are manufactured from high quality materials and are corrosion protected.
- Standard free chaining device to quickly attach the load or to pull the chain through the hoist in both directions.
- Alloyed steel link chain with zinc-plated resp. yellow chromated finish, in accordance with national and international standards and regulations.
- Forged suspension and load hooks are made from non-aging, high tensile steel and fitted with robust safety latches.

INFO

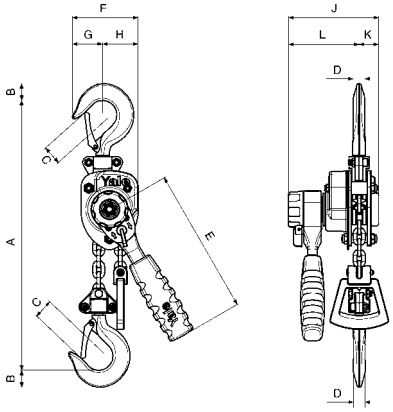

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

Silverline HZ S
Ratchet lever hoist

Capacity 750 - 6000 kg

The Silverline HZ S is designed and built for safe and efficient operation.
A hoist with low maintenance - at an economical price.

Features

- Strong bolts between side plates and housing cover ensure increased stability.
- Chain guide rollers eliminate fouling and jamming of chain.
- Bearings for side plates permit a long service life.
- Zinc-plated load chain as standard.
- Forged suspension and load hooks are made from high tensile steel and fitted with safety latches.

Silverline Stira S
Hand chain hoist

Capacity 500 - 5000 kg

The hand chain run is just as smooth as on the models Yale*lift 360* and VS*III*, but the Silverline Stira S series is a low-priced alternative to the high-quality units.

Features

- Strong bolts between side plates and housing cover ensure increased stability.
- Chain guide rollers eliminate fouling and jamming of chain.
- The design prevents the hand chain from jamming and jumping off.
- Bearings for side plates permit a long service life.
- Zinc-plated load chain as standard.
- Forged suspension and load hooks are made from high tensile steel and fitted with safety latches.

INFO

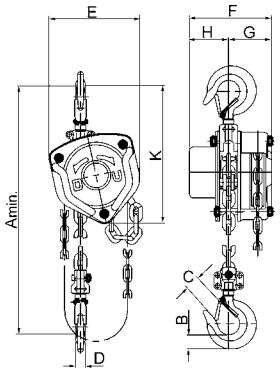

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

Yale *VS III*

Hand chain hoist

Capacity 250 - 5000 kg

Extremely low overall height allows optimal use of available headroom. Fully enclosed stamped steel housing allows also outdoor use. The improved hand chain guide prevents canting or jamming of the hand chain, leading to a smooth running of the chain. High quality bearings on side plates, gearbox and load chain sheave ensure smooth operation of load chain and drive pinion. Optimized hand forces set standards for easy operation. The hooks are equipped with robust safety latches and can rotate 360°.

Features

- Strong bolts between side plates and housing cover and the reinforced hand wheel cover ensure increased stability.
- Precision machined guide rollers ensure smooth running of the load chain.
- High quality bearings for gearbox, side plates and load chain sheave permit a long service life.
- Zinc-plated and yellow-chromated brake parts and guide rollers ensure increased corrosion protection.
- Zinc-plated load chain as standard for added corrosion protection.

Optional

- Overload protection device (from 500 kg available)
- Chain container

Load chain sheave with needle bearing

Side plate with ball bearing

Housing cover with ball bearing

Yale *VS III*

Hand chain hoist

Capacity 10000 - 50000 kg

Having long years of experience with this solid product, we decided to extend the VS*III* series by the load capacities 10 t, 20 t, 30 t and 50 t.

In order to serve all industries (even the paper- or the ship industry), the VSIII lifts the loads very sensitively, as the components and construction parts have been positioned very precisely.

Features

- Strong bolts between side plates and housing cover and the reinforced hand wheel cover ensure increased stability.
- Precision machined guide rollers ensure smooth running of the load chain.
- High quality bearings for gearbox, side plates and load chain sheave permit a long service life.
- Zinc-plated and yellow-chromated brake parts and guide rollers ensure increased corrosion protection.
- Zinc-plated load chain as standard for added corrosion protection.

Optional

- Overload protection device
- Chain container on request

SERIES EXTENSION

NOW WITH HIGH SWL!

30000 - 50000 kg

INFO

To avoid bruising or injuries, the chain inlet as well as the top hook connection is covered in protective material.

HTG trolleys for hand chain hoists upwards 10000 kg
please see pages 54 - 57.

SERIES EXTENSION

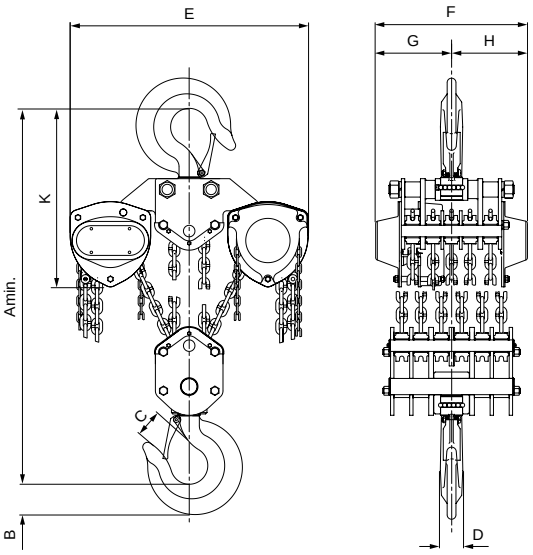

NOW WITH HIGH SWL!

30000 - 50000 kg

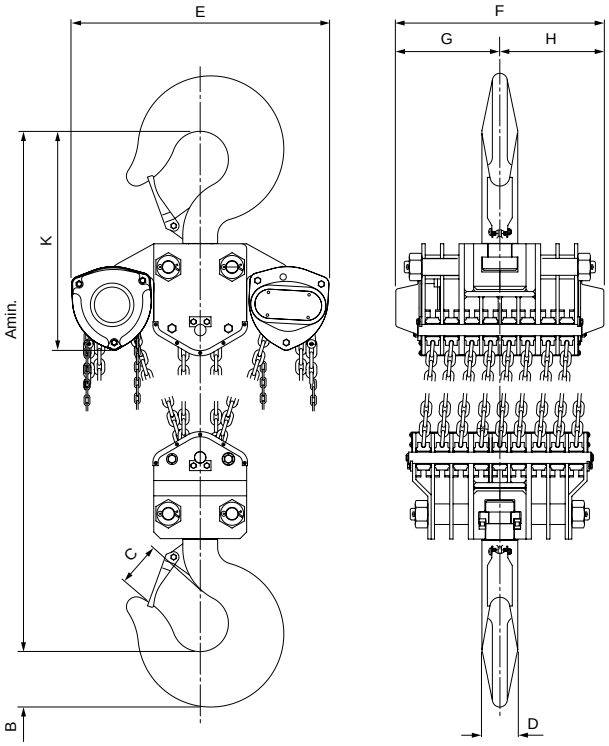

VS*III*, 20000 kg, eight chain falls

VS*III*, 30000 kg, twelve chain falls

VS*III*, 50000 kg, eighteen chain falls

Rotating hand chain guide!

Yale*lift 360*

Hand chain hoist

Capacity 500 - 10000 kg

Areas of operation as well as operator conditions have been improved far beyond those of a classical hand chain hoist.

Features

- The enclosed robust stamped steel housing protects all internal components even in the toughest conditions.
- The extremely low headroom allows maximum use of the lifting height.
- The revolutionary 360° rotating hand chain guide allows the operator to work from virtually any position, in confined spaces or above the load. The Yalelift can even be operated from the side of the load which also makes it possible to use the hoist for horizontal pulling or tensioning. Due to the additional flexibility, the operator is no longer forced to work in the danger zone near the load.
- The brake system is extremely quiet and guarantees operational safety and improved serviceability due to omission of the vulnerable ratchet pawls. All parts are made of high quality materials, additionally zinc-plated or yellow-chromated to increase corrosion prevention.
- Chain guide and gearbox are almost totally enclosed. Even under the toughest conditions the internal gearbox remains protected.
- The hardened load sheave with four precision machined pockets ensures accurate movement of the load chain.
- The surface protected zinc-plated alloy steel load chains fulfil all requirements of current national and international standards and regulations. They are optimally matched to the load sprocket and ensure safe and long-lasting operation of the unit.
- Forged load and suspension hooks that yield under overoad instead of breaking, are made of high tensile steel. The hooks are fitted with robust safety latches and rotate 360°.

Optional

- Adjustable overload protection device.
- Chain container
- Corrosion resistant version.

Yale*lift 360*

Hand chain hoist, 20 t

Capacity 20000 kg

In spite of its high capacity, the Yale*lift 360* 20 t features a compact design.

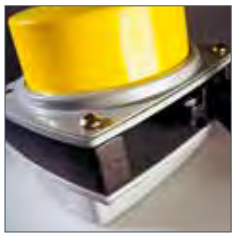

Features

- All components are made of high quality materials, some components are zinc-plated or yellow-chromated for added corrosion protection. This ensures that also heaviest loads are held reliably.
- The enclosed robust stamped steel body resists in the toughest conditions and allows outside operation.
- The hardened load sheave with five precision machined pockets ensures accurate movement of the load chain.
- The low headroom (hook-to-hook dimension 1065 mm) allows maximum use of the lifting height.
- The Yale*lift 360* 20 t is equipped with six chain falls only which results in higher speed and lower weight.

Optional

- Adjustable overload protection device.
- Chain container
- Corrosion resistant version.

The robust stamped steel housing with four stay bolts is resistant to the toughest working conditions.

ARCTIC EDITION

Hand chain hoist

Capacity 500 - 20000 kg

As with the Yalelift 360, we are also introducing the Yale UNOplus Series A in *ARCTIC EDITION*, a hand lever hoist for extreme applications.

It was ensured that all functions even under extremes temperatures work satisfactory. Materials used for this purpose as well as lubricants adapted to the requirements and tested and certified in complex low-temperature test procedures, which means that the user can work safely and productively with the YaleUNOplus Series A, allows temperatures down to -40°C.

In addition to static tests, dynamic low-temperature tests were also carried out to rule out malfunctions and material failure.

We can confirm the user's suitability with a certificate!

Yale*lift 360*

YLIT – Hand chain hoist with integrated push or with integrated geared trolley

Capacity 500 - 20000 kg

The combination of the Yale*lift 360* with a low headroom manual trolley provides even more flexibility in the application.

Features

- All units of this series up to a capacity of 3000 kg are built with a single chain fall, the min. headroom (Dim. A) has been further reduced. Ideal for applications with low ceilings and limited headroom.
- The approved and almost stepless adjustment system of the trolley enables the simple and quick assembly due to adjusting nuts.
- Trolleys up to 5 t capacity are offered for two beam ranges; range A for a flange width of up to 180 mm is standard and covers approx. 80 % of all applications. Conversion to range B for beam width up to 300 mm can be easily accomplished.
- The trolley wheels are designed for a max. beam profile incline of 14 % (DIN 1025 - part 1), excellent rolling features are guaranteed by pre-lubricated, encapsulated ball bearings.
- Anti-drop and anti-tilt devices as standard.

Optional

- Adjustable overload protection device.
- Chain container
- Rubber buffers
- Corrosion resistant version.
- Beam locking device to secure the unloaded hoist with integrated trolley in a fixed position on the beam (park position e.g. on ships).

YLLH – Hand chain hoist with integrated push or with integrated geared trolley (low headroom)

Capacity 500 - 10000 kg

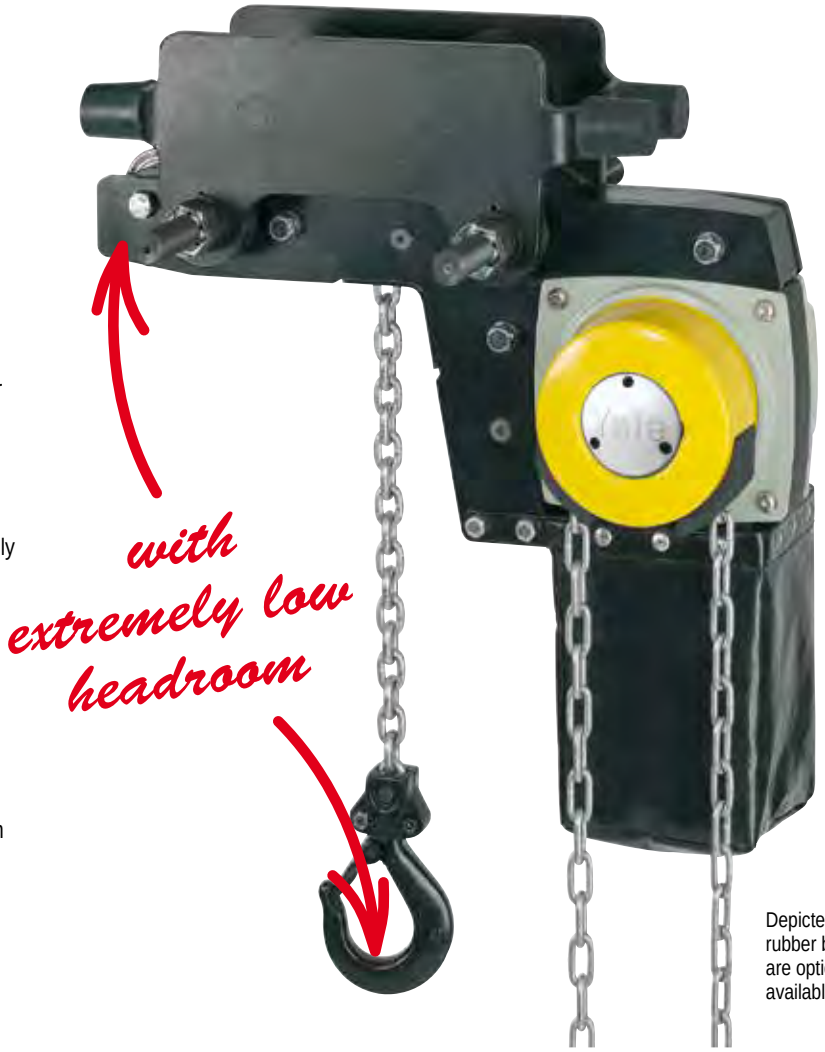

The hand chain hoist Yale*lift* LH with integrated low headroom manual trolley is the consequent further development of the Yale*lift* IT. Wherever an even smaller headroom is essential, the Yale*lift* LH is the ideal choice.

Features

- The specially developed chain reeving system and chain guide allow the bottom block to be pulled laterally to the hoist even further up and almost against the beam flange.
- The integrated design of the innovative Yale*lift* LH uses the same manual trolleys as incorporated in the Yale*lift* IT series.
- All units of this series up to a capacity of 3000 kg are built with a single chain fall.
- The approved and almost stepless adjustment system of the trolley enables the simple and quick assembly due to adjusting nuts.
- Trolleys up to 5 t capacity are offered for two beam ranges; range A for a flange width of up to 180 mm is standard and covers approx. 80 % of all applications. Conversion to range B for beam width up to 300 mm can be easily accomplished.
- The trolley wheels are designed for a max. beam profile incline of 14 % (DIN 1025 - part 1), excellent rolling features are guaranteed by pre-lubricated, encapsulated ball bearings.
- The low headroom version of the Yale*lift* IT is adjustable to fit a wide range of beam profiles (e.g. INP, IPE, IPB).
- Anti-drop and anti-tilt devices as standard.

Optional

- Adjustable overload protection device.
- Chain container
- Rubber buffers
- Corrosion resistant version.
- Beam locking device to secure the unloaded hoist with integrated trolley in a fixed position on the beam (park position e.g. on ships).

Depicted rubber buffers are optionally available!

Yale*MINI 360*

Hand chain hoist

new!

Capacity 250 - 500 kg

The smallest of the Yale hand chain hoists has a compact design and a hand chain wheel cover that allows a rotation of 360°. This ensures a high level of safety, as it is possible to work outside the danger zone.

The housing of the new YaleMINI 360 is made of die-cast aluminium, which makes it a very lightweight hand chain hoist. Due to the low weight, there are countless possible applications, e.g. assembly work in industry, car repair shops, crafts etc.

Features

- With the 360° rotating hand chain guide, a very large work area can be covered, this makes it possible for the operator to stand clear of the danger zone.
- Compact design, light weight, easy to carry.
- Made of die-cast aluminium.
- Due to the compact housing, all internal parts are protected. The device can therefore also be used outdoors or in rough environments.
- The load pressure brake complies with all technical regulations, thus the load is held in any position.
- The standard equipment includes forged lifting and load hooks made from age-resistant high-alloy tempered steel, which open when overloaded without breaking. The hooks can be rotate through 360 degrees and are fitted with robust safey catches.
- The galvanized steel load chain complies with all applicable national and international regulations.
  The optimal fit to the load chain wheel ensures safe and long lasting operation.

360°

EXPERIENCE THE ADVANTAGE OF 360°

Due to its size, the YaleMINI 360 fits into every tool box and supports the operator in his work.

INFO

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

Capacity 250 kg

Capacity 500 kg

Lifting application

Pulling application

Corroded Yalelift with integrated trolley
– still functional after 9 years in use

MKS coated hand chain hoist Yalelift 360 with integrated trolley and buffers.

This is the standard version with the classification Atex Basic. However, the unit can also be used in non-explosive areas without hesitation.

Corrosion protection

What does corrosion actually mean?

Corrosion is a term from the Latin “corrodere” and means to decompose or eat away and is, from a technical point of view the reaction of a material with its environment. In popular speech, metals are also referred as “rusting”.

How does corrosion occur?

Nowadays, metals are exposed to a wide variety of environmental influences, such as climate and air pollution. This can change their structure. Especially with metals such as iron or steel, oxide formation has a negative effect on the material. Rust develops as a product of corrosion.
In untreated or damaged areas, humidity can hit the metal surface and thus attack it. The corresponding area begins to corrode to the point of rusting through completely.

Types of corrosion

Technically speaking, types of corrosion are classified according to material, cause and appearance and also according to where they occur.
The standard DIN EN ISO 8044 defines 37 different types of corrosion.
One of the best-known types of corrosion is contact corrosion, in which an electrochemical reaction between two different metallic materials in conjunction with e.g. humidity leads to corrosion of the less noble metal.

Other types of corrosion can be:

- pitting corrosion,
- surface corrosion,
- vibration corrosion cracking,
- gap corrosion, etc.

Areas of application

Corrosion-protected equipment with galvanised load or hand chains or rust and acid-resistant chains should be used wherever increased demands are made on corrosion resistance are required. Typical applications are in the food industry (e.g. dairies, slaughterhouses, etc.), the chemical industry (e.g. paper industry, colouring), agriculture or wastewater treatment plants.

Table of contents >>

Preventive corrosion protection

To prevent early corrosion, all our products are coated. This coating varies depending on the model and is carried out in the form of a wet coating, powder or MKS coating.

For specifications on corrosion protection, the DIN EN ISO 12944 series of standards is used in many cases. This series of standards is used for steel structures or structures whose components are made of unalloyed or low-alloyed steel with a thickness of at least 3 mm and which are designed in accordance with a structural safety designed.

We can only base our products on the corrosivity categories contained in this series of standards (see table below). For some models, increased corrosion protection can be achieved by applying additional or thicker coatings. You will find a detailed list on the next page.

INFO

Corrosion causes annually in Germany alone 75 billion € damage!

Corrosion protection classes in accordance to DIN EN ISO 12944

Atmospheric-Corrosivity categories, Corrosion stress	Corrosivity	Corrosion protection period	Protection period in years	Examples of typical environments
C1 very low	very low low-aggressive inside	short (L) medium (M) long (H) very long (VH)	up to 7 7 to 15 15 to 25 > 25	Only indoor rooms, insulated buildings 60 % relative humidity
C2 low	low moderate aggressive outside/inside	short (L) medium (M) long (H) very long (VH)	up to 7 7 to 15 15 to 25 > 25	Slightly polluted atmosphere, dry climate, e.g. rural areas
C3 medium	moderate low-aggressive outside	short (L) medium (M) long (H) very long (VH)	up to 7 7 to 15 15 to 25 > 25	City and industrial atmosphere with moderate SO pollution or moderate climate
C4 high	high moderately aggressive outside/inside	short (L) medium (M) long (H) very long (VH)	up to 7 7 to 15 15 to 25 > 25	Industrial and coastal atmosphere with moderate salt pollution
C5 very high	very high aggressive outside/inside	short (L) medium (M) long (H) very long (VH)	up to 7 7 to 15 15 to 25 > 25	Industrial atmosphere with high relative humidity and aggressive atmosphere as well as coastal atmosphere with high salt content
CX extremely	very high maritim outside/inside	short (L) medium (M) long (H) very long (VH)	up to 7 7 to 15 15 to 25 > 25	Offshore areas with high salt content, industrial areas with extreme humidity and aggressive atmosphere as well as subtropical and tropical atmosphere

MKS Coating

The MKS coating (micro corrosion protection system) is a coating of zinc and aluminium lamellae which primarily protect the unit against corrosion. Even thin layers - typically a system consisting of base and top coat - can achieve high protective effects against base metal corrosion (red rust).

This MKS coating is used on the models Yale*lift* 360 Atex and HTP/G Atex trolleys for use in explosion-protected areas, but also, for example in wastewater treatment plants.

Powder coating

This is a coating process in which a metal surface is coated with powder. A typical coating line consists of surface pre-treatment (cleaning and/or application of a conversion coating), intermediate drying, electrostatic coating zone and dryer. The workpieces are transported via a transport system. The powder coatings produced typically have layer thicknesses between 60 and 120 µm. However, depending on the application and surface characteristics, the coating thickness can also be above or below this range.

Wet painting

Varnish is a liquid coating material. This material is applied thinly to surfaces and built up into a continuous, solid film by chemical or physical processes (for example, evaporation of the solvent). Varnishes usually consist of binders such as resins, dispersions or emulsions, fillers, pigments, solvents and additives.

Coating types as standard:

Model	Coating type		
	Wet painting	Powder coating	MKS Coating
CD 85	+		
Yalelift 360		++	
YL with integrated trolley[1]	+	++	
HTP/G	+		
CPE/CPA (with integrated trolley/Atex)	+		
Yalelift 360 Atex			+++
YL Atex with integrated trolley			+++
HTP/HTG Atex			+++

[1]Hand chain hoist powder coated/trolley wet painted

Additional coating possible for:

Model	Coating type		
	Wet painting	Powder coating	MKS + Powder coating
CD 85	x		
Yalelift 360		x	
YL with integrated trolley[1]	x	x	
HTP/G	x		
CPE/CPA (with integrated trolley/Atex)	x		
Yalelift 360 Atex			x
YL Atex with integrated trolley			x
HTP/HTG Atex			x

[1]Hand chain hoist powder coated/trolley wet painted

All three types of coating have the same purpose:

- Protection
  (protective effect, such as protective coating with combination of primer and top coat, protective varnishes),
- Decoration
  (optical effect, specific colour effect) and
- Function
  (special surface properties, such as modified electrical conductivity)

Selection criteria

The correct selection of an additional coating is essentially based on the following questions:

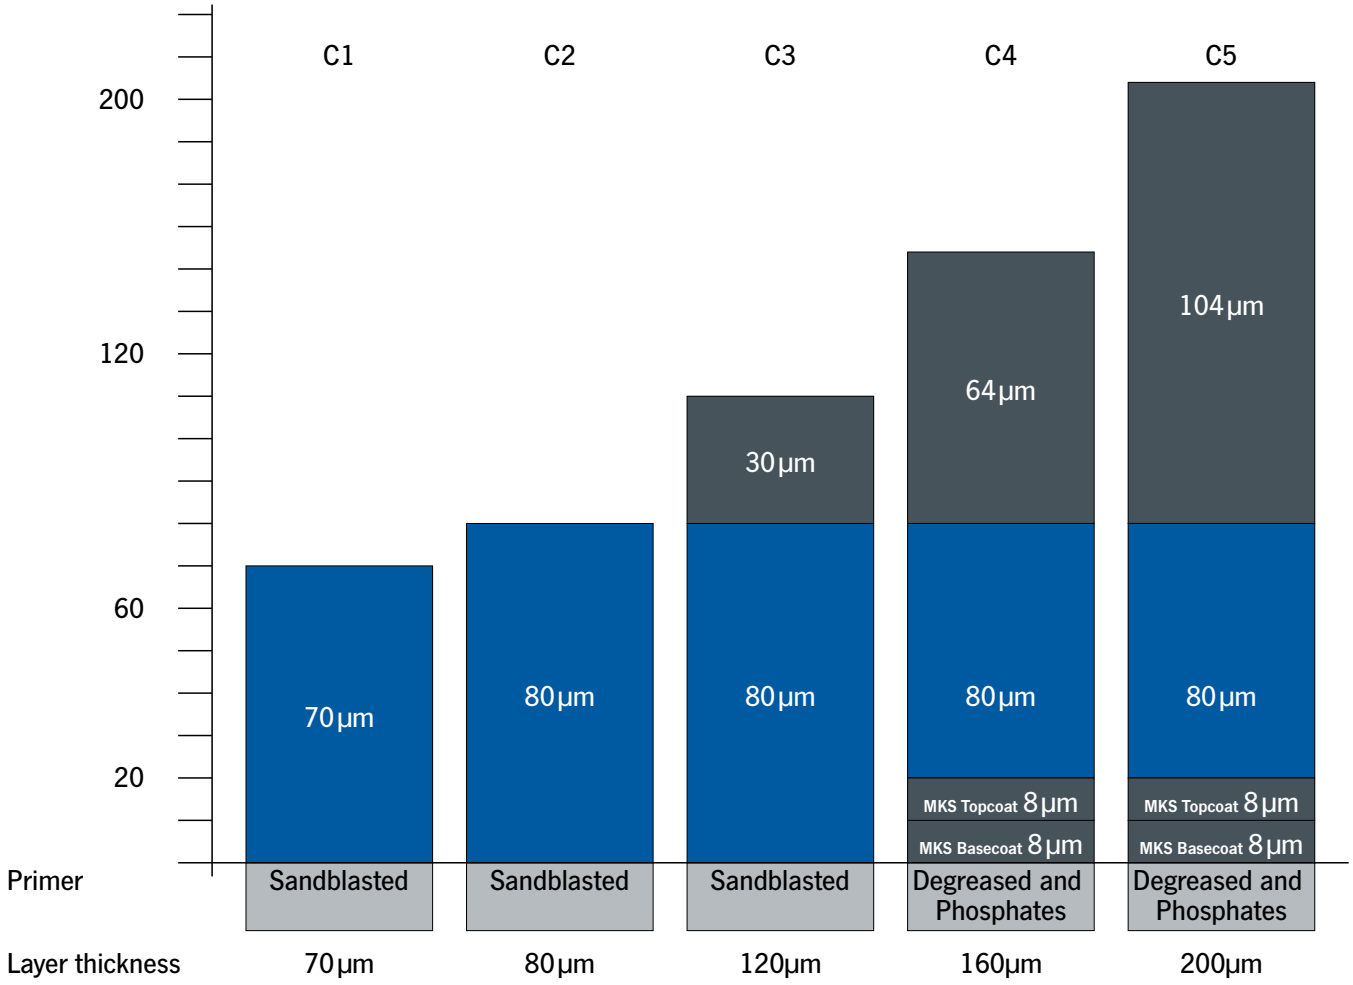

Where will the relevant equipment be used?

Chemical plants, refineries, off-/On-shore platforms etc.

What environmental stresses will the unit be exposed to?

This includes, for example, high humidity, industrial exhaust fumes, salty air, fluctuating temperature ranges, etc.

Layer thickness structure in general

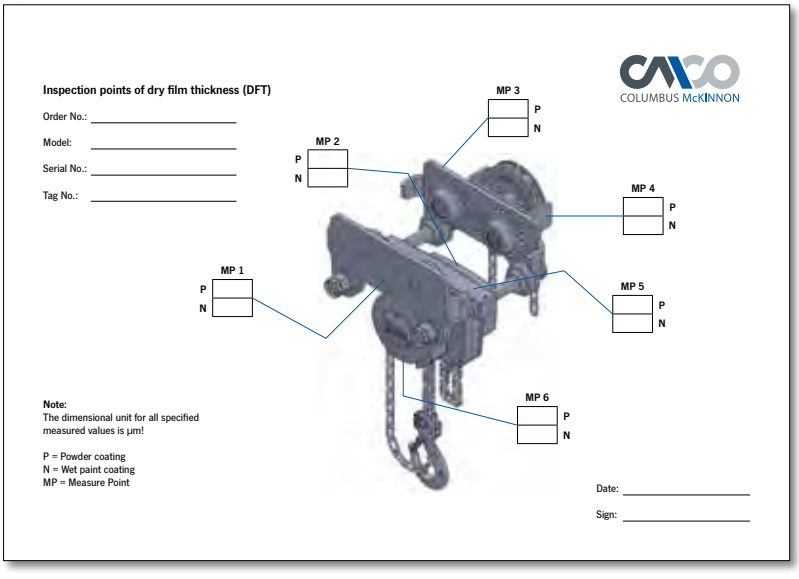

Up to C3 we cover all standard coatings (wet painting and powder coating) on our products.
This means that the corrosivity categories C1 and C2 are also covered.

INFO

We expressly point out that abrasion of the coating occurs on all external moving parts, which reduces the coating thickness. Depending on the model and type of base coating, base metal corrosion can therefore not be completely ruled out.

When measuring the coating thickness, slight deviations from the values given here are possible, depending on the measuring point.

A coating protocol can be prepared on request, at an additional charge.

HTP (Push trolley)

HTG (Geared trolley)

SERIES EXTENSION

NOW WITH HIGH WWL!

30000 - 50000 kg

HTP and HTG
Push and geared trolley

Capacity 500 - 50000 kg

The trolley enables the exact positioning or easy traversing of large loads with either manual or powered hoisting equipment.

Features

- It has excellent rolling features due to machined steel wheels mounted on prelubricated, encapsulated ball bearings.
- Adjustable to fit a wide range of beam widths and profiles (e.g. INP, IPE and IPB).
- Adjustments are made by rotating the clevis load bar which also ensures the centred positioning of the hoist in the clevis – no creeping to the left or the right (up to 5000 kg capacity, from 8000 kg upwards the traverse is adjusted via sleeves and washers).
- The trolley wheels are designed for a max. beam profile incline of 14 % (DIN 1025 - part 1).

Optional

up to 20000 kg capacity:

- Rotating hand chain guide.
- Stainless steel hand chains.
- Locking device to secure the trolley in position on the beam (park position e.g. on ships).
- Both versions are also available with high-temperature bearings up to 350°. From 250° C, however, the load capacity is reduced to 90 % of the nominal load and from 300° C the corresponding capacity is reduced to 80 % of the nominal load.

all capacities:

- Buffers

INFO

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

INFO

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

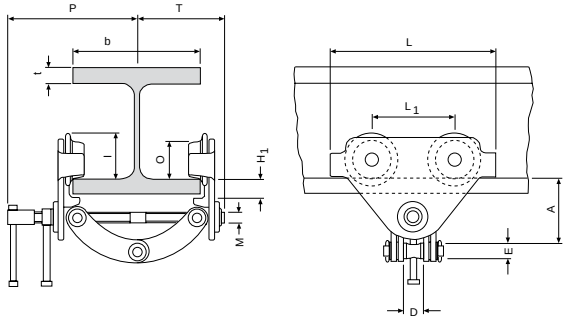

Table of contents >>

VTE-U, VTEF-U Electric trolley with shackle

Capacity 1000 - 5000 kg

Specially recommended for loads over 1000 kg, for transporting over long distances and/or when used frequently.

Suitable for almost all hoists with suspension hook due to universal shackle connection.
Travel motor with worm gear transmission ensures smooth start and self braking – a separate motor brake is not required.

Features

- Standard operating voltage:
  Euro-voltage 400 V, 3 Ph, 50 Hz.
  Single speed motors can be reconnected to 230 V, 3 Ph, 50 Hz.
- Motor protected to IP 55 against dust and water jets. Push-button pendant control IP 65.
- Compact, robust frame with low overall height.
- Wheels manufactured from fracture-proof steel. Smooth running due to machined surfaces and ball bearing mounting. Cambered profile suitable for flat and inclined beam profiles.
- Anti-drop and anti-tilt devices as standard.
- Easy adjusted to fit to a wide range of beam widths and profiles due to threaded spindles.

Optional

- Low voltage control 42 V
- Rubber buffers
- 230 V, 1 Ph, 50 Hz

Wheel with cambered profile

Threaded spindle

Anti-drop device with option to fit buffers

INFO

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

[3] at beam flange width B

YC
Beam clamp

Capacity 1000 - 10000 kg

Provides a quick and versatile rigging point for hoisting equipment, pulley blocks or loads. Flexible application due to wide adjustment range. The central threaded spindle allows easy attachment and a safe and secure grip. The spindle can be secured against loosening.

INFO

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

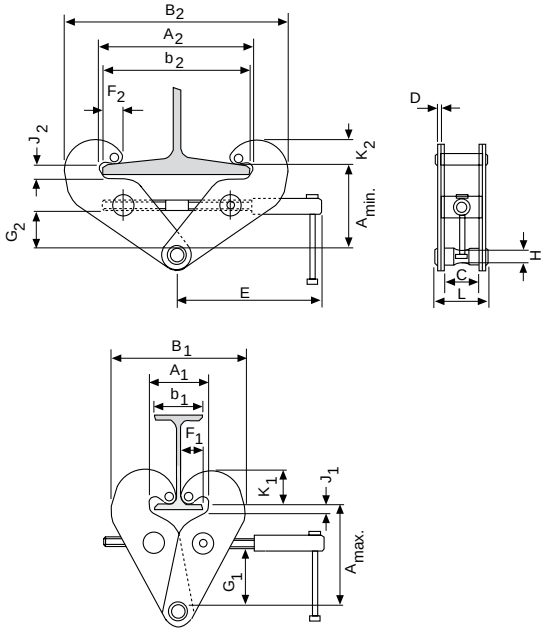

Suitable as a horizontal anchor point.
Can also be used as a lifting clamp.

INFO

General information about electric chain hoists

Apart from the usual criterion such as lifting capacity, lifting speed and dimensions also consider following:

1. Choosing a motor according to FEM 9.683

In addition to the torque the decisive criterion for rating an electric motor is the heat it generates. Here we differentiate between two operational modes:

1.1 Intermittent duty

In this case the motor is designed for a series of equal cycles consisting of duty periods with constant load and rest periods. The heat generation depends on the relative duty cycle, that is, the relationsship between operating period under load, total operating time and the number of starts/hour.

$$ED = \frac{\text{Operating period}}{\text{Operating period + rest periods}} \ \%$$

The number of cycles that can be made under full load is calculated as follows:

$$S \approx 0.3 \times \frac{ED \times V}{H}$$

S = Cycles per hour
ED = Duty rating in %
V = Lifting speed in m/min
H = Average lifting height in m

A cycle consists of a motion of lifting, lowering and the rest periods. One must ensure that the lifting height does not exceed the value permitted by the percentage duty cycle referred to a cycle period of 10 minutes

$$H \leq \frac{ED \times V}{20}$$

and that simultaneously the permissible number of starts is not exceeded. It is generally accepted that a cycle consists of 6 starts.

1.2 Short time duty

Where special duty conditions exist (e.g. long hook path) the operating period must be of such length that the admissible temperature limit of the motor is not exceeded. For such cases intermittent duty must be replaced by short time duty. That is, the motor may be operated for up to 10 starts over a certain period (with Yale products 30 min). Thereafter the motor must cool down to room temperature.

1.3 Calculation example intermittant duty

Electric chain hoist	:	CPV 5-8
Lifting speed	:	8 m/min
Lifting height	:	2.8 m
Duty rating ED	:	50 %
c/h	:	180

Number of cycles per hour

$$S = 0.3 \times \frac{50 \times 8}{2.8} = 42.8$$

Max. lifting height

$$H = 2.8 \leq \frac{50 \times 8}{20} = 20\,m$$

Number of starts

$$N = \frac{25 \text{ cycles}}{\text{hour}} \times \frac{6 \text{ starts}}{\text{cycle}} = 150 \text{ c/h}$$

2. Classification of hoisting equipment according to FEM 9.511

To choose an optimal hoist the lifting capacity and also the classification group must be known. The classification group indicates the theoretical operating time of the mechanical components under full load:

Classification group	FEM ISO	1 Bm M3	1 Am M4	2 m M5	3 m M6
Operating time in h		400	800	1600	3200

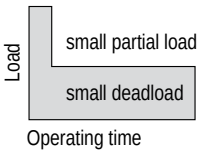

If the hoist is operated as classified an actual operating time of around 10 years can be expected.
After this period a general overhaul is necessary.

To define the classification group following values must be determined:

2.1 Average operating time per day

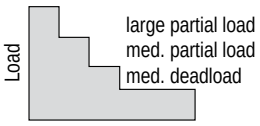

The average operating time can be estimated or calculated as follows:

$$\text{Time/day} = \frac{\text{2 x average hook path} \times \text{cycles /hour} \times \text{time/ day}}{\text{60 x lifting speed}}$$

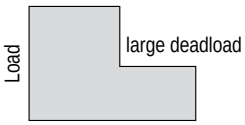

1 light

Hoists or parts thereof usually subject to very small loads and in exceptional cases only to maximum loads.

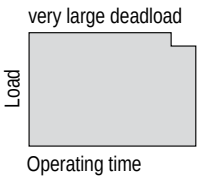

2 medium

Hoists or parts thereof usually subject to small loads but rather often to maximum loads.

3 heavy

Hoists or parts thereof usually subject to medium loads but frequently to maximum loads.

4 very heavy

Hoists or parts thereof usually subject to maximum or almost maximum loads.

2.2 Load spectrum

The load spectrum indicates to what extent a hoist or part thereof is subject to maximal stress or whether it is subject to smaller loads only. It can be calculated or estimated according to the diagrams on the right:

2.3 Classification

The classification group is defined by operating hours and load spectrum:

Load spectrum	Aver. op. hours per working day		
1 light	up to 2	2-4	4-8
2 medium	up to 1	1-2	2-4
3 heavy	up to 0.5	0.5-1	1-2
4 very heavy	up to 0.25	0.25-0.5	0.5-1
Classification group acc. to FEM/ISO	1 Bm/M3	1 Am/M4	2 m/M5

INFO

IP protection according to EN 60529

Depending on the operating and environmental conditions the damaging effect of water, foreign particles and dust and the contact with live or moving parts inside a motor is to be prevented by choosing a suitable protection.
The marking used to indicate the degree of protection consists of the letters IP followed by two characteristic numerals.
The marking applies to the unit as it is supplied and the defined or usual location of the unit.
The protection can change if the unit is located or fitted differently.

Motor surface cooled

Protection	1st digit		2nd digit
	Contact protection	Ingress of solid foreign particles	Ingress of liquid
IP 44	contact with tools or similar	against solid foreign bodies over 1 mm Ø	splashing from all directions
IP 50	complete protection against contact	damaging dust deposits	no protection
IP 54	contact with tools or similar	against solid foreign bodies over 1 mm Ø	splashing from all directions
IP 55	complete protection against contact	damaging dust deposits	water jets from all directions
IP 56	complete protection against contact	damaging dust deposits	momentarily flooding
IP 65	complete protection against contact	against ingress of dust	water jets from all directions

Protection against contact and solid foreign particles

First digit 0 No protection
No protection of persons against contact with live or moving parts inside the enclosure. No protection of equipment against ingress of solid foreign particles.

First digit 1 Protection against large solid foreign particles
Protection against accidental or inadvertent contact with live or moving parts inside the enclosure by a large surface of the human body, e.g. hand, but not protected against deliberate access to such parts.

First digit 2 Protection against med. size solid foreign particles
Protection against contact with live or moving parts inside the enclosure by fingers. Protection against ingress of medium size solid foreign particles of diameter greater than 12 mm.

First digit 3 Protection against small solid foreign particles
Protection against contact with live or moving parts inside the enclosure by tools, wires or such objects of thickness greater than 2.5 mm. Protection against ingress of small solid foreign particles of diameter greater than 2.5 mm.

First digit 4 Protection against granular structured foreign particles
Protection against contact with live or moving parts inside the enclosure by tools, wires or such objects of thickness greater than 1 mm.
Protection against ingress of granular structured solid foreign particles of diameter greater than 1 mm.

First digit 5 Protection against dust deposits
Complete protection against contact with live or moving parts inside the enclosure. Protection against harmful deposits of dust. The ingress of dust is not totally prevented, but dust cannot enter in an amount sufficient to interfere with the satisfactory operation of the equipment enclosed.

First digit 6 Complete protection
Complete protection against contact with live or moving parts inside the enclosure. Protected against the ingress of dust.

Protection against liquids

Second digit 0 No protection
No particular protection

Second digit 1 Protection against vertical water drops
Droplets of condensed water falling on the enclosure shall have no harmful effects.

Second digit 2 Protection against diagonal falling water drops
Protection against dripping liquids. Droplets of falling liquid shall have no harmful effect when the enclosure is tilted at any angle up to 15° from the vertical.

Second digit 3 Protection against spray water
Protection against dripping liquids. Water falling as rain at an angle equal to or smaller than 60° in respect to the vertical shall have no harmful effect.

Second digit 4 Protection against splashing
Liquid splashed from any direction shall have no harmful effect.

Second digit 5 Protection against water jets
Water projected by a nozzle from any direction under stated conditions shall have no harmful effect.

Second digit 6 Protection against flooding
Protection against conditions on ships decks (deck watertight equipment). Water from heavy seas shall not enter the enclosure under prescribed conditions[2].

Second digit 7 Protection against immersion in water
It shall not be possible for water to enter the enclosure under stated conditions of pressure and time[2].

Second digit 8 Protection against indefinite immersion
Protection against indefinite immersion in water.
Under specific pressure it shall not be possible for water to enter the enclosure[2]).

[2]) In certain cases water should not ingress. As required this is defined on the follow-on page of the unit in question.

COMPLETE SERIES CPV

CAPACITIES
125 - 5000 KG

WITH

SUSPENSION HOOK
AS STANDARD,

SUSPENSION LUG AS AN OPTION,

PUSH, GEARED OR
ELECTRIC TROLLEY

Yale *CPV*

Electric chain hoist with suspension hook or with integrated trolley

Capacity 125 - 5000 kg

The electric chain hoist CPV combines modern design and technical innovation. A robust construction makes the series a versatile tool for professional applications.
The integrated limit switch for the highest and lowest hook position considerably extends the working life span of the slip clutch, motor and gearbox.

Features

- Increased operating safety through 42 V control voltage (low voltage control) and the main contactor.
- The integrated limit switch for the highest and lowest hook position considerably extends the service life of the slip clutch, motor and gearbox.
- Overload protection (slip clutch) in all CPV hoists is outside force flow to meet higher safety requirements.
- Electromagnetic spring pressure brake holds the load safely even in the event of power failure.
- Different suspension types available such as top hook, lug or an integrated trolley. A retro-fit to another type of suspension is possible.
- Any chain length (lifting height) as per customer order.
- Oil bath gearbox (or semifluid grease with CPV/F 2-8 and 5-4 as well as CPV 2-4 and 5-2) with helical gearing for particularly smooth service and enhanced lifetime.
- All-steel chain guide.
  The chain guide of the smallest hoist CPV/F 2-8 and 5-4 as well as CPV 2-4 and 5-2 is a thermoplastic (POM) chain guide that is integral with the housing.
- CPV series are protected up to IP 55
- 2 year warranty (excluding wear parts).

INFO

Festooned cable systems please see pages 160 - 161.

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

Table of contents >>

Optional

- Other operating and control voltages.
- Flexible chain containers.
- Power supply cables, CEE plugs with phase changing switch.
- Radio remote controls, also acc. to DIN EN 13849-1, PL „d“.
- Pluggable control pendants.
- Wall mounted controls.
- Rotary limit switch as a back-up to standard limit switches.
- Frequency controllers, stepless and ramp controls.
- Suspensions 90° turned.
- Thermal sensors.

Optional:
Radio remote control

Optional:
with suspension lug

Yale *CPV*

Yale *CPV*

Options and features for applications

FOR CORROSIVE ENVIRONMENT & FOOD INDUSTRY

- Stainless steel load chains.
- Stainless steel load hooks for single fall hoists.
- Zinc- or copper- bottom blocks for double fall hoists.
- Zinc plated trolleys and/or 2-component topcoat.
- Food industry approved gearbox lubricants and grease (H1).
- Textile rain coats for hoists and trolleys.

FOR SIMULTANEOUS LIFTING

Yale offers solutions for lifting loads with two or more electric chain hoists simultaneously. Depending on the customer's application, the hoist system must meet various and sometimes very demanding requirements.

Please contact Columbus McKinnon to find a suitable solution.

- Radio or cable controls
- Movement selection: single or group movement
- On trolleys or as point hoists
- Coupled trolleys

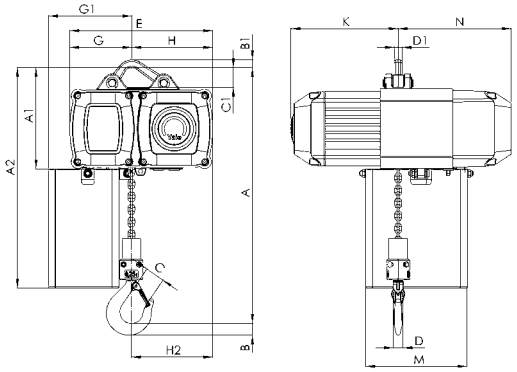

FOR CRANE BUILDING

- Beam locking device for trolleys
- Rubber buffers for trolleys
- Trolley travel end buffer stops
- 90° suspension on trolley
- Counter for operating hours
- Trolley travel end limit switches
- Signal horn or lamp for crane applications
- Festoon cable systems or other power supply
- Suspensions for light crane systems
- Crane operation pendants

CPEF
Electric chain hoist with suspension lug or with integrated trolley

Capacity 1600 - 7500 kg

The CPEF series is a range of high quality products for professional applications. They are highly efficient and engineered for a long working life. The hoists are composed of three main component parts which makes service easy and inexpensive.

Features

- Classification 1 Am/M4, except CPEF 20-8, CPEF 30-5 und CPEF 40-4 with classification 1 Bm/M3.
- 42 V low voltage control
- 2 year warranty (excluding wear parts) as well as a lifetime lubricated gear box.
- Motor fitted with a bimetallic thermal protection.
- The heavy duty squirrel cage motor has an adjustable spring pressure brake that holds the load secure even in the event of a power failure.
- Standard operating voltage: Euro-voltage 400 V, 3 Ph, 50 Hz.
- Motor protected to IP 55, insulation class F, against ingress of dust and water jets.
- Encapsulated pendant control protected to IP 65, against ingress of dust and water jets.
- The 5-pocket load chain sheave, manufactured from wear resistant case hardening steel, is matched perfectly to the load chain to guarantee smooth and precise chain motion.
- The standard, oil bath lubricated planetary gearbox is particularly smooth running.
- Forged suspension and load hooks are made from non-aging, high tensile steel and fitted with robust safety latches.
- The standard case hardened and zinc-plated link chain is matched perfectly to the load chain to guarantee smooth and precise chain motion.
  All requirements of national and international standards and regulations are fulfilled.

Optional

- Stainless steel load chain.
- Suspension hook rotated 90°.
- Flexible chain container.
- Other operating voltages
- Limit switches for highest and lowest hook positions (in combination with low voltage control).
- Radio remote control
- Control for synchronized operation of several hoists.
- Manual and electric trolleys.
- Festooned cable system or conductor rail system

CPEF 100-2
Electric chain hoist with suspension hook or with integrated trolley

Capacity 10000 kg

The model CPEF 100-2 consists of two CPEF 50-2 units. They are connected by a framework.
Suspension hook , geared or electric trolleys are available. Integrated limit switches for highest and lowest hook positions are standard. 42 V low voltage control as standard.

Optional

- Stainless steel load chain.
- Flexible chain container.
- Other operating voltages
- Motor with stainless steel brake.
- Radio remote control
- Festooned cable system or conductor rail system

INFO

The units are certified by the employer's liability insurance association (Berufsgenossenschaft) and fulfil the requirements of the machinery directive 2006/42/EG.

Festooned cable systems please see pages 160 - 161.

ST chain hoist

Users, crane manufacturers and systems manufacturers appreciate the robust classic which proves itself in operation day after day. It is powerful, reliable and undemanding as regards maintenance and power consumption. The supervised series production of the standard components brings you economic advantages. And in conjunction with the precise manufacture of off-standard components, the ST chain hoist is an acknowledged top level quality product.

The modular system permits numerous combinations of the sub-assemblies to achieve your individual solutions.
The ST series from STAHL CraneSystems is available in 6 load capacity variants for the load capacity range from 125 kg to 6300 kg. The chain hoists can be used as stationary models with suspension hook or eye, with rigid suspension or with a push trolley. Or when completed by an electric trolley, they are mounted on standard cranes, off-standard cranes or in systems manufacture.

The technical highlight that makes the ST chain hoist one of the safest around is its direct suspension from the solid cast iron chain guide. The chain guide integrates the load-bearing components in one component.

The STF chain hoists variant is equipped with frequency inverters from Magnetek as standard. This ensures precise, stepless lifting and travel with reliable feedback. Various off-standard designs are available for use in particular conditions. Two constructions optimise the effective hook height of all chain hoist models if required. The headroom of the short headroom trolley and extra short headroom trolley is reduced by 33 % and over 60 % respectively. For exceptional requirements, our experts in the engineering department will develop suitable customised solutions. Even in explosive atmospheres you do not have to manage without the ST chain hoist. On request, nearly the entire chain hoist programme is available in explosion-protected design for Zone 1, Zone 21 and Zone 22.

STK extra short headroom trolley

If you do not want to lose even a millimetre of lifting height, the STK extra short headroom trolley is just the thing for you.

The construction of the short headroom trolley itself saves a tremendous amount of space. The body of the chain hoist is mounted at an angle, meaning that no return sheave is required. This reduces the headroom by 33 %. The extra short headroom trolley with its headroom reduced by 60 %, by contrast, achieves maximum hook paths, which is particularly beneficial in extremely low-ceilinged rooms. The extremely short distance from the underside of the beam to the bed of the hook is just 210 mm at a load capacity of 5000 kg and even just 185 mm at a load capacity of 3200 kg. The chain hoists used here, mounted vertically, are based on the standard ST chain hoist programme from STAHL CraneSystems.

The innovative, patented chain guide is unique. Two separate, synchronously running chains act on a bottom hook block. The load is lifted and precisely positioned without swinging or vibration.

- Very compact dimensions for maximum use of headroom
- Specially developed for low-ceilinged rooms
- Low deadweight and low maintenance
- Load is lifted steadily and without swinging
- Trolleys with no projecting edges for steady cross travel
- Optionally with frequency inverters for lifting and travel and radio remote controls from Magnetek
- Optionally permanent electronic monitoring of the suspended loads
- Optionally available in explosion-protected design

STD dual chain hoist

The dual chain hoist is an off-standard development for long goods and loads which need to be picked up at two points. It has two load chains which are driven in synch by a single hoist motor. The distance between the hooks can be selected to suit the goods to be transported. The design means that the two running hooks running in synch lift and transport the load without dangerous tilting.

Due to the low headroom construction it is ideal where headroom is restricted. Depending on the requirements there are versions where the load hooks are either to both the right and left or only on one side of the chain hoist. For stationary use, the chain hoist, adapted to the width of the load, is mounted rigidly on a substructure. In combination with an electric trolley, the chain hoist becomes mobile.

The STD Vario dual chain hoist with its electrically adjustable distance between hooks allows goods with unequal loads or different lengths to be lifted without any problems, transported safely and positioned precisely.

- Low space requirement permitting maximum height of lift
- Two hook lead-offs running in synch on one hoist
- Synchronous lifting even with uneven loading, no tilting of the load
- Individually adapted to width of load
- Optionally with frequency inverters for lifting and travel and radio remote controls from Magnetek
- Optionally permanent electronic monitoring of the suspended loads
- Optionally available in explosion-protected design

STF chain hoist

The STF chain hoist combines the proven technology of the ST chain hoist with the advantages of the Magnetek IMPULSE® frequency inverters.

Equipped with the IMPULSE®·G+ Mini as standard, the STF chain hoist not only allows precise movements, but also provides valuable diagnostic and performance information such as the current status of the chain hoist via data exchange with IoT networks. The IMPULSE·G+ Mini frequency inverter can be connected to fieldbus systems such as Modbus, Profibus or Ethernet, making it an important step towards Industry 4.0.

The STF chain hoist is equipped with overspeed protection, standstill monitoring (SRC rotation control) and 1024 PPR tachometer. This ensures greater safety for the operator and less stress on structural, mechanical and control components. The fast programmability of the frequency inverter, also offers a safe, highly reliable and simple plug-and-play application.

- Standard with Magnetek IMPULSE·G+ Mini
- Optional frequency-controlled drive
- Simple connection to IoT networks
- Increased safety through overspeed protection and standstill monitoring (SRC rotation control)
- 1024 PPR tachometer for reliable feedback in harsh environments
- Simple plug-and-play application
- IP66 protection available as an option
- Braking resistance also optionally available in IP67

Industry-specific applications

Special industries place special hygienic and mechanical demands on the work equipment used there and thus also on crane systems and chain hoists.

The standard components can for example be adapted to many requirements in the food sector by means of special paints and biodegradable lubricants with food approval or by design in protection class IP66. The chain hoist can be used in clean rooms or in medical technology by using trolleys and load chains made of stainless steel, acid and alkali-resistant components or drip pans under the hoist and trolleys.

The extra short headroom trolley and the dual chain hoist are suitable for complex, space-saving solutions, for example in cold rooms or big bag discharge systems. All components are also available in explosion-protected versions – so even hazardous materials such as flour, grain or sugar can be transported safely.

- IP66 protection for hoists and controls
- Anti-condensation heaters against corrosion
- Stainless steel components
- Acid and alkali-resistant components
- Special paints and lubricants
- Use in harsh environments, e.g. in foundries
- Drip pans and trays
- Low-wear electronic swing damping
- Synchronous chain guides and synchronous lifting
- Explosion-protected versions

ST
Electric chain hoist with suspension hook or with integrated trolley

Capacity 250 - 2000 kg

Users, crane manufacturers and systems manufacturers appreciate the robust classic which proves itself in operation day after day. It is powerful, reliable and undemanding as regards maintenance and power consumption. The supervised series production of the standard components brings you economic advantages. And in conjunction with the precise manufacture of off-standard components, the ST chain hoist is an acknowledged top level quality product.

The modular system permits numerous combinations of the sub-assemblies to achieve your individual solutions. The ST series from STAHL CraneSystems is available in 6 load capacity variants for the load capacity range from 125 kg to 6300 kg. The chain hoists can be used as stationary models with suspension hook or eye, with rigid suspension or with a push trolley. Or when completed by an electric trolley, they are mounted on standard cranes, off-standard cranes or in systems manufacture. The technical highlight that makes the patented ST chain hoist one of the safest around is its direct suspension from the solid cast iron chain guide.

Features

- Extensive chain hoist range for lifting capacities from 125 kg to 6300 kg
- Suspension directly from the chain guide of solid cast iron
- Easy inspection and maintenance of the chain drive thanks to overmounted drive shaft
- Optionally with frequency inverters for lifting and travel from Magnetek
- Extremely short and compact construction ensures that space can be utilised to the maximum
- High ISO classification according to FEM/ISO standards
- Optionally available in explosion-protected design complying with ATEX and IECEx

INFO

STAHL CraneSystems hoists are not designed for passenger elevation applications and must not be used for this purpose.

CPA 10-9

CPA 1-13 / 2-10 und 5-5
CPA 10-9
Pneumatic chain hoist with suspension hook

Capacity 125 - 980 kg

Pneumatic chain hoists are characterized by high durability in a great number of industrial applications. The robust but light weight housing allows an easy transport.

Features

- Operating pressure 6 bar
- Rotating piston motor with 100 % duty rating and an unlimited number of starts for continuous operation.
- Integrated limit switches for highest and lowest hook position as standard.
- Self-adjusting automatic disc brake
- Extremely sensitive control with emergency-stop for a precise positioning of the load.
- Air release for brake as standard for CPA 10-9

Optional

- Trolleys for pneumatic chain hoists with suspension hook.
- Maintenance unit for main air supply pipe (pressure regulator, manometer, lubricator and support).
- Chain container

Applications

Automobile and aircraft industries, shipyards, on ships and docks. Foundries, on-/offshore, paint factories and paint shops, refineries, oil depots, galvanizing. Printing, textile and food industries, pulp, paper and cement mills. Glass and ceramic industries, wood working industries, chemical industries, heat treatment and power plants etc.

Explosion-proof version corresponds to Basic.

INFO

To ensure faultless operation the compressed air supply must be filtered and oiled!

Also suitable for operation with nitrogen.

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

BASIC design

CPA ATEX Basic
Pneumatic chain hoist with suspension hook or with integrated trolley

Capacity 2000 - 10000 kg

With 100 % duty rating and an unlimited number of starts the model CPA is suitable for heavy duty applications. It is insusceptible to contamination, humidity and aggressive mediums from the outside.
The hoists are composed of three main components which makes service easy and inexpensive.

Features

- Working pressures 4 - 6 bar.
- Robust rotating piston motor has an adjustable spring pressure brake that holds the load secure even in the event of an air failure.
- The standard, oil bath lubricated planetary gearbox is particularly smooth running and enables a low overall height.
- High starting torque due to switching valves in the motor body.
- Low noise emission due to large dimension silencer.
- Sensitive control by means of 2 resp. 4 button pendant control with emergency-stop.
- The assembly of component parts result in a low overall height (up to 3000 kg only one chain fall).
- The 5-pocket load chain sheave, manufactured from wear resistant case hardening steel, is matched perfectly to the load chain to guarantee smooth and precise chain motion.
- Forged suspension and load hooks are made from non-aging, high tensile steel and fitted with robust safety latches.
- The standard case hardened and zinc-plated link chain is matched perfectly to the load chain to guarantee smooth and precise chain motion.
  All requirements of national and international standards and regulations are fulfilled.

Optional

- Also available in combination with trolleys, both trolley/hook suspension and with integrated trolley.
  Also applies to Atex.
- Rope control
- Limit switch
- Chain container
- Maintenance unit, consisting of pressure regulator, pressure gauge, lubricator and holder.
- Mobile maintenance unit
- Stainless steel load chain.

INFO

To ensure faultless operation the compressed air supply must be filtered and oiled!

Also suitable for operation with nitrogen.

Where no maintenance unit can be installed permanently, it is recommended to work with a mobile maintenance unit.

Information about chains see pages 90 - 92.

INFO

The chain claw -
the simple alternative.
Fast and practical.

KKL Yale chain claw for round link chains

Model	Art.-No.	Capacity kg	Suitable for chain-Ø mm
KKL 2000	192080829	2000	7 - 8
KKL 3150	192080830	3150	10

The use for different chain dimensions is not permitted.

KKL Yale chain claw for round link chains

The KKL also offers the operator additional safety with dynamic loads!
Due to the lack of additional mechanical locking, the chain claw can be moved faster than the chain stop.
It replaces the chain end piece and thus saves additional weight!

Here too, the attachment point should be as close to the housing as possible, for optimal safety.

YKST Yale chain stop for round link or roller chains

The Yale chain stop is designed to be used as an additional fall arrester for round link and roller chains. Especially where oscillations and vibrations could cause the load chain to slip, chain stops can reliably increase safety! For this purpose, the chain stopper YKST should be positioned as close as possible to the housing of the unit and should be repositioned after the hoist has been operated so that the dynamics are as low as possible. After pressing the slider, the chain stopper can be moved on the load chain of the hoist and locks itself by means of spring force after positioning on the chain. The YKST can only be actively unlocked by the release mechanism of the actively unlocked by the release mechanism of the slider. This prevents accidental loosening during operations!

Chain stop attached to roller chain

Chain stop attached to link chain

INFO

The nominal load marked on the chain stopper is the max. load, that each single chain fall can lift, but not the nominal load of the hoist for example model D 85, 10 t, three chain falls, satisfy 3334 kg per chain fall.

INFO

The Yale chain stop - proven in use for more than 10 years!

The YKST was developed especially for the requirements in overhead line construction and was then dynamically tested by an independent body!

YKST Yale chain stop for link chains

Model	Art.-No.	Capacity kg	Suitable for chain-Ø mm	Dimension L x W x D mm
YKST 1600	N00100115	1600	5.6 - 8	75 x 56 x 15
YKST 3200	N00100110	3400	9 - 11	105 x 82 x 24

The use for different chain dimensions is not permitted.

YKST Yale chain stop for roller chains

Model	Art.-No.	Capacity kg	Suitable for chain-Ø
YKST 750	N00100146	750	5/8" x 3/8"

The use for different chain dimensions is not permitted.

80 - 125 kg

300 - 750 kg

SW-W
Wall-mounted winch

Capacity 80 - 750 kg

Wall-mounted rope winches of the SW-W model range are intended for fixed stationary mounting inside a building. The steel wire rope is guided to the required suspension point of the load by means of deflection sheaves.

Features

- Robust aluminium housing for models SW-W 80 and SW-W 125, proven steel plate design for models SW-W 300 - 750.
- Spur gear drive for optimal efficiency and comfortable handling. Direct drive for loads up to 125 kg.
- The low-noise safety spring brake safely holds the load in every position.
- Removable hand crank for models SW-W 80 and SW-W 125, foldable crank for models SW-W 300 - 750.
- Easy and quick mounting onto walls.

SW-W ALPHA
Wall-mounted winch

Capacity 300 - 1000 kg

A versatile wall-mounted winch for an easy lifting of loads.

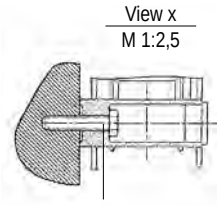

Features

- Light weight robust stamped steel housing and compact design.
- Spur gear drive for optimal efficiency and comfortable handling.
- Rope lead-offs to all directions.
- All parts are zinc-plated for increased corrosion protection, drum with additional special coating.
- Integrated crank with load pressure brake for safe holding of the load.
- Easy and quick mounting onto walls.

INFO

For a better guiding of the rope to the suspension point we recommend the use of sheaves or sheave blocks, please see page 105.

Fastening screws
to be fastened with M12
bolts quality class 8.8

SW-W-SGO-S
Capacity 1500 kg

SW-W-SGO-S
Wall-mounted winch with worm gear drive

Capacity 250 - 5000 kg

Wall-mounted winch with worm gear drive and load pressure brake for efficient lifting of heavy loads.

Features

- Housing and rope drums made out of robust steel plate.
- Worm gear drive with additional load pressure brake for safe holding of the load.
- Roller bearings ensure smooth running of the rope and increased lifetime of the winch.
- Second speed for fast lifting of smaller loads, resulting in lowest possible handle effort and rapid winding of the rope (for capacitites of 2000 kg and above).
- Wide rope drum for a large rope capacity with two rope attachment points.
- Easy and quick mounting.

MWS
Manual winch
with spur gear drive

Capacity 150 - 1500 kg

For the operation where no electricity is available or in a dirty environment.

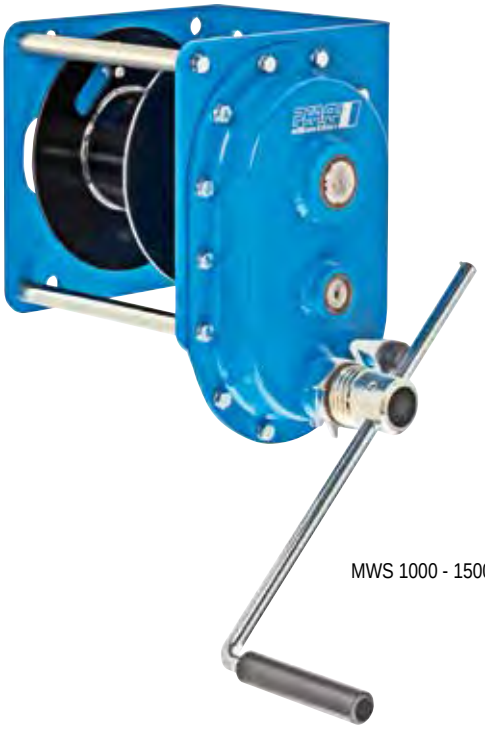

Recommended rope diameter according to
EN 12385 FE-znk 1770 sZ-spa.
The rope is not included in the delivery.

Features

- Enclosed gear drive for protection of internal parts, even under tough working conditions.
- Spur gears on roller bearings, rope drum on plain bearings.
- Compact design.
- Easy and quick mounting onto walls, poles etc.
- They have a self-locking, anti-kickback and adjustable crank handle for fast lifting of smaller loads, resulting in lowest possible handle effort and rapid winding of the rope.
- Automatic load pressure brake for safe holding and extremely sensitive lowering of the load. Unintentional brake release is prevented even with swinging loads.
- They are suitable for operation in ambient temperatures of -10°C up to +50°C.

Optional

- Corrosion resistant version.

MWS 1000 - 1500

MWS 300 - 600

MWS 150

INFO

For a better guiding of the rope to the suspension point we recommend the use of sheaves or sheave blocks, please see page 105.

Pfaff winches are not designed for passenger elevation applications and must not be used for this purpose.

LB
Console-mounted winch

Capacity 150 - 1200 kg

Originally developed as offroad winch the console-mounted winch model LB is used today for a variety of lifting and pulling applications.

Features

- Light weight robust stamped steel housing.
- Spur gear drive for optimal efficiency and comfortable handling.
- Automatic load pressure brake for save holding of the load in any position. An unintentional brake release is prevented.
- All parts are zinc-plated for increased corrosion protection, drum with additional special coating.
- Easy and quick mounting to consoles, even under lifting conditions.

Optional

- Stainless steel version (mat. 1.4301) for increased corrosion protection.

LB, zinc-plated version, capacity 1200 kg

LB, zinc-plated version, capacity 350 kg

LB-VA, stainless steel version, capacity 900 kg

INFO

For a better guiding of the rope to the suspension point we recommend the use of sheaves or sheave blocks, please see page 105.

Pfaff winches are not designed for passenger elevation applications and must not be used for this purpose.

SW-K GAMMA Console-mounted aluminium rope winch

Capacity 200 - 800 kg

Due to its rugged design, the aluminium rope winch is suitable for operation outdoors.

Features

- Compact aluminium housing and enclosed sprocket wheel drive. From a capacity of 500 kg with speed increasing ratio for small loads and quicker winding and unwinding of the unloaded rope.
- Spur gear drive for optimal efficiency and comfortable handling.
- Enclosed gear for the protection of parts inside, also for arduous applications.
- Low-friction shaft sliding bearings for improved rope lead-off and a longer service life of the winch.
- Wide rope drum for a large rope capacity with two rope attachment points.
- Easy and quick mounting.
- With integrated safety spring brake system and removable crank. The winches can be operated from either side.

SW-KAL
Compact aluminium rope winch with free-wheeling device

Capacity 750 - 1120 kg

Console-mounted rope winches are used for super-structures on vehicles and trailers and when lifting and lowering loads.

Features

- Self-locking worm gear, free-wheeling device for ease of operation.
- Enclosed gear for the protection of internal parts, also for arduous applications.
- Low-friction shaft bearings for a longer service life of the winch.
- Easy and quick mounting.

INFO

Pfaff winches are not designed for passenger elevation applications and must not be used for this purpose.

SW-K LAMBDA
Console-mounted rope winch DGUV Vorschrift 17 (BGV C1)

Capacity 300 kg

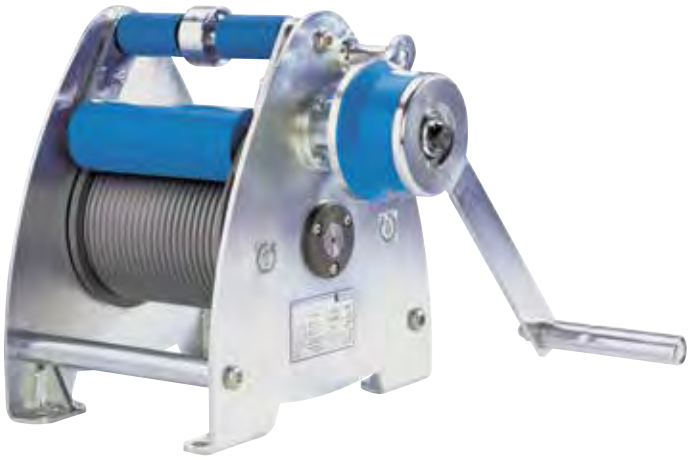

The compact rope winch for applications on stages, in studios, theatres, etc.

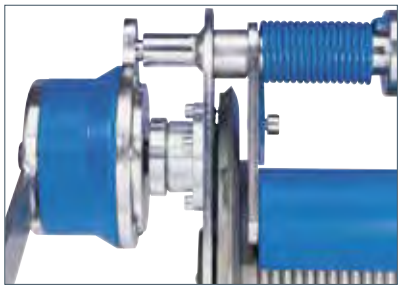

Features

- State-of-the-art design with galvanized side sections for easy handling.
- Grooved drum for single-layer winding of the steel rope. An 18:1 ratio between drum and rope diameter increases the service life of the rope substantially.
- With spring-loaded rope pressure roller to prevent the unloaded rope from jumping off the drum.
- Gear rated for twice the nominal load.
- Spur gear drive for optimal efficiency and comfortable handling.
- The fitted safety crank with two spring brakes acting independently of each other for safe holding of the load in any position.
- In compliance with DGUV Vorschrift 17 (BGV C1) and DIN 56925. Certified by the German committee for lifting equipment (GS-approval-tested safety).

Optional

- Drum extension for a larger rope capacity.
- Special grooves (several layers).

INFO

Pfaff winches are not designed for passenger elevation applications and must not be used for this purpose.

OMEGA
Console-mounted rope winch

Capacity 800 and 1000 kg

Developed for special challenges:
The OMEGA and OMEGA Offshore versions are prepared for manual operation and operation via an external motor-powered drive.

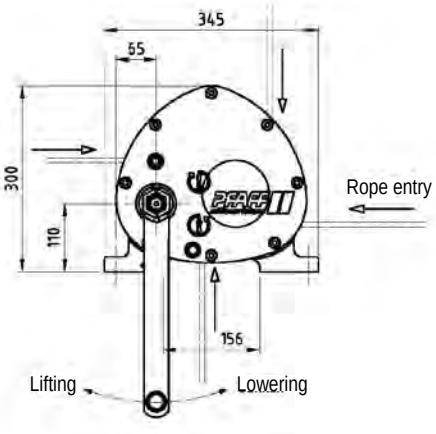

Features

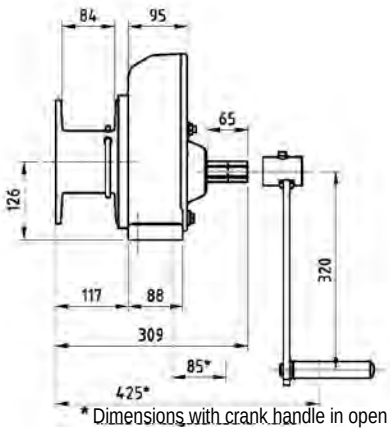

- Removable hand crank.
- Encapsulated gearbox running in oil bath.
- High-quality painting to improve corrosion protection.
- External motorized drive possible (OMEGA Offshore).

Yale*trac ST*

Cable puller

Pulling force 500 - 3200 daN

The portable Yale*trac ST* cable puller is a versatile tool for pulling, lifting, lowering, tensioning and securing loads over long distances. It has been specially designed for applications in industry, building construction, civil engineering, power line construction, ship building and oil refineries etc. The Yaletrac ST cable puller is almost service free – easy to use and safe.

Cable pullers model Yale*trac ST* feature a housing of dimensionally stable deep-drawn steel plates ensuring a compact and robust design. The hand operating forces have been noticeably optimised for the user by the application of axial ball bearings.

Features

- Stable upright positioning of the unit due to the combination of handle and foot.
- Space-saving telescopic hand lever that can be safely attached to the unit by means of a hook-and-pile fastener. Short handle lever for Y 05 ST not telescopic.
- Overload protection is provided by a shearing pin. Spare shear pins are conveniently located in the carrying handle. A broken pin can be replaced without removing the load.
- Yale*trac ST* uses a special flexible rope. It has six strands with a steel core and is identified by an orange strand. The rope is tapered at one end for easy threading and is fitted with an eye sling hook with safety latch on the other end.
- The parallel arrangement of the clamping system protects the rope by distributing the clamping forces evenly. A long rope advance per each lever stroke increases the working speed.
- Increased service life of the unit due to the use of rubber sleeves which prevent dirt and dust from penetrating into the mechanical equipment of the unit.
- Positioning of the forward and reversing levers in tandem provides a slim design and ensures optimal power transfer.
- A lever disengages the rope clamp system allowing easy and smooth installation of the rope.
- The large opening in the top of the unit allows easy cleaning: simply flush the unit with water and apply motor oil for lubrication and the Yaletrac ST is again ready for use.

Y 10 ST up to Y 32 ST

Optional

- Eye sling hook with safety latch
- Longer ropes
- Drum reel

Yaletrac Cable puller

Pulling force 800 - 3200 daN

It has a light weight, compact, high tensile aluminium alloy housing with a large flat bottom surface for increased stability in horizontal as well as vertical working position.

Features

- Forward and reversing levers in tandem provide slim design and assure power transfer along the centre line.
- Overload protection is by a shearing pin in the forward lever. Spare shear pins are conveniently located in the carrying handle or operating lever. A broken pin can be replaced without removing the load.
- A lever disengages the rope clamp system allowing easy, smooth installation of the rope.
- Yaletrac uses a special flexible rope. It has six strands with a steel core and is identified by an orange strand. The rope is tapered at one end for easy threading and fitted with an eye sling hook with safety latch on the other end.
- The parallel arrangement of the clamping system protects the rope by distributing the clamping forces evenly. A long rope advance per each lever stroke increases the working speed.
- The large opening in the top of the unit allows easy cleaning: simply flush the unit with water, apply motor oil for lubrication and the Yaletrac is again ready for use.

Optional

- Eye sling hook with safety latch
- Longer ropes
- Drum reel

INFO

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

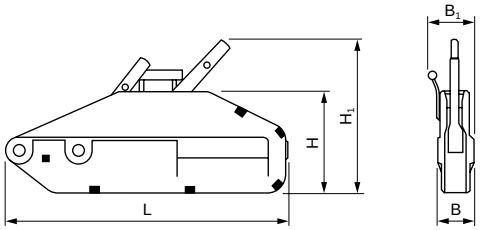

Complementary products available like cable grips (page 111), pulley blocks (page 110) and textile slings (pages 248 - 253).

Pulley blocks, hinged, with single steel sheave

Capacity 1000 - 6400 kg

One side of the Yale pulley blocks is hinged and can be opened for easy and quick positioning of the wire rope on the sheave. It can also provide a quick and versatile rigging point or redirect a wire rope.

Features

- Swinging the hook in the direction of pull securely locks the pulley block.
- The high quality cast steel sheaves have machined grooves and are fitted with Permaglide® bushes.

INFO

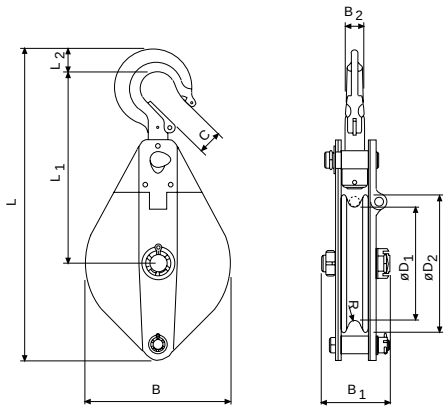

When choosing and classifying pulley blocks, take the “Grundsätze für Seiltriebe” DIN 15020 into consideration.

LMG Cable grip

Pulling force 2000 - 5000 daN

The LITTLE MULE® cable grip is a device for gripping, pulling and tensioning uncoated wire ropes, cables and metal rods in all forms up to a tensile strength of 1770 N/mm^2 but is dependant on the diameter and surface condition.

The parallel jaws provide a firm, non-slip grip without causing damage to the wire rope. A special spring-loaded guide prevents the grip from dropping off the wire rope and allows instant release without jamming.

LMG I-X und LMG II-X are supplied with grooved jaws and are suitable for wire ropes with a tensile strength of up to 1960 N/mm^2, but is dependant on the rope diameter and surface condition.

Technical data LMG

INFO

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

Steel rope for manual and electric winches

All electric winches are supplied without load bearing mechanisms as standard. To ensure safe operation an optimum rope design, optimum length and associated fastening elements (hooks, shackles) are selected.

We recommend to choose wire ropes on the basis of design, type of construction and strength to suit the intended use and frequency of use. The features of the different types of rope design are as follows:

Breaking load
→ Load bearing capacity, strength of the rope

Bending fatigue + flexibility
→ Service life

External wear
→ Stability of the outer strands

Torsion characteristics
→ Lifting of guided or unguided loads

INFO

The use of plastic-coated steel wire ropes with lifting equipment is not permitted.

To meet individual requirements we can provide assistance for the selection of length, diameter and type of the rope, as well as a fastening equipment (thimbles, hooks, rope clips, etc.).

Handling

Our product range includes winches for lifting, pulling and moving of loads. In combination to our winches the following rope types apply:

Standard design
6 x 19 + FE 1770 N/mm²

Manual winch rope with fiber inlay 3 - 12 mm Ø

Galvanized or stainless steel in mat. 1.4401
Nominal strength 1570 N/mm² (low breaking load)

- not non-twisting
- crosslay type of construction
- low-tension
- lifting rope for infrequent actuation
- rugged and widely resistant

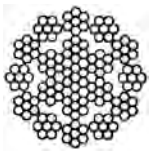

Warrington-Seale
6 x 36 WS + SES (FE) 1770 N/mm²

Manual and electric winch rope in parallel type of construction 10 - 28 mm Ø

Galvanized, with fiber or steel inlays as options

- highly flexible
- high breaking load
- average number of reversed bending stresses

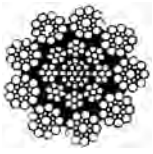

Non-rotating special rope
SE-znk - 1960 N/mm²

Standard rope for electric winches, non-rotating spiral strand rope 3 - 13 mm Ø

Galvanized

- balanced characteristics
- lifting rope for unguided single rope suspension elements
- lifting rope for large lifting heights with multiple rope suspension elements
- not to be used with a swivel
- high strength
- high bending fatigue characteristics

Heavy duty winch rope

Electric winch rope with plastic-coated steel core in double-parallel type of construction 6 - 30 mm Ø

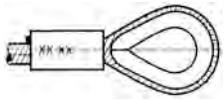

Bright and greased, not non-twisting

- special rope for frequent bending stress reversals and long use
- to be used only with matching rope sheaves and drums
- optimized break loads due to higher fill factor

Rope fasteners/rope connections

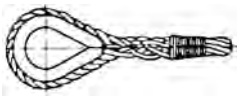

The safe functioning of the rope drive depends to a large extent on the rope fastenings on the winch and on the load. Rope connections and ropes themselves have to be checked at regular intervals by competent persons.
The following rope connections are permissible for use with lifting equipment:

Non-releasable rope connections

Aluminium press-on connection with thimbles

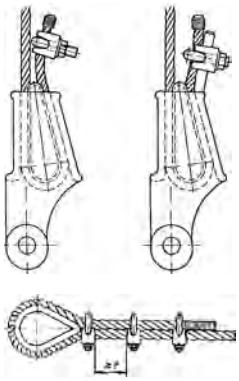

in combination with safety eye hooks or screw shackles provide a simple and safe means of suspending loads.

Splice connections (uncoated)
in combination with thimbles, hooks, etc.

In the most unfavourable situation, splice connections can lead to a reduction in the breaking load of the rope line of up to 40 %.

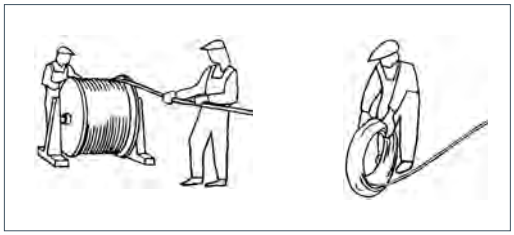

Releasable rope connections

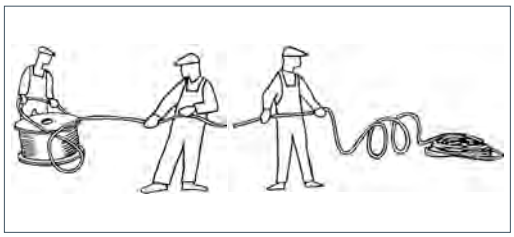

Rope clips

- The end which is not under load must never be fastened to the load-bearing line.
- The length of the unloaded rope end should be at least 20 times the diameter of the rope and not less than 150 mm.
- Clips may no longer be used once the rope has worn by more than 10 %.
- Wire rope clamps may not be used for rope connections for lifting equipment, with the exception of fastening equipment which is manufactured for none-recuring, special purposes!

Handling of ropes – Unwinding

RIGHT

WRONG

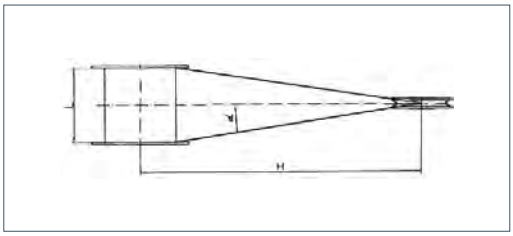

Care of ropes

”Running ropes” in particular will only offer optimum service lives if they are well lubricated. The use of steel ropes without grease will cause them to wear quickly and the load bearing mechanism will have to be replaced early.

INFO

Pressed and splice connections may only be produced by specialist firms or rope manufacturers.

Notes on the installation of winches

The distance between rope drum and sheave must be selected in a way that the maximum deflection angle for the type of rope used is not exceeded:

Standard rope - Deflection angle < 3°
(Minimum distance = Drum width x 10)

Special rope - Deflection angle < 1,5°
(Minimum distance = Drum width x 20)

- To prevent the wire rope from becoming slack when unloaded it should always have an additional rope weight when used with lifting equipment
- Guided loads must be monitored with a slack rope cut-out.
- To prevent the rope from becoming damaged, steel wire ropes must never be guided
  - over edges
  - over deflection radii which are too small or
  - over rope sheaves with grooves which are too small.
- High dynamic forces can lead to sudden breaks or crashes of the load. It is therefore imperative that loads are never brought to a dead stop (“on block”) and that loads are never allowed to drop into the rope.

The image shows the winch RPE
up to 1.0 t

Yale *RPE*

Electric winch

Capacity 250 - 2000 kg

Winches series RPE are designed for performance, efficiency and safety and offer many advantages and options. RPE's compact, practical cube design and universal rope lead-offs allow individual applications in almost any position for lifting and pulling loads.
The winches are designed to DIN 15020, classification 1 Bm/M3 and the EC machinery directives.

Every winch is factory tested with overload. The units are supplied with a test certificate showing the unit's serial-no. and an operating instructions manual which contains a manufacturer's declaration.

Features

- Compact dimensions due to internal brake motor.
- Standard: 400 V/230 V, 3 Ph, 50 Hz
  or 230 V, 1 Ph, 50 Hz
- Protected to IP 55
- Insulation class F
- Adjustable slip clutch to protect the winch from overloading standard for RPE 10-6 and RPE 20-6.
- Spur gear transmission with helical first gear ensures smooth motion. Lubricated by grease and can, therefore, be used in any position.
- Spring pressure disc brake incorporated in the motor holds the load secure even in the event of a power failure.
- Plain rope drum standard.The rope is secured to the drum in a recess so that the rope can be wound onto the drum in several layers without damage.
- 42 V low voltage control (incl. push-button with emergency-stop and 2 m control cable) or without controls.

Rope attachment

Spring pressure disc brake

Brake motor

INFO

When selecting the length of the rope please bear in mind that a minimum of 2 - 3 windings have to remain on the drum!

The wire rope, if ordered, comes dismounted, and is to be mounted onto the drum by the user.

Please note, the single-phase winches generate a higher noise level than those with three-phase motors!

Optional

- Different drum designs (XL) extended to accommodate longer rope.
- Machined grooved drums for better rope reeling.
- Drums with separation web and extra rope outlets for working with two or more ropes.
- Geared limit switches to limit rope motion in both directions (in combination with 42 V low voltage control).
- Slack rope switch to automatically stop the winch when rope tension eases e.g. when the load touches down (in combination with 42 V low voltage control).
- Frequency converter for stepless speed control.
- Radio remote control (in combination with 42 V low voltage control).
- Other operating voltages on request.
- Motor brakes with manual release.
- Special coatings or zinc plated finish.

The image shows the winch RPE 20-6 with the grooved drum (optional).

BETA SL
Electric winch

Capacity 250 - 2000 kg

Electric winches of the BETA SL range are used for lifting, towing and positioning of loads. The proven technology and specified equipment features make the winch the ideal product for standard applications.

Features

- The electrically released spring pressure disc brake safely holds the load also in the event of a power failure.
- Powerful three-phase AC drives for multi-range voltage 400V – 50Hz. Motor type of enclosure IP 55, duty factor 40 % ED.
- Electronic overload protection from 1000 kg lifting load as standard.
- The maintenance-free, oil lubricated gearbox has quiet running characteristics due to milled and ground gears with helical teeth.
- Standard rope drum of grooved design, with large rope capacity.
- Variable rope lead-in.
- Contactor control (incl. gear limit switch).
- In accordance with DGUV regulation 55 (winches, lifting and pulling equipment).

Also available at short notice with the following options:

- Rope pressure roll
  Supports the tidy coiling of the rope, especially with high lifting heights.
- Slack rope switch
  Prevents unwanted uncoiling if the wire rope is not under load.
- Control switch with 3 m control cable
  Greater freedom of movement for the user, better view of the working area of the wire rope winch.
- Frequency converter (SL 1 - SL 3)
  Infinitely variable rope speed controlled via potentiometer, control range 20-87 Hz (SL 3 = 10-50 Hz). The frequency converter allows loads to be moved gently and sensitively..

Optional: Frequency converter
(For infinitely variable speed regulation)

INFO

Pfaff winches are not designed for passenger elevation applications and must not be used for this purpose.

THETA
Electric winch

Capacity 100 kg

The compact Pfaff-silberblau THETA series offers reliable safety, besides being suitable for a wide range of applications and very easy to use. Its high safety standard is achieved, amongst other things, by a mechanical double safety drum brake, separate from the drive, for safe and firm holding of the load.
Factory-specified features make this safety electric wire rope winch interesting for many applications, such as construction sites, in building technology or sports facilities – and thus also for individuals, craftsmen, local councils and construction yards. The Pfaff-silberblau THETA wire rope winch is operated with a supply voltage of 230 V (50 Hz).

Features

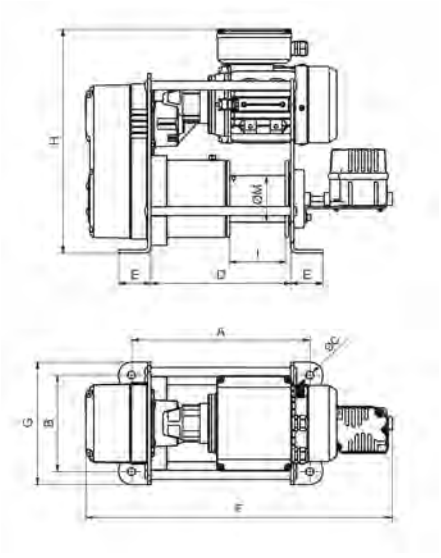

- Compact design.
- Two independently acting brakes.
- Ready for use with control/limit switch.
- Connection cable with plug.
- Test and maintenance friendly.
- Made in Germany.
- Available from stock and ready for immediate use after delivery.
- In accordance with the accident prevention regulations DGUV V54 (BGV D8) with special release for static suspension of loads above persons incl. expert.

Endless winch up to 500 kg!

STANDARD
This image shows the Yale Mtrac winch with standard equipment

PATENTED*

BI-DIRECTIONAL ACTUATOR

FOR BI-DIRECTIONAL LIFTING

*German Patent DE 10 2012 100 099

Yale *Mtrac*®

Endless winch

Capacity 66 - 500 kg

(two-fall design up to 1000 kg, optional)

The Yale *Mtrac*® endless winch combines state-of-the-art industrial design with technical innovation to solve a specific customer need – the need for a safe and simple handling solution for mobile applications.
We did just that. Because the rope of the endless winch is not collected during operation, there is no limit to the lifting height and traction length when using this product. And, with a full offering of wire ropes and accessories, this winch can be used in virtually any application requiring a hoist., e.g. on construction sites, in maintenance and assembly, in wind mills and power supply, water and utility sector, overhead line maintenance, etc.

Features

- Control pendant (IP 65-type of enclosure) is connected via a control cable.
- Standard power cable has a length of 1.0 m and is fitted with a CE connector plug (or a Schuko-plug.
- 42 V low-voltage control.
- Ergonomic, fitted carrying handle features a comfortable plastic grip.
- Mounting feet fixed on the housing for easy set up.
- Standard operating voltagesof 400 V, 3 Ph, 50 Hz or 230 V, 1 Ph, 50 Hz.
- Galvanized, high-density steel rope is 10 m long (dia. 6.5 mm) and features a safety hook on one end as well as a rounded, plastic-coated tip at the loose end.
- Two spring buffers with adjusting rings can be attached to the wire rope to set the limit switches for both upward and downward movement.
- Drive sheave is made of especially hardened steel designed to ensure long service life.
- The patented (German Patent DE 10 2012 100 099) bi-directional actuator ensures the rope is safely guided and securely held in place.
- Slip clutch is located outside of the load path for added safety.
- Limit switches ensure safe cut-out for the upper and lower hook positions.
- Electromagnetic brake holds the load safely, even in the event of a power failure.
- Winch is classified up to 1 Bm/M3 acc. to FEM/ISO.
- Winch is protected up to IP 55.

FEATURES

PATENTED* BI-DIRECTIONAL ACTUATOR

The Yale *Mtrac* endless winch features a unique bi-directional actuator that allows the winch to move the rated load on both ends of the rope. A hook can be fitted on the unloaded rope end (as an option) thus eliminating no-load motions. How does it work? Once the load has reached the top position, the unloaded rope end with the other hook is automatically in the bottom position and a new load can be picked up immediately. The lifting frequency is doubled as the two falls can be evenly loaded alternately with the rated load.

*German Patent DE 10 2012 100 099

READY TO USE

Each winch leaves our factory as a complete plug and play unit.
The control cable with control pendant is connected, as is the power supply cable with the plug. The standard design also features a wire rope complete with fitted safety hook. The carrying handle is included as standard and load-bearing feet are provided on the lower part of the housing.

STATE-OF-THE-ART INDUSTRIAL DESIGN

A compact and state-of-the-art design was at the focus of the Yale *Mtrac*. The housing is made of low-pressure, die-cast aluminum and the high-strength, glass-fiber reinforced plastic covers ensure low weight and outstanding rigidity. A carrying frame, available as an option, allows for easy, two-person transport and provides additional protection against damage when moving the unit or operating it in rough conditions.

VERSATILE APPLICATION

Mtrac winches can be used vertically, at an angle or horizontally for versatility depending on your application. Optionally, the load capacity can be doubled with two-fall reeving. Bolting points on the housing allow the customer to attach the winch in a way that best suits their application.

PROVEN TECHNOLOGY

Mtrac winches include reliable and proven Yale technology. The oil-bath lubricated and case-hardened gearbox has a helical gearing for smooth operation and a long service life. IP 55-rated motor enclosure ensures reliable operation of the winch for both indoor and outdoor applications.

BEST-IN-CLASS SAFETY

Standard winch models feature 42 V low-voltage control with built-in limit switches designed to stop the hoist when the hook has reached the upper or lower position. The operator can define the limit switch positions by simply relocating the spring buffers on the rope. The winch is also protected against overload by means of a slip clutch that is designed to guarantee a permanent connection between the load and the brake.

SIMPLE MAINTENANCE

Yale *Mtrac* winches are easy to service. Units are designed with a modular structure with all critical parts easily accessible. Re-adjusting the slip clutch and inspecting the brake is quick and easy as well. In addition, the handle, or carrying frame, can be quickly and easily assembled and removed.

ERGONOMIC DESIGN

Standard units have a comfortable plastic grip that allows for convenient one-person transport. The optional carrying frame features a grip on each handle, making two-person transport easy. And, because of the rounded housing, operator injury is minimized.

STANDARD

This image shows the Yale Mtrac winch with standard equipment.

Capacity up to 1000 kg

TWO-FALL DESIGN

with optional components such as suspension hook and bottom block.

Optional

BI-DIRECTIONAL LIFTING

To realize the full potential of this winch, operators can utilize the bi-directional actuator. Simply fit an additional hook at the loose rope end to take advantage of this unique feature. Once the hook is in place, the unit can be used in bi-directional lifting mode (two-hook mode). The actuator is mounted in the interior of the winch and ensures the rope smoothly runs in the drive sheave. It also extends the pressure surface of the rope on the drive sheave for safe friction contact. The two load falls are designed to alternately carry the rated load.

CARRYING FRAME

The carrying frame on the Yale Mtrac can be installed either at the top or at the bottom on the unit. It is ergonomically designed with plastic grips that ensure hand-friendly handling and carrying of the winch by two people. The carrying frame cannot be used as a load-bearing component; it is exclusively intended to protect the housing, e.g. while working, during storage or while transporting or carrying the winch. Two carrying frames can also be used (one at the top and one at the bottom).

CONNECTION TO TROLLEYS

If low headroom is required, the Yale Mtrac winch can be easily converted from the standard hook connection to a trolley mount using a Yale trolley. Manual and power-driven trolleys available on request.

Yale *Mtrac* winches with two carrying frames (optional) are extremely well protected and can be safely operated in any position.

The accessories for the two-part reeved option double the load capacity.

Optional

- The transport and carrying frames are designed to protect the housing.
  They must not be used as load-bearing components!
- Two-part reeving configuration doubles the load capacity.
- Additional hook kit for bi-directional lifting.
- Special voltages on request.
- Steel wire ropes of various lengths.
- Manual and electric trolleys.
- Frequency converter for variable speed control or smooth starting.
- Operating hours counter to determine the remaining service life and number of switching operations.
- Radio remote control with extended operation range.
- Varying lengths for power and control cables.
- Stainless steel wire ropes (with shorter service life than standard).

PATENTED*

BI-DIRECTIONAL ACTUATOR

FOR BI-DIRECTIONAL LIFTING

*German Patent DE 10 2012 100 099

Optional
Radio remote control

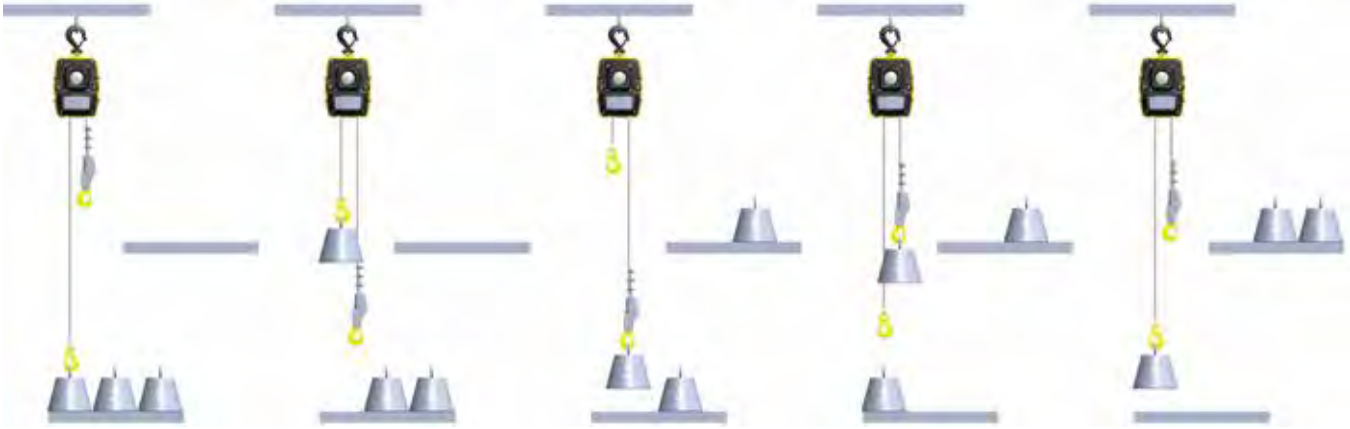

BI-DIRECTIONAL LIFTING

This image shows the Yale Mtrac's optional second hook that allows for bi-directional lifting operation.

The hooks of the two rope falls can be alternately loaded with 100 % rated load.

BI-DIRECTIONAL LIFTING

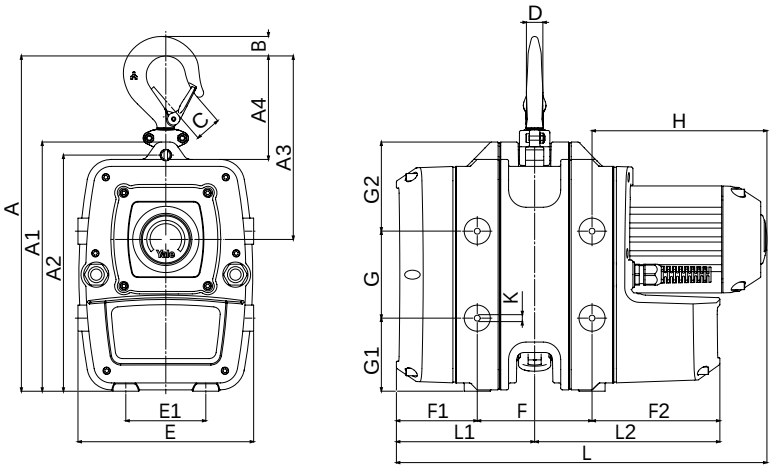

LIMIT SWITCHES AND LIMIT SWITCH ACTUATOR

The spring buffers attached to the rope trip the limit switch actuator when they contact the paddle, which in turn actuates the micro-switches that stop the hoisting motion (via the low voltage control).

INFO

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

Functional principle of cranks

Safety crank (Siku) and ratchet crank (Raku)

Lifting

By turning the crank (1) clockwise, all brake parts like friction discs (4), ratchet disc (3) and threaded hub (2) locked to a complete system. All components rotate in the same direction and the ratchet pawls (not shown here) engage alternately in the teeth on the ratchet disc. The load is hold securely in any position.

Lowering

If the crank will be rotate counterclockwise, the brake opens minimally. The ratchet disc is fixed by the ratchet pawls and does not rotate.

The load, which is either on the head or the claw, presses the housing down and causes the brake to close again. This process is repeated continuously when the load is released until the winch is unloaded.

With the safety crank (Siku), it is necessary to turn the crank through 360° when lifting and lowering.

The ratchet crank (Raku) works like a hand lever on a manual hoist. By switching the switch lever to lifting or lowering, this crank can be used like a ratchet. This is particularly useful in limited space. Furthermore, this type of crank can also be operated through 360°, as the same braking system as the Siku.

Safety spring crank (Sifeku) or safety spring lock with crank handle

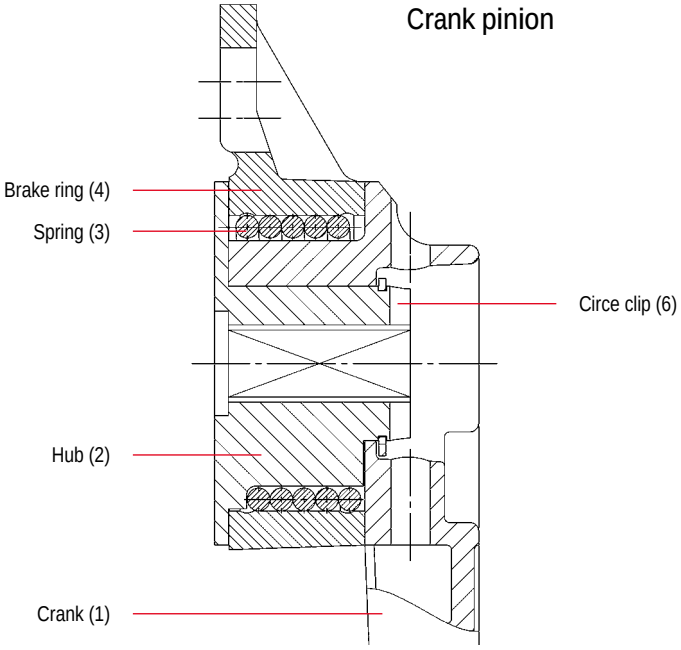

Lifting and lowering

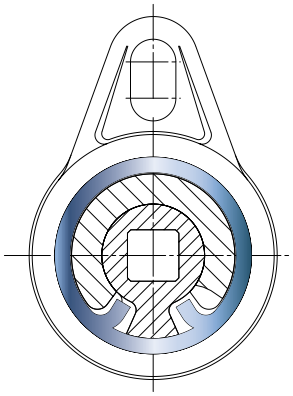

To generate the pre-tension, the spring (3) is manufactured with an oversize in relation to the brake ring (4) and installed.

The pre-tensioning torque which is generated corresponds at the same time to the no-load torque.

Turning the crank (1) clockwise the load will be lifted or supported.
Thereby the spring preload between spring (3) and brake ring (4) is increased.
In this case, the load is hold in any position up to the maximum braking torque and pressed against the brake ring.

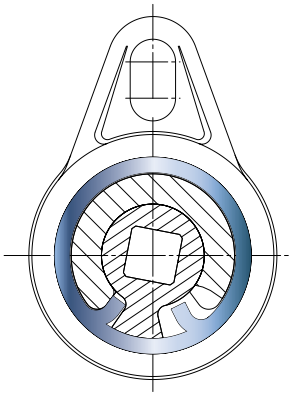

The lowering process works in the same way, except that the crank (1) is turned anticlockwise.

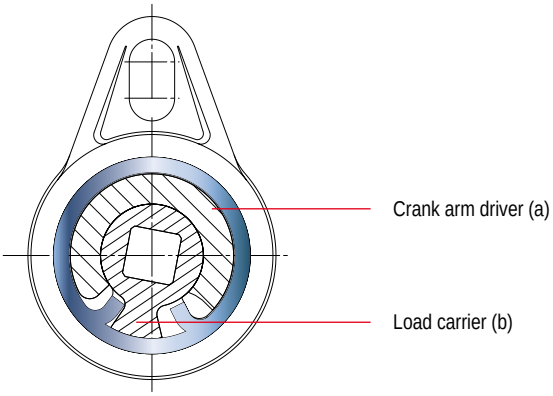

Brake new

the spring has sufficient movement in both directions

Brake, with braking torque

applied during lifting

Brake during lowering

Spring (3) is released by the crank arm driver (a) and closed again by the load carrier (b)

Sifeku
Spring loaded safety crank

- Without pawls
- Silent
- Recoil proof
- Maintenance-free
- Enclosed housing
- Weather and temperature resistant
- Braking effect at both ends
- The load is held safely at every height, in the pushing and pulling direction.
- Approved by the TÜV as an independent crank
- With folding handle

Crank with folding handle for rack and pinion jacks ZWW-L

SJ
Steel jack acc. to DIN 7355

Capacity 1500 - 10000 kg

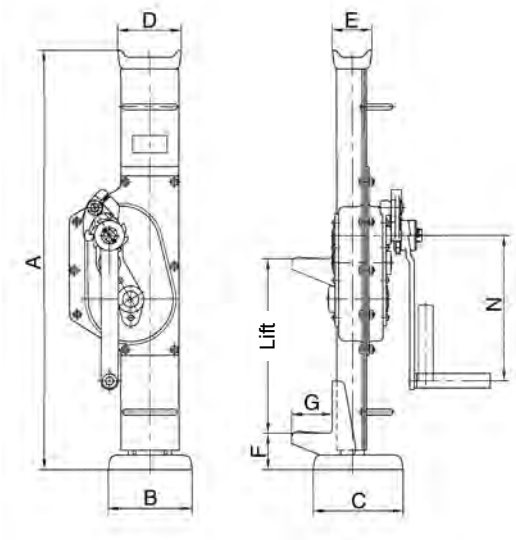

Mechanical steel jacks can basically be used to lift almost all kinds of loads in maintenance and repair, ship building, construction as well as agriculture.

Steel winches are used for supporting, placing lifted loads underneath and for assembly work.
The Raku as a standard crank enables working in limited spaces, as it can be used like a ratchet in the direction of lifting and lowering. Alternatively, you can work with the crank 360°.

The field of application includes maintenance and repair, shipbuilding, the construction sector and agriculture.

Features

- The precisely machined gear box with optimal gear ratio ensures a minimum of effort and smooth operation.
- The load is supported either on the claw or the head of the steel jack.
- By turning the operating lever the jack moves smoothly and conveniently up and down along the rack.
- The load is held securely in any position. Inside the load brake the axial brake pressure is generated by the load itself, thus, it is proportional to the size of the load.
- No reduction of capacity on the claw.

STW-F
Steel jacks acc. to DIN 7355

with fixed lifting claw

Capacity 1500 - 10000 kg

Steel jacks are traditional hoisting equipment for universal application in the forest and agricultural sector, in the industrial sector for assembly activities and many other fields of application.

Features

- The robust steel design and a toothed rack of solid material increase the service life of the jack.
- Low wear owing to hardened gearing parts and precisely machined teething.
- The precisely machined gears with a high degree of efficiency guarantees low crank forces.
- The load is supported either on the claw or the head of the steel jack.
- Robust base plate for a high level of stability.
- No reduction of capacity on the claw.

STW-V
Steel jacks acc. to DIN 7355 with adjustable lifting claw

Capacity 1500 - 10000 kg

The design of the steel jack allows for loads to be picked up and lowered from different heights over the entire length of the steel jack.
The adjustable claw is simply set to the appropriate application height in the load bar for this purpose.

Features

- The claw can be moved to any position on the adjusting rail.
- The load is supported either on the claw or the head of the steel jack.
- Robust base plate for a high level of stability.
- No reduction of capacity on the claw.

Yaletaurus
Ratchet jack

Capacity 10000 kg

Mechanical ratchet jacks with lifting claw are designed for operation in confined areas where space below the load is restricted, thus preventing the use of traditional lifting equipment. The Yaletaurus is the ideal unit for lifting, positioning or transportation of machines resp. heavy objects as well as for repair and assembly jobs in cramped areas and under toughest conditions.
In spite of its capacity of 10000 kg the Yaletaurus has a weight of just 30 kg and the integrated carrying handle makes it a portable, versatile tool.
With a hand force of 45 kg on the detachable hand lever, the Yaletaurus will lift, press, push or lower a load of 10000 kg in any direction. A standard crank wheel will bring the jack quickly to the required position.

Features

- Automatic screw-and-disc type load brake.
  The axial brake pressure is generated by the load itself and is, therefore, proportional to the size of the load.
  The load is held secure in any position.
- Single part housing made from spheroidal cast iron with integrated lifting claw.
- The screw-and-disc type load brake originates from the Yale PUL-LIFT® (spare parts are easily available).
- Low lever pull and long life endurance due to optimum gearing and high quality materials.

ZWW-L and ZWW Rack & pinion jacks

Capacity 300 - 10000 kg

Wall-mounted rack and pinion jacks are used for lifting, lowering, pulling and pushing of loads.

Features

- Robust steel design with precisely machined worm and spur gears for smooth and easy manual operation.
- Solid steel rack with additional bore hole for fastening of the load.
- Low wear owing to hardened gearing parts and precisely machined teething.
- Up to 1200 kg lifting load for pushing or pulling loads are equal.
- At standard tensile load from 1500 - 10000 kg. Compressive load possible on request.
- Rigid wall mounting.

Optional

- Improved corrosion protection owing to zinc-plating or special coating of rack (from capacity 1500 kg).
- Different rack length on request.
- Symmetrical toothing for model ZWW on request.
- Crank with folding handle for ZWW-L.

INFO

ZWW-L with capacities of 600 and 1000 kg are also available in explosion-proof design.

We are pleased to send you our new Atex catalogue in PDF format.

ZWW-L, capacity 300 - 600 kg

ZWW-L, capacity 1200 kg

ZWW, capacity 1500 - 10000 kg

On systems with several racks
in line at 90° to the crank axis

- Self-locking action only gear unit with crank
- Crank force = 15 kg,
  at a maximum total load of 1000 kg
- Connection to 1" Rohr (DIN 2440) on building side
- This combination is also possible for ZWW-L 300 and ZWW-L 600.

ZWW-L combinations

Capacity 1200 kg

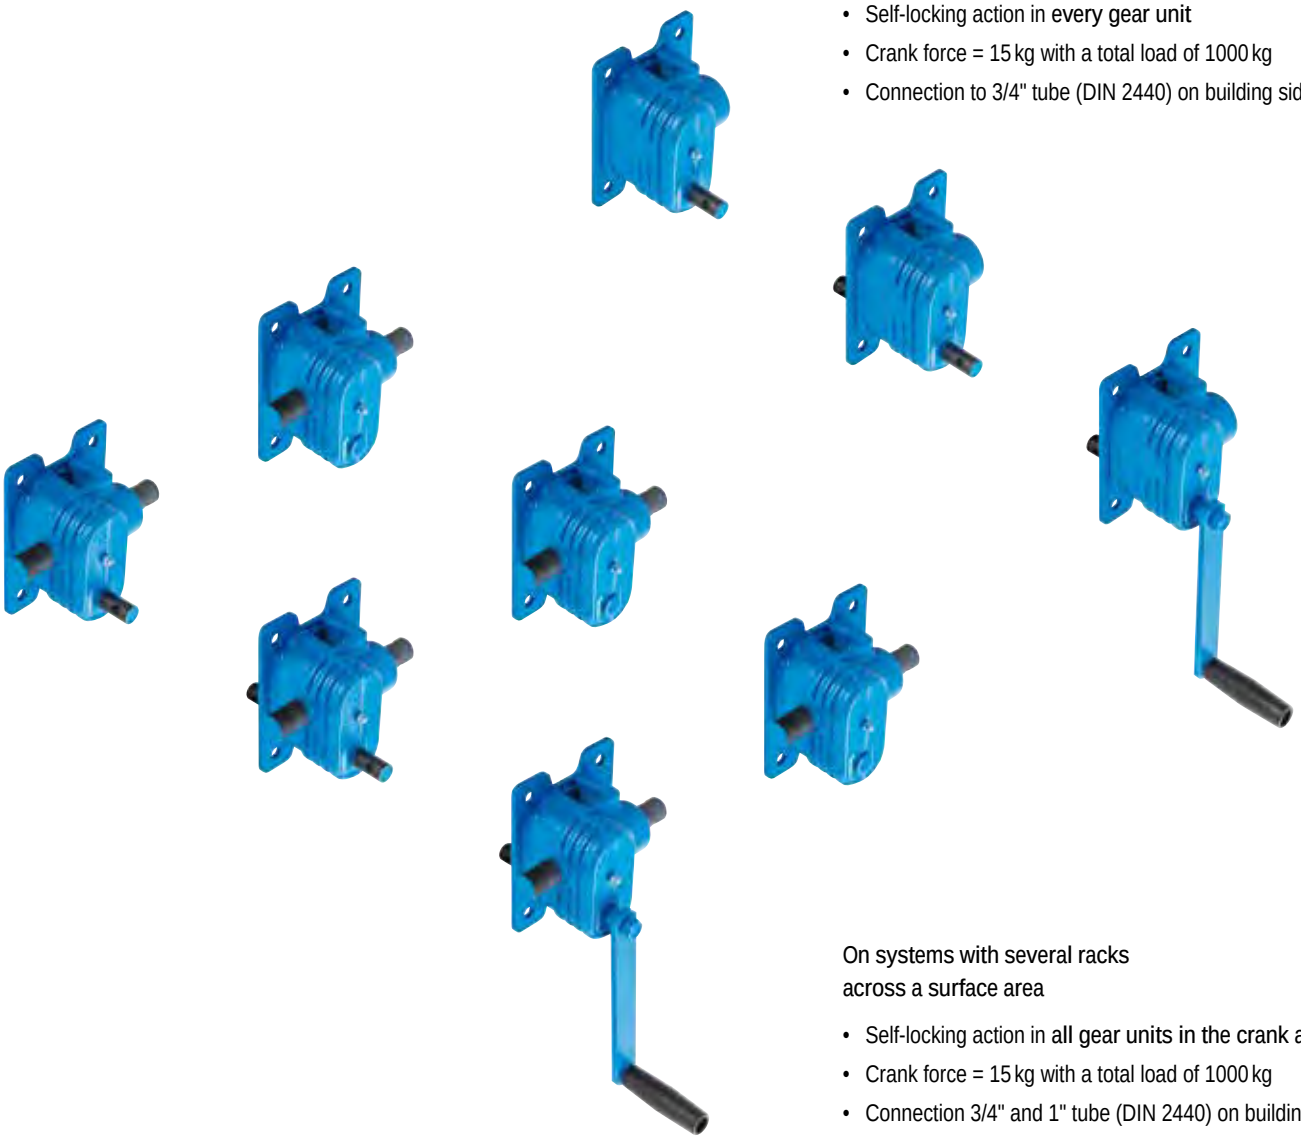

Where it is important to lift as evenly as possible (level-ling), wall-mounted rack and pinion wall jacks can also be coupled, whereby the direction - depending on the model - is irrelevant.

The wall mounted rack and pinion jacks can be combine about 3/4" and/or 1" pipes (DIN 2440). When connecting pipes over a length of 2 m, we recommend the pipes to stabilize so that it does not droop in the middle.

We like to advise you in this case.

On systems with several racks
in line to the crank axis

- Self-locking action in every gear unit
- Crank force = 15 kg with a total load of 1000 kg
- Connection to 3/4" tube (DIN 2440) on building side

On systems with several racks
across a surface area

- Self-locking action in all gear units in the crank axis
- Crank force = 15 kg with a total load of 1000 kg
- Connection 3/4" and 1" tube (DIN 2440) on building side

Crank
in special design
on request
Art.-No. N00190074

HB-W
Lifting jack

Capacity 1500 kg

The stable lifting jack with integrated 1.5 t steel jack for supporting tube and bar material.

Features

- Load will be fixed in each position safely by a load brake system.
- Large base plate for a high level of stability.
- Wheels for easy transport.

Optional

- The attachable support roller facilitates the sliding of heavy loads.

Technical data HB-W

KHB
Truck body lifting jack

Capacity 5000 and 8000 kg

Truck body lifting jacks are used for supporting vehicle bridges, swap bodies and trailers; they are also used in vehicle construction and freight forwarding applications.

Features

- High-quality, torsionally stiff steel design with large base plate for a high level of stability.
- Hardened gearing parts and precisely machined teeth-ing for improved handling and low wear.
- The load can either be supported on the head or on the adjustable claw.

Model S 20

Model S 24

S 20 and S 24
Worm gear drive unit

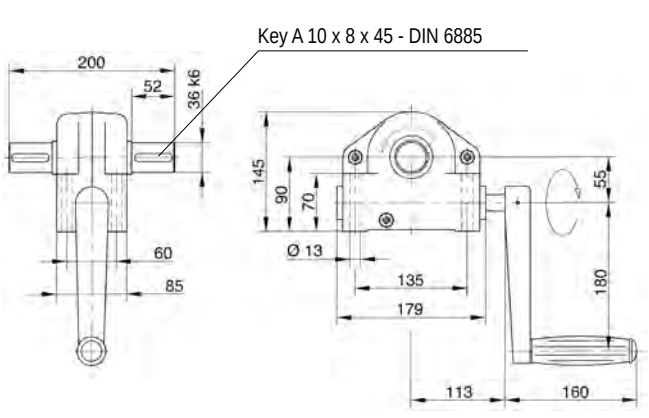

The worm gear drives are suitable for a large variety of applications in construction for moving or turning loads, as gears for rope drums or chain sprockets or slewing drives.

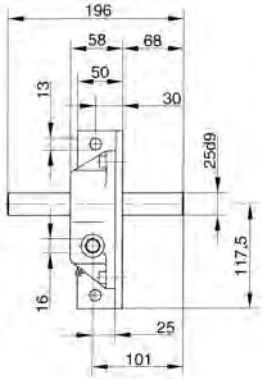

Features

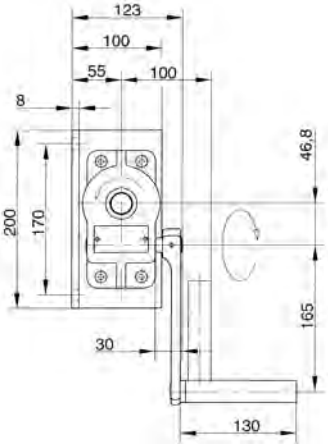

- Enclosed housing for the protection of parts inside.
- Enclosed and precisely machined gear for little effort and a long service life.

SCH-W
Sluise gate jack

Capacity 1500 - 10000 kg

The reliable sluice gate jack for opening and closing gates in sluices.

Features

- The spring loaded safety crank permanently holds the sluice gate closed with pressure.
- Hardened gearing parts and precisely machined teeth-ing for improved handling and low wear.

Technical data SCH-W Sifeku

Arrangement

Crank version

(Retaining springs not possible for 10 t model)

Date

Name

Application

INFO

This user information presents a general review regarding the application of cranes and does not substitute the existing operating instructions for specific products!

Lifting and slewing operations may be carried out by competent users (trained in theory and practice) only. When operated correctly, our cranes will offer the highest degree of safety in line with long life expectancy and avoid damage to products and people.

Yalesystems cranes are manufactured in accordance with the machinery directive 2006/42/EC and the latest DIN 15018 H2 B2 (gantry cranes H2 B3) and correspond to the VDE regulations.

All components are mechanically shot blast, then primed and coated with RAL 1023 (yellow) paint, D.F.T. approx. 60 micron.

Modification of delivery condition

Design and finish of the cranes may not be modified by e.g. installation of outside supplied parts, bending, welding, grinding, removal of parts, added bores, removal of safety devices like locking mechanisms, locking pins, safety latches etc.

Limitations of operation

Temperature

Cranes may normally be operated at ambient temperatures between -10°C up to +50°C. These values are approximate and may deviate from the specific givings of the product concerned. The accurate data are given in the current operating instructions.

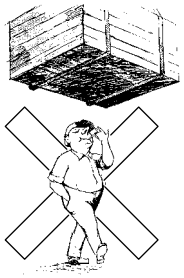

Chemicals

Cranes may not be operated without hesitation in the area of chemicals or chemical vapours – consult our specialists for advice. Cranes which have been subject to chemicals or vapours must be taken out of service and inspected by us.

Transport of people

Transport of people with cranes is generally forbidden!

Operation in danger zones

Lifting or transport of loads must be avoided while personnel are in the danger zone. People are not allowed to pass over or under a suspended load.

Electrical hazards

Please consult the specific operating instructions for possible electrical hazards. Electrical connections may only be performed by authorized persons resp. companies!

Maintenance and repair

To ensure safe operation, all cranes must be subjected to regular inspections according to the maintenance instructions given by the manufacturer. For legal obligations refer to DGUV Vorschrift 52 (BGV D6).

Depending on the frequency and impact of applications, the crane has to be maintained, at least once per year or in case of obvious damages, by competent persons resp. inspectors.

Repairs and inspections may only be carried out by competent persons resp. inspectors who use original spare parts. Repairs and inspections must be recorded consecutively.

Inspections

The contractor has to make sure that powered cranes are inspected prior to initial operation and after significant modifications by a competent person. This is also applicable for hand operated cranes with a capacity of more than 1000 kg.

For cranes according to § 3a para. 3 DGUV Vorschrift 52 (BGV D6) the inspection before initial operation consists of advance survey, inspection of building and quality acceptance.

The inspection prior to initial operation is not required for cranes, which are delivered ready-to-use and with certificate of a type approval or EC declaration of conformity.

INFO

You will find the General Terms and Conditions at the end of the catalogue.

Please note the information on our training courses on page 4.

Technical questionnaire to identify the suitable crane system

or: highest hook position		_____	mm

Accessories
- ☐ Increased paint thickness
- ☐ Hot-dip galvanizing

Power supply
- ☐ Round cable
- ☐ Festooned cable
- ☐ Suspended control

Trolley
- ☐ With push trolley
- ☐ With geared trolley
- ☐ With electric trolley (single speed)
- ☐ With electric trolley (2 speeds)

INFO

Mounting supports and walls are within the responsibility of the user.

Scope of delivery

- The electrical system is equipped with a lockable main switch, round cable power supply with cable support pipes for booms up to 4000 mm.
- From 4500 mm upwards, the boom is equipped with a festooned cable power supply. Due to cable sag on low cranes, we recommend the use of festooned cables even on short booms.
- Trolley stoppers at the front and at the back.
- Cranes are supplied with an operating manual and complete manufacturer's documentation.

PMS
Wall-mounted jib crane

Elevated boom with optimal height, slewing range 180°

Lightweight, twist-free steel girder construction with low headroom. The boom is fitted with a bearing and a wall bracket for anchoring the crane to a concrete wall.

Mounting a jib crane to a wall, in combination with a festooned cable system, may lead to restrictions in the slewing range of the boom. This being the case, slew stoppers (buffers) should be fitted accordingly.

Mounting

- Wall mounting, using threaded rods that go through the wall and that are bolted to the wall with counter plates and nuts.
- Pillar embracing with anchor bolts and wall bracket. Bracket plate max. 500 mm, anchor bolts (threaded rods) max. 1000 mm.
- Alternative mounting systems on request.

Optional

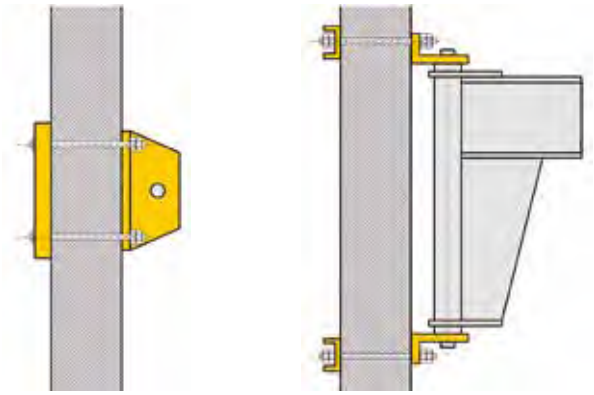

- Slew stoppers (buffers) can be fitted on building site for a pre-determined fixed slewing range.
- Slewing brake, to control the boom speed during slewing. Recommended for a boom length of more than 5 m or a headroom of more than 4 m. This prevents uncontrolled movement of the boom.
- Increased paint layer (120 µm) or hot-dip galvanisation for outdoor use.
- Manual locking device, to hold the boom in a fixed position (wind protection).
- Hoist cover for outdoor use.

Standard delivery programme PMS

Mounting systems wall-mounted jib cranes

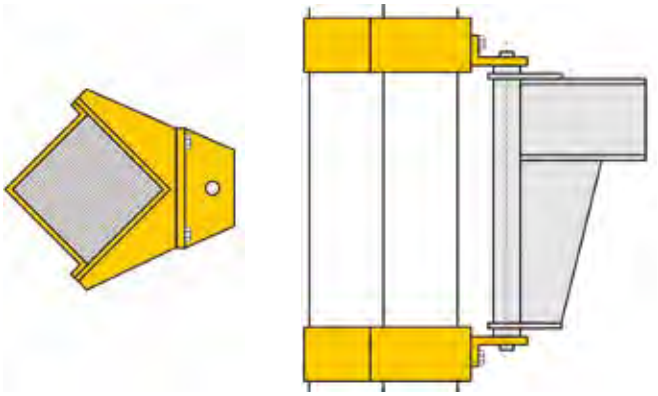

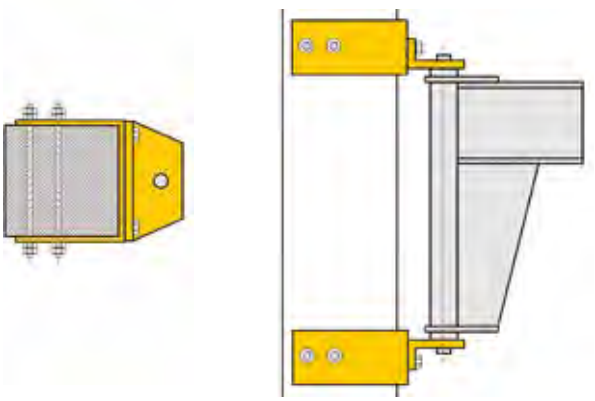

Wall mounting, using threaded rods going through the wall and being fixed to the wall with counter plates and nuts

Pillar embracing with anchor bolts and wall bracket (bracket plate max. 500 mm, anchor bolts max. 1000 mm)

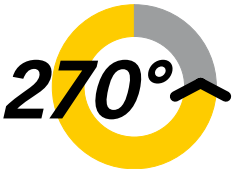

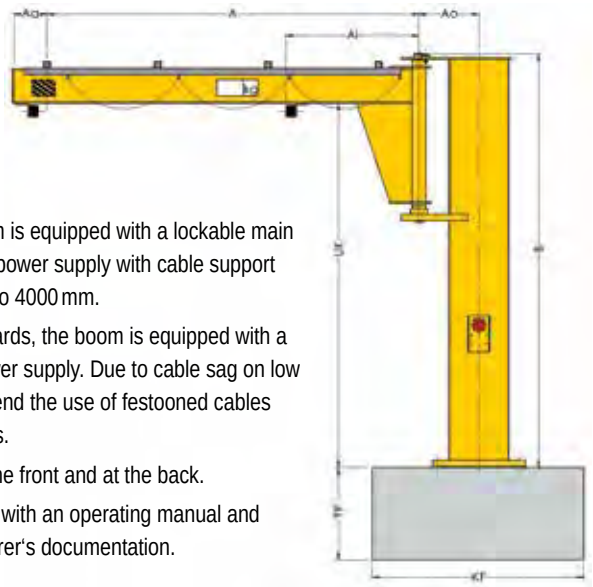

INFO

If wall-mounted jib cranes are mounted directly on the wall and festooned cable power supply is used, the slewing range may be limited depending on the size of the hoist.

Further fastening possibilities such as weld-on brackets, ceiling mounting etc. on request.

Scope of delivery

- The electrical system is equipped with a lockable main switch, round-cable power supply with cable support pipes for booms up to 4000 mm.
- From 4500 mm upwards, the boom is equipped with a festooned cable power supply. Due to cable sag on low cranes, we recommend the use of festooned cables even on short booms.
- Trolley stoppers at the front and at the back.
- Cranes are supplied with an operating manual and complete manufacturer's documentation.

PFSP
Floor-mounted jib crane

Elevated boom with optimal height, slewing range 270°

Lightweight, twist-free steel girder construction with low headroom. The boom is fitted with a bearing, pillar made from reinforced steel pipe.

Depending on the size of the hoist and in combination with festooned power cables, restrictions in the slewing range of the boom may be possible.

Mounting

- Base flange with anchor bolts and template.
- Anchoring the base plate (welded) including mortar cartridges, anchor studs (complete with nuts, locknuts and washers).
- Anchoring the dowel base plate (bolted) including mortar cartridges, anchor studs (complete with nuts, locknuts and washers).
- Mobile unit for changeable location.

Optional

- Slew stoppers (buffers) can be fitted on building site for a pre-determined fixed slewing range.
- Slewing brake, to control the boom speed during slewing. Recommended for a boom length of more than 5 m or a headroom of more than 4 m. This prevents uncontrolled movement of the boom.
- Increased paint layer (120 µm) or hot-dip galvanisation for outdoor use.
- Manual locking device, to hold the boom in a fixed position (wind protection).
- Hoist cover for outdoor use.

Lifting and travelling	100*	100*	500
Lifting, travelling and slewing	100*	100* (500)	500

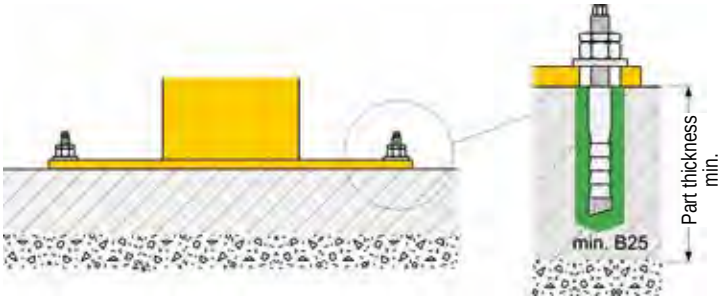

Safety distances for cranes with a load capacity up to 10000 kg
*No regulation (100 mm recommended)
Ss... for power-driven slewing motion, the safety distance must be complied with, if the possible crushing point is within the traffic and working area.
In general, the traffic and working area ranges from the upper edge of the ground up to 2.5 m room height.

Mounting systems for floor-mounted jib cranes

Anchor bolts with template for preparation of the foundation through the customer.

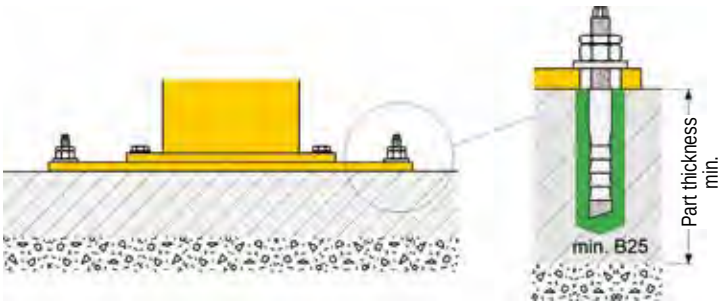

Standard base plate (welded) for anchor-bolt connection on existing concrete floor instead of welded-on base flange (only for operation inside a building) incl. HVZ dynamic anchor bolts.

INFO

Further capacities and boom lengths on request.

Further fastening possibilities such as weld-on brackets, ceiling mounting etc. on request.

Dowel base plate for anchor-bolt connection on existing concrete floor (only for operation inside a building) incl. HVZ dynamic anchor bolts.

INFO

Operating conditions for standard and intermediate base plates

- The thickness of the concrete floor slab for M 12 x 95 HVC dynamic anchor bolts must be min. 190 mm.
- The thickness of the concrete floor slab for M 16 x 105 HVC dynamic anchor bolts must be min. 210 mm.
- The concrete floor slab must be horizontal and even.
- The concrete quality must meet min. B25 or C20/25.
- Mounting with through bolts consisting of base plate, through bolts and counter plates (for ceiling thicknesses up to 350 mm).
- Floor/wall mounting or floor/ceiling mounting on request.

Base plate for fastening pillar-mounted slewing jibs and slewing cranes without foundation

Some pillar-mounted slewing jibs and slewing cranes can be mounted by means of a standard base plate or an dowel base plate. No foundation is required, easy and quick assembly on the customer's existing reinforced concrete slab is possible. Potential tripping hazard by protruding locknuts, unmarked or unsecured plate edges must be clearly marked.

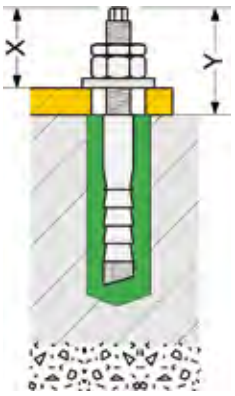

- The installation location of the crane must be selected in such a way that the base plate is mounted outside of traffic routes according to the German regulations for workplaces AStV para. 2. If this is not possible, the plate must be secured or marked in such a way that a hazard is avoided (e.g. by warning hatching along the edge of the plate).
- The base plate with tripping points must not protrude into escape routes or limit their prescribed min. widths.
- The measures for reducing hazards caused by tripping points must be taken by the operating company in cooperation with the safety expert.
- A warning sign as hazard reduction is a minimal measure and may not be sufficient in certain cases (e.g. in spite of warning signs, tripping incidences occur frequently, the warning sign is not recognised sufficiently in advance).

INFO

Plate dimensions, quantity, dimension and position of the chemical anchors depend on the crane type, load capacity and boom length of the crane (details and technical data according to the relevant crane data sheet).

Due to cable sag, we recommend that on low cranes festooned cables be used, even for a short boom length.

The smallest possible projection of the chemical anchor over the crane base plate "X" with an M12 anchor is approx. 33 mm, with M16 approx. 37 mm. This dimension can only be reached, if the concrete floor slab exceeds the above-mentioned min. thickness. The max. projection of the chemical anchor, measured from floor level "Y", is approx. 73 mm for M12 anchors and approx. 86 mm for M16 anchors, with the relevant min. floor slab thickness.

TDL
Moveable gantry crane

Yalesystems gantry crane for use in all areas, from crafts-man's workshops, garages and industrial use. They are suitable for low to medium weight capacities and are also for outdoor use.

The cranes are moved by hand and are not dependant on a rail system.
The guidelines for moving Yalesystems gantry cranes and transporting loads should be strictly followed.

Optional

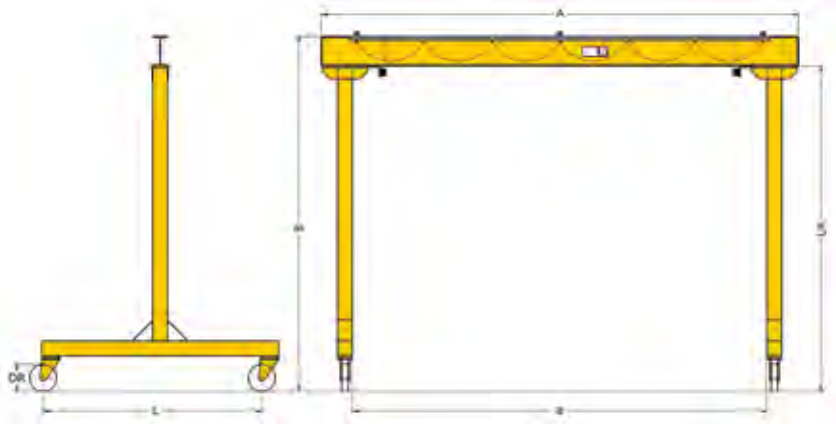

- Increased paint layer (120 µm) or hot-dip galvanisation for outdoor use.
- Hoist cover for outdoor use.
- Parking brake by threaded spindle.
- Power supply by festooned cables incl. flat cables, C type mounting rail, cable trolley, support arms and towing trolleys.

Scope of delivery

- 3-part construction with 2 robust rectangular steel-bar supports and 1 load carrier beam.
- Manually moveable
- Cranes are supplied with an operating manual and complete manufacturer's documentation.

INFO

Further capacities and boom lengths on request.

Standard delivery programme TDL

TDL-2000/TDL-3000: Boom length A less 500 mm

Festooned cable system

The Yale festooned cable system kit contains all the parts necessary to install a power supply.

Features

- The PVC flat cable 4 x 2.5 mm² is suitable for all electric hoists with a power consumption of up to 25 A.
- The line sag is 700 mm. The cable and towing trolleys are made from plastic and can carry loads of up to 10 daN.
- The rollers are fitted with bronze bushes resp. ball bearings.
- The C-rail, rail support brackets and rail connectors are zinc-plated for added protection against corrosion.

Optional

- Mounting kit consisting of support arm and girder clips for connection to the beam.
- Towing arm for towing trolley.

Scope of delivery

- 1 end clamp
- 1 end stop
- 1 towing trolley
- 2 end caps
- 2 FI-fittings with locknuts
- 2 FI-fittings with locknuts 400 V, 50 Hz
- Two information signs according to UVV

Tigrip® Load Hoisting Tackle

Tigrip® Lifting clamps and attachments have a reputation for reliability, quality and safety going back more than 35 years.
For transportation and handling of loads with a hoist the Tigrip® programme offers the optimum connection between hook and load for almost any application.

Tigrip® Crane Weighers

Also renown for many years are our precise crane weighers. Wherever weight has to be measured or forces have to be assessed the reliable and robust units can be used. Areas of application are practically unlimited.
Tigrip® - your first choice!

Use Operating Instructions!
W.L.L.

INFO

This user information presents a general overview regarding the operation of some plate clamps and does not substitute the existing operating instructions for specific load hoisting tackle!

Lifting operations with load hoisting tackle may be carried out by competent persons (trained in theory and practice) only.

When operated correctly, our Tigrip products will offer the highest degree of safety, avoid damage to products and people and present a long life expectancy.

Modification of delivery condition

Design and construction of the load hoisting tackle may not be altered without authorization of the manufacturer, e.g. by bending, welding, grinding, cutting-off parts, adding boreholes, removal of safety devices like locking mechanisms, bolts, shear pins etc. Otherwise the validity of the declaration of conformity will be void and any liability and warranty of the manufacturer ceased.

Limitations of operation

Loading

The rated capacity (WLL) indicated on the tackle is the maximum load which must not be exceeded.

Temperature

Clamps without protective lining may normally (depending on manufacturer) be operated at ambient temperatures of -40°C up to +100°C without capacity reduction. Clamps with protective lining may be subject to reduced temperature areas due to application of affixed linings, e.g. model TBP and TSB, which can be operated from -20°C up to +40°C.

Shock loading, swinging of load

The indicated capacities are based on shock-free loading of the tackle. Light bumps as occurred during lifting and lowering as well as transporting of load with the crane are admitted. Heavier shock loadings (e.g. crashing against obstacles during transport) as well as swinging of the load are strictly forbidden!

Chemicals

Load hoisting tackle may not be operated without hesitation in the area of chemicals or chemical vapours – consult our specialists beforehand. Hoisting tackle which has been subject to chemicals or vapours must be taken out of service and should be returned to us for inspection.

Transport of people

Transport of people with hoisting equipment and tackle is generally forbidden!

Operation in danger zones

Lifting or transport of loads must be avoided while personnel are in the danger zone. When using clamps or grabs without a positive fit but with force fit or friction fit the load must not be suspended above people – see AMVO §18(6)!

Lifting products

Load hoisting tackle have been designed for specific applications and must not be used for other jobs without prior authorization of the manufacturer. This refers e.g. to the thickness of material (jaw capacity of the clamp), surface condition, hardness* and temperature of material. Relative information is given in the respective operating instructions. These have to be available to the operator to ensure safe handling of the product.

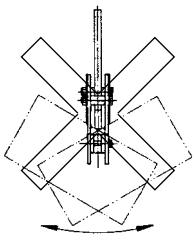

*Please observe that for special steel plates the surface hardness may deviate substantially from the core hardness, e.g. for cold work steel.

Inspection before initial operation

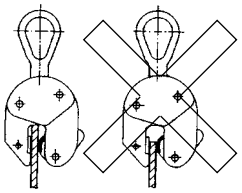

- Ensure that the surface of the steel plate, in the area where the clamp is to be attached, is dry and free from grease, paint, dirt and scale and is not coated, so that the teeth resp. the protective lining on the moving jaw can make good contact with the surface of the load.
- Check the fixed jaw and the moving jaw for wear and defects. Both jaws must have clean profiles and teeth must not be heavily worn (observe respective advice given in the operating instruction, guiding value max. 30% wear). Protective linings must not be contaminated, damaged, uneven or heavily worn.
- The entire hoisting tackle has to be checked for damage, corrosion, cracks or deformations.
- It should be easy to open and close the clamp.
- Check the function of the spring. In the CLOSED position this must present a noticeable spring pressure force when the hook ring is pressed down.

Application advices

- Load hoisting tackle must always be in perfect condition and provided with a legible identity plate.
- Prior to initial operation and every time before work, the tackle is to be visually inspected for obvious deficiencies!
- The suspension eye must have sufficient space in the load hook and move freely. A safety latch to prevent accidental out-hooking of the tackle must be available!
- Do not lift or transport loads while personnel are in the danger zone and do not allow people to pass under a suspended load. Note: a safe form-fit attachment requires sufficient hardness of the load. Ensure that the load or parts thereof cannot slip and fall down!

- The load hoisting tackle must be positioned over the gravity centre of the load, so that a swinging movement is avoided.
- If longer sheets of metal or profiles are to be transported, we recommend using two clamps to prevent load swinging. The clamps can be used in combination with a spreader beam or with double strand chain slings and clamps with hinged hook ring (e.g. model TBS). Observe the maximum angle from the vertical and possible capacity restrictions.
- Clamps without hinged hook ring must not be loaded laterally! (Slanted attachment of the clamp onto the steel plate in pulling direction of the clamp is normally not permitted, as the jaws would grip too close to the edge of the plate. Thus a correct fit of the clamp on the plate is not assured!)
- Always insert the load fully into the mouth of the clamp and make sure that the housing has contact on either side of the plate.

- Clamps designed for the transport of steel plate in vertical position may only accept one single plate at a time. The clamping effect must be assured on either side of the load!
- Special clamps are available for the transport of steel plate in horizontal position which allows handling of several plates at a time.
- A load must not be suspended or left unattended in raised or tensioned condition for a longer period of time.
- When attaching the clamp, the operator must ensure that neither the clamp, slings or load pose a danger to himself or other personnel.
- The operator may not move the load until he is convinced that the load is correctly attached and all personnel are outside the danger zone.
- Please take note of possible capacity restrictions depending on the pivoting range resp. pulling direction of the clamp. (Note: Not all clamp types on the market are designed for a pivoting range of 180° – strictly observe the operating instructions!)
- In case of malfunction stop using the load hoisting tackle immediately.

INFO

INFO

Due to the limitations of space in this catalogue we could not respond to all applications.
Please contact us for further information!

INFO

Maintenance and repair

- To ensure safe operation, all load hoisting tackle must be subjected to regular inspections according to the maintenance instructions given by the manufacturer.
- Load hoisting tackle which are due for maintenance (normally once per year, unless adverse working conditions dictate shorter periods) or products with obvious defects may be returned to us for inspection and repair.
- Inspections and tests must be performed by competent persons or specialist workshops that use original spare parts.

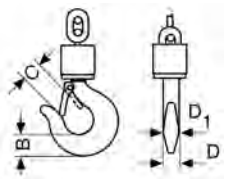

Inspections

- Inspections are visual and functional and shall establish that the load hoisting tackle is safe and has not been damaged by incorrect transport or storage. In addition check for damage, wear, corrosion and other deficiencies as well as completeness and function of safety devices. Inspections are instigated by the user.
- All load hoisting tackle has to be cleaned prior to inspection. The cleaning procedure must not cause chemical damages (e.g. no acid – embrittlement), no incorrect temperature stress by e.g. flame cleaning or possible concealment of cracks due to excessive material loss (sand blasting)! We shall be pleased to consult you in this respect. Please submit your load hoisting tackle for inspection in clean condition. This will reduce inspection costs considerably!

Criteria for disposal of load hoisting tackle

Load hoisting tackle must no longer be operated if e.g. :

- The identification (identity plate) is missing or illegible.
- Housing, components and suspension of the tackle present obvious deficiencies, e.g. cuts, grooves, cracks, excessive corrosion, staining due to heat, signs of subsequent welding resp. spatters (which cannot be easily removed) and leave stains.
- Ropes show breakages of wires resp. bruises (criteria for disposal of ropes are given in classification DIN 15020), damages to the rope sleeve and similar failures.
- The load chain presents twisted or distorted links or shows an elongation of 5 % resp. undergoes the averaged nominal thickness of the link by more than 10 %.
- The opening (C) of either suspension or load hook has increased/deformed by more than 10 % of the nominal dimension or shows wear in the hook mouth (dimensions B resp. D) of more than 5 %.

- If the inspection revealed that the tackle has been overloaded or deteriorated it can only be used again after careful inspection and repair – if necessary.

INFO

You will find the General Terms and Conditions at the end of the catalogue.

TBL/TBL plus Plate clamp with safety lock

Capacity 500 - 3000 kg

This clamp is primarily used for transporting single steel plates in the vertical position, as well as lifting and turning through 180°. This clamp can also be used for transporting steel constructions and profiles. It is recommended to use a pair of plate clamps in conjunction with a spreader beam for large sized sheets and long materials which have a tendency to sag.

The jaw can be opened and closed with the locking lever (except for the TBL 0.5 t which uses a positive spring-loaded cam). The safety lock overrides the spring-loaded cam, preventing the clamp from opening even when there is no load.

This plate clamp is service-friendly, making it easy to exchange parts, which are available individually or in kits. Clamp repair is available by the factory, or can be done by certified and experienced staff.

The TBL 0.5 is equipped with a safety lock (positive spring-loaded cam), but comes without locking lever.

INFO

The surface hardness of the material must not exceed HRC 30/Brinell 300.

The min. load is 10 % of the nominal WLL, except for model TBL 1,5 plus, the min. load here is 100 kg.

TBL
Plate clamp with safety lock

Capacity 4000 - 30000 kg

This clamp is primarily used for transporting single steel plates in the vertical position, as well as lifting and turning through 180°. This clamp can also be used for transporting steel constructions and profiles. It is recommended to use a pair of plate clamps in conjunction with a spreader beam for large sized sheets and long materials which have a tendency to sag.

These plate clamps have the same design and applications as the clamp model TBL with a capacity from 500 - 3000 kg.

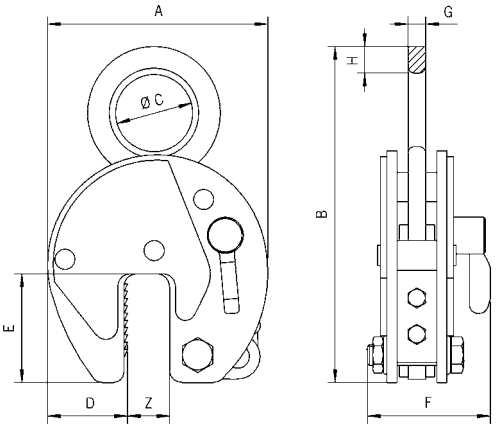

INFO

The surface hardness of the material must not exceed HRC 30/Brinell 300.

The min. load is 10 % of the nominal WLL!

TBS plus
Plate clamp with hinged hook ring and safety lock

Capacity 1000 - 3000 kg

The TBS plate clamp with hinged hook ring can be used for the safe handling of plates at various angles. It can lift plates from the horizontal and put down in the vertical or alternatively lift it over the edge by gripping it from the side. The hinged hook ring ensures adequate clamping force in every position. Depending on the angle of usage capacity restrictions have to be taken into account, as shown in the diagram below.

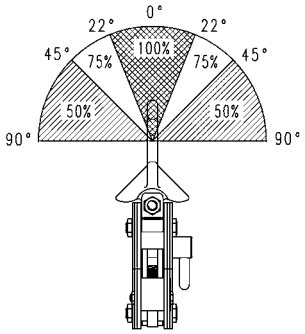

The hinged hook ring has the added advantage of providing enough clamping force to hold a plate safely. Even when transporting large-sized plates with the 2-legged lifting system slipping of the load and damage to the clamp is avoided.

In addition to transporting plates, this clamp is suitable for turning steel structures and welded constructions.

INFO

The surface hardness of the material must not exceed HRC 30/Brinell 300.

The min. load is 10 % of the nominal WLL!

TAG
Universal grab

Capacity 350 - 5000 kg

TWG
- with modified side plates

Capacity 750 - 1250 kg

The universal grabs TAG and TWG save time, as it does not require chains, cables etc. when hoisting and loading material.

The large jaw capacity allows to tackle a variety of sizes with only one clamp. It can be used for loading machine tools, lifting steel constructions, welding and assembly jobs as well as for concrete and prefabricated pieces.

The universal grab with a small outside measurement is a specially designed grab for use on hard to reach places (e.g. lathe machine).

Features

- The automatic clamping force is retained by a positive tension spring, even if there is slack in the chain.
- The “Quick-Open” type universal grab opens by lifting and simultaneously pulling the lever out against the tension spring. The jaw is closed by the spring.
- Universal grabs up to 2.0 t capacity are equipped with round chains, clamps with increased capacities are delivered with roller chains.

Optional

- Model TAG up to 1.25 t WLL is available with protective lining on the clamping jaws on request. This results in a decrease of the jaw capacity by 10 mm.

INFO

The surface hardness of the material must not exceed HRC 30/Brinell 300.

The min. load is 10 % of the nominal WLL!

TWG with modified side plates for use in confined spaces (e.g. lathe machine).

TPM
Permanent load lifting magnet

Capacity
100 - 3000 kg (Flat material)
50 - 1500 kg (Round material)

TPM load lifting magnets are ideal tools for easy, quick and thus economical transport of heavy objects made of ferro-magnetic material. Typical operating areas are workshops and warehouses, loading and unloading of machines as well as construction of jigs and fixtures.

Compact design of the units for a large number of applications.

The load is not affected mechanically which allows lifting of flat as well as round material. The efficient magnet body provides strong lifting capacity at low dead weight. The permanent magnets do not require electric energy and will leave only minor residual magnetism on the material after use.

The magnets are activated/deactivated easily by turning a locking lever. In activated condition the hand lever will be safely locked and thus prevent unintended demagnetising.

The selection of the appropriate magnet model should be made under consideration of the varying conditions of the contact surface, kind of material alloy and plate thickness/ bar diameter (see table).

INFO

In order to achieve a maximum capacity, the contact surface should be bright and free from dirt, oil, grease, scale, corrosion, paint etc.

TBP
Non-marring grab

Capacity 500 - 1500 kg

The TBP non-marring grab is suitable for lifting, turning and transporting of plates with a sensitive surface without leaving behind indentations.

It can be used for aluminium and stainless steel plate or those with an extremely hard surface.

INFO

The surface of the plate must be free of oil, grease or any other liquid to ensure safe transport.

The min. load is 10 % of the nominal WLL!

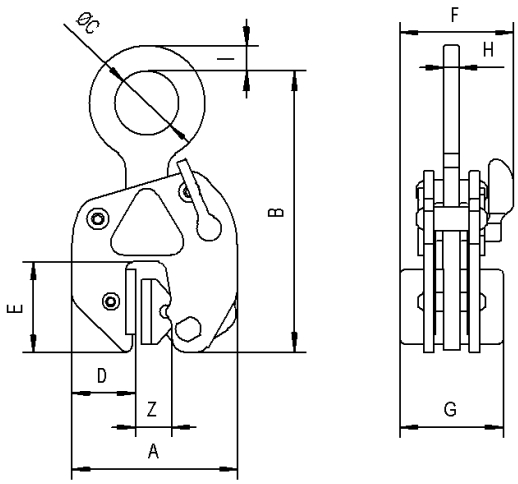

Temperature range from -20 °C up to +60 °C

TSB
Non-marring grab with chain

Capacity 750 - 1250 kg

The TSB grab has parallel-facing jaws that equally distribute the clamping pressure over a relatively large surface area. This makes the grab attractive for plate material with sensitive surfaces. The protective lining “Bremsit” offers an outstanding friction coefficient, thereby enhancing the grip of the jaws. This lining can be easily replaced when worn.

Similar to the universal grab, this grab has a large jaw capacity and the security of a safety lock device with a hold-open/hold-closed feature.

INFO

The surface of the plate must be free of oil, grease or any other liquid to ensure safe transport.

The min. load is 10 % of the nominal WLL!

Temperature range from -20 °C up to +60 °C

TTG
Girder grab for horizontal transport

Capacity 500 - 7500 kg

The girder grab TTG is designed for the horizontal transport of girders, metal plates, profiles etc. The offset suspension lug ensures that the flange of the girder will be kept practically horizontal during transport.

The positive safety lock keeps the clamp safely locked, even before the lift begins. This allows the operator to place the clamp, lock it closed and move away from the load. The lever ensures easy opening and closing of the clamping jaw and has a “lock open” feature.

INFO

When transporting long girders, it is recommended to use a pair of clamps in conjunction with a spreader beam.

TTR
Girder grab for vertical transport

Capacity 750 - 3000 kg

The girder grab TTR is designed for vertical transport, especially for lifting and stacking of girders. The unique position of the offset suspension lug keeps the girder virtually in a vertical position during transport.

The positive safety lock keeps the clamp safely locked, even before the lift begins. This allows the operator to place the clamp, lock it closed and move away from the load. The lever ensures easy opening and closing of the clamping jaw and has a “lock open” feature.

INFO

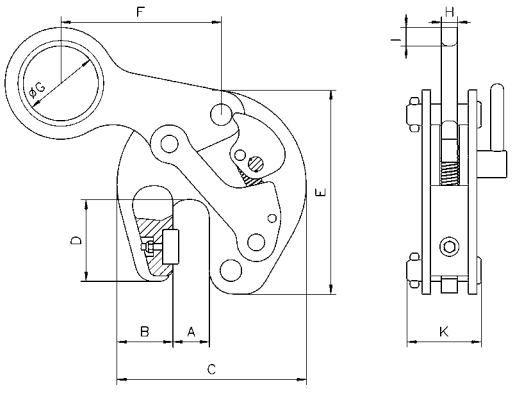

When transporting long girders, it is recommended to use a pair of clamps in conjunction with a spreader beam.

TTT
Girder grab for horizontal transport

Capacity 750 - 4500 kg

The girder grab TTT is used for the horizontal transport of steel girders. Due to the split fixed jaw, it can be positioned centrally on the end of the beam. The grab should only be used in pairs.

The safety lock with positive spring tension holds the grab in position on the end of the girder even without load tension.

The lever is used to engage and disengage the jaw and to keep it open.

INFO

The angle from the vertical must not exceed 30°!

TCG
Girder grab for transportation and turning of steel girders

Capacity 100 - 2000 kg

The main purpose of the CG girder turning clamps are for the transportation and turning of steel girders through 90°. They can be used individually or for longer beams used in in pairs in conjunction with a spreader beam. The clamps are attached to the horizontal flange of the girder and locked in place by the jaw locking lever. Once lifted the girder will turn through 90°.
These plate clamps are service-friendly, making it easy to exchange parts, which are readily available. Clamp repairs must be done by a trained person.

INFO

For longer girders use two clamps and a lifting beam!

TCH
Horizontal lifting gear

Capacity 1000 - 20000 kg

The TCH lifting clamp is designed to be used as a pair with a two-legged chain sling.
It is especially suited for the transport of single plates with a minimum thickness of approx. 5 mm as well as for plate bundles. The two-legged version is appropriate for normal sized plates.

For extra large or long plates, it is recommended to use two sets of the two-legged lifting gears in conjunction with a spreader beam. In the standard version, the lifting clamp is suitable for plates up to 1500 mm width. Lifting gears with longer chains for larger plate widths are available on request.

INFO

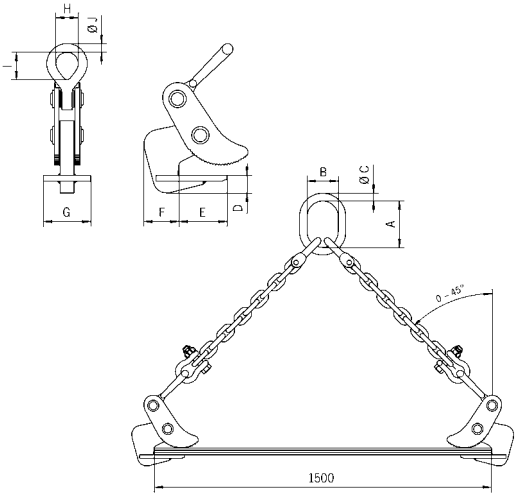

The angle from the vertical must not exceed 45°!

The capacity applies to a pair of lifting clamps.

TGF
Horizontal lifting gear

Capacity 1300 - 10000 kg

The TGF horizontal lifting gear consists of two clamps with a two-legged chain sling and is especially suited for the transport of plate bundles.

The clamps are easily adjusted to the height of the plate by a special ratcheting lever.

The lifting clamps are available in special versions for bundle thicknesses up to 400 mm. The lifting gear is made according to your requirements.

INFO

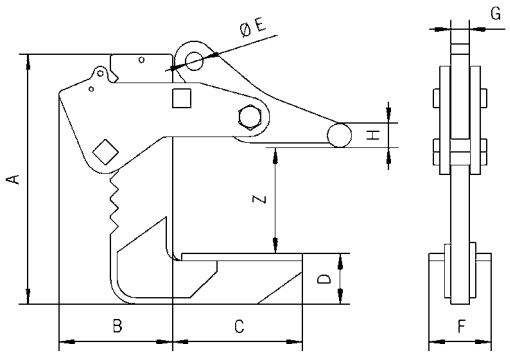

The angle from the vertical must not exceed 45°!

The capacity applies to a pair of lifting clamps.

BVH
Horizontal lifting hook

Capacity 500 - 7500 kg

The BVH horizontal lifting hooks are used in pairs with chain or wire rope slings to lift plate bundles that are relatively close to the ground.

The high tensile hooks have a serrated lifting surface.

INFO

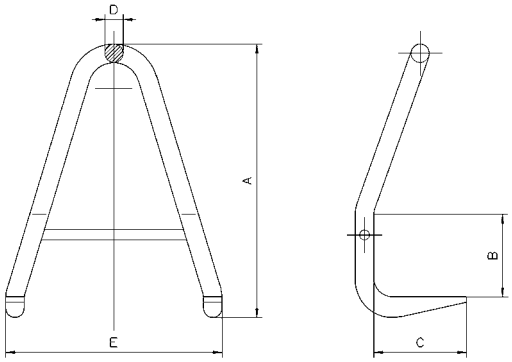

The angle from the vertical must be 30 - 45°!

The chain has to be in line with the crank of the lifting hooks.

THS
Lifting clamp with safety lock

Capacity 750 - 4500 kg

The THS lifting clamp is normally used in pairs especially for the horizontal transport of plates. The transport of slightly sagging plates is also possible. Individually, it can be used to load presses shears, and other machines. The safety lock is preventing the clamp from opening, even when there is no load. The jaws can be opened and closed with the safety lock lever. This clamp has a lock-open feature.

Optional

- THS 1,5 and THS 3,0 are available with a hinged hook ring on request

INFO

When used in pairs the angle from the vertical must not exceed 30°.

TWH
Lifting clamp

Capacity 1500 - 5000 kg

The TWH lifting clamp, when used in pairs, is well-suited for horizontal transport of individual and bundled plates. The clamp is not suited for thin plates that have a tendency to sag during transport.

It is normally used in combination with a two-legged chain sling.

The capacity (WLL) applies to a pair of lifting clamps.

Optional

- Protective lining

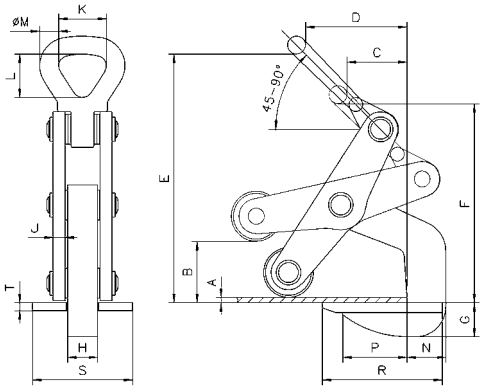

INFO

The angle from the vertical must not exceed 45°.

TPZ
Board clamp

Capacity 400 - 750 kg

The TPZ clamp is made for lifting and vertically transporting wood, particle board and plastic sheets.

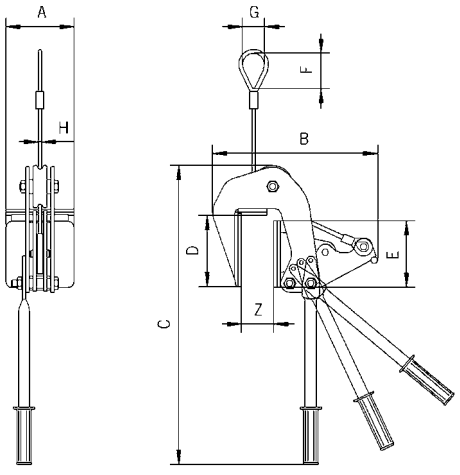

The pliers are fastened to the plate with the aid of a handheld lever. The jaw, which has a protective lining, grabs once lifting begins and holds the board securely.

Technical data TPZ

THM
Manual claw, magnetic

Capacity 120 - 170 kg

The THM manual magnetic claw is used for transporting steel sheets horizontally and vertically, lifting plates from racks, pulling steel sheets out of shelving, as well as transporting flat pieces of magnetizable steel.
The clamp, depending on the type, can be used for plate thicknesses from 1 to 5 mm.

Pressing down on the handle activates a cam which releases the magnetic claw from the workpiece.

This manual claw is maintenance-free and keeps the magnetic force for an unlimited period of time.

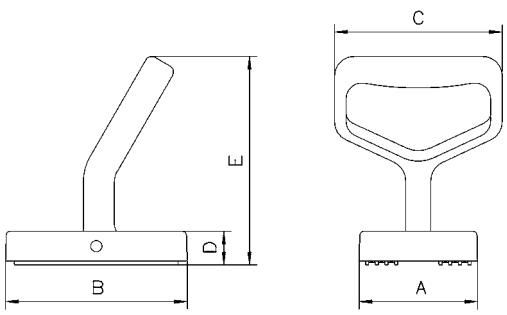

Technical data THM

Model	Art.-No.	Capacity[1] kg	Pulling capacity[1] kg	Weight kg
THM 120	N51602501	120	70	2
THM 170	N51602502	170	100	2

B, mm	140	140
C, mm	130	130
D, mm	25	25
E, mm	172	172

INFO

In order to achieve a maximum capacity, the contact surface should be bright and free from dirt, oil, grease, scale, corrosion, paint etc.

THG
Hand clamp

Capacity 250 kg

The THG hand clamp is suited for the individual transport of light and thin plates. Pressing down on the hand grip releases the tension spring, allowing the clamp to open and slide onto the plate.

The plate can be transported by holding onto the ergonomically designed hand grip.

The positive spring pressure prevents the plate from accidental slipping out of the clamp.

INFO

The plate surface of the material must not exceed a hardness of HRC 30.

TSH
Screw clamp for vertical and horizontal pulling

Capacity 750 - 5000 kg

The screw clamp offers many possible applications. It is particularly useful for lifting, turning and pulling steel plates, girders and steel constructions.

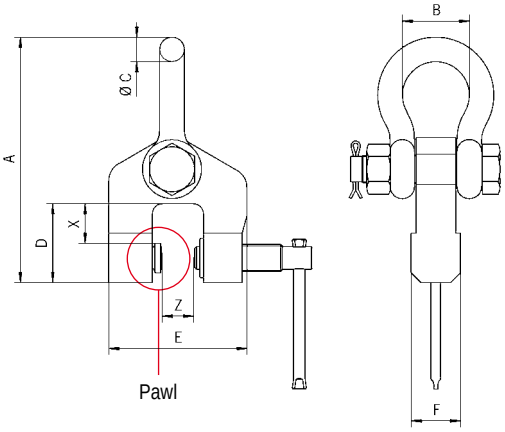

The spindle is closed only finger tight.

Once the screw clamp is tightened and lifting begins, the pivoting pad clamping system produces a wedging action against the material, holding it securely (see below functional drawing).

TBA
Bale grab

Capacity 200 - 1000 kg

The TBA bale grab transports bales of fiber, wool, fabric, paper, pressed straw and various types of shavings up to a width of 1.3 m. Bales are gripped safely yet gently, and where applicable, the clamps are lined with a soft and pliable material.

The locking pawl only engages if the grab is opened without manual intervention.

INFO

The standard grab is equipped with protective linings.

Serrated jaws available on request.

TCU

TCO

Container lifting lug TCO

TCU and TCO Container lifting lugs

Capacity 32000 - 56000 kg

The lugs serve as flexible attachment points for the transport of containers. Two types are available which can be fastened to either the “top” or to the “bottom” of the container.
These container lifting lugs are offered in a set of 4 pieces.

TCO

TCO is vertically mounted in the hole at the top of the container. Turning the TCO 90°, locks it securely in place.

Transport is done with the use of a spreader beam in conjunction with wire rope, chain or textile slings making sure the load is suspended vertically.

TCU

TCU is laterlay mounted at the bottom fixing hole on the container and has a spring-loaded bolt to prevent an accidental release.

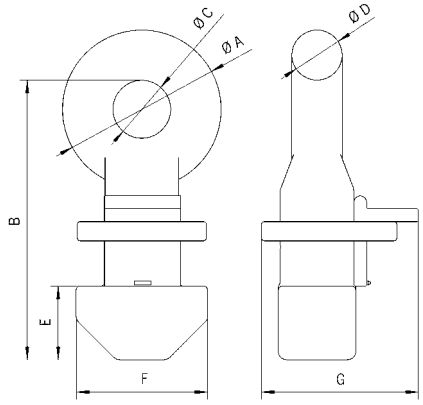

Technical data TCO and TCU

TCR
Rail grab with safety lock

Capacity 1000 - 2000 kg

The TCR rail grab transports rails, as used by railways, easily and safely. A safe grip is ensured by the lever operated safety lock. For long rails, two grabs must be attached to a spreader beam to avoid sagging.

Since the rails are primarily grabbed with positive fit, it is important that the clamp stays in a vertical position during initial lift.

INFO

For special sizes please advise rail type and profile!

A TCR multiple rail system is also available for the simultaneous transport of up to 12 rails.

For rail jacks please see page 138.

MR
Multi-rail grab

Capacity 5000 - 12000 kg

The multiple rail grab with fixed adapter for one rail type is used wherever rails are loaded using a crane and lifting gear, e.g. in ports, steelworks, on the road and in storage yards.
They are used in pairs.

TCS
Coil hook

Capacity 500 - 3000 kg

The TCS coil hook is an universal C-Hook. Due to its tipping feature, it can lift or lower the coil, whether the coil is lying flat or is in an upright position. With this tipping device, the coil is tipped safely through 90°.

The slow and safe movement of the tipping device ensures a continuous flowing movement when lifting or lowering the coil. At the same time, the tipping device serves the purpose of preventing accidental slipping of the load during transport.

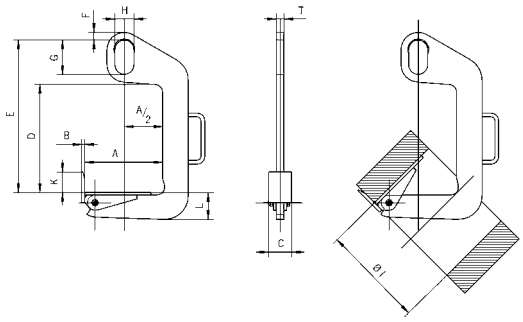

INFO

Other sizes and models available on request.

TKA/d
Crate grab with tipping device

Capacity 150 kg

The crate grab with tipping device is an absolutely safe unit, which not only securely transports stacking boxes, but can empty them in mid-air as well.

The crate grab is very robust but still very easy to operate and complies with the relevant standards and EC directives.

A safety lever system prevents the accidental opening of the grab.

The clamping jaws tightly grab under the rim of the crate without damaging the crate. To engage the tipping motion in order to empty the crate, the safety lock must be manually unlocked. The tipping motion is limited to 120°. This prevents the crate from flipping completely over while emptying, thereby reducing the risk of injury.

Optional

- Grabs for other sizes of crates.

INFO

Please provide the crate dimensions or a sample crate when ordering.

TKA a/i
Crate grab

Capacity 250 kg

The easy-handling crate grab, which grabs on the side plates or the front sides of the crate, transports crates safely and without damaging them.

The moveable jaws press the edge of the crate gently against the outside grab support rails. Stacking boxes made of steel or plastic will not get deformed. After the box has been set down, the safety device holds the grab open.

When lifting the crate and grabbing the support rails, the safety device must be manually pulled back until it lies over the safety bolt. With further lifting, the jaws grab under the outer top edge of the crate and lift it up safely.

The crate grab is available as an external or internal operating grab.

BTG
Concrete pipe lifting gear

Capacity 1500 - 3000 kg

Lifting gear for the vertical transport of concrete pipe and culverts must be very versatile. Most important, it must be absolutely safe and easy to handle under even the harshest conditions.

The Tigrip concrete pipe lifting gear meets all these requirements. It is a three legged lifting system for the safe and non-marring transport of concrete pipes up to a diameter of Ø 2000 mm and a load of up to 3 t.

The jaw capacity is designed for concrete pipe thicknesses from 40 - 220 mm.

Attachment and removal of the clamps can be done easily due to the handles that have been incorporated into each clamp.

Features

- Solid design
- Safety factor 4:1
- Simple and safe handling
- Large jaw capacity
- For the toughest operating conditions
- Lightweight design
- Service-friendly

INFO

For concrete pipes according to DIN 4034.

Lifting gear for concrete pipe up to a diameter of Ø 3000 mm available on request!

Spreader beam range

Bulkier or heavier loads must be carried on multiple points to ensure safe weight distribution and less sagging. The extensive TIGRIP® range provides a vast choice of load capacities, working widths, adjustment ranges and hook types to cater for the great majority of applications. In addition to our quality-engineered, robust and cost-effective standard range, we can also provide special designs to meet individual, bespoke customer requirements.

Options include side welding hooks (so-called cow horns), that take rope loops or lifting bands' crane eye for carrying pipes. Rolls or rollers on two or more points; star crossbars for carrying cylindrical items, or transverse crossbars for four point suspension, a further version of the reliable, easy to use and safe TIGRIP® crane hook spreader beams.

Spreader beams can be used for a diverse range of shapes and designs, and can be individually designed to meet specific applications. The following illustrations provide a short overview of the many designs available. Suspension and load carrying variants can be easily combined with most designs.

Suspension variants

Eyelet suspension

Standard suspension for use with single hooks according to DIN 15401

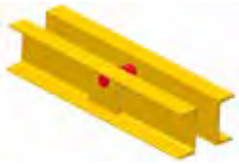

Possible for defined load centre of gravity for symmetrical but also asymmetrical loads.

Chain suspension

To stabilise swinging movements

Multitude of options in combination with our chain programme. Lifting ring for single hooks but also double hooks Shortening hooks allow the centre of gravity to be adjusted for asymmetrical loads.

Internal bolt suspension

To reduce the build height

Fixed welded-on but also plug-in variants possible.

Double eyelet suspension for two crane operation

Allows the spreader beam to be used on two cranes at the same time.

Each suspension variant can be operated as a double suspension.

Bracket suspension

For use with double hooks according to DIN 15402

Load carrying variants

Eyehooks

with forged safety latch

For use with any sling or sling points.

Swivel hooks

Allows alignment of the hook to the sling point.

Variants possible with plain-bearing mounted swivel (cannot be rotated under load) and also ball-bearing mounted swivel (can be rotated under load)

Front welded-on hook (cow horn with safety latch)

To reduce the height on single spreader beam

Welded-on hooks (cow horns with safety latch)

For use with two single-stranded or singly wrapped sling
Also possible with adjusting bracket.

Mounting eyelets

for fixed slings

With the mounting eyelets, the spreader beam can be combined with any slings from our programme.

Centre hooks

For crane use if the crossbar is not required.

With the centre hook there is no need to place and remove the spreader beam.
Variants possible as eyehooks or swivel hooks.

TTS-E
Spreader beam, non-adjustable

Capacity 1000 - 10000 kg

For the transport of symmetrical loads

Features

- Lifting brackets for single hook according to DIN 15401
- Eyehooks with forged safety latch

Optional

- Other capacities
- Working widths according customer requirements
- Accentrical suspension for asymmetrical loads

INFO

The spreader beams can be combined with the different suspension types, see pages 216 - 217.

TTS
Spreader beam, adjustable

Capacity 1000 - 25000 kg

For the transport of symmetrical and asymmetrical loads.

Features

- Lifting brackets for single hook according to DIN 15401
- Adjustment with grids
- Adjustable bracket with handle and swivel hook (cannot be rotated under load).

INFO

The spreader beams can be combined with the different suspension types, see pages 216 - 217.

TTS-HE
H-frame spreader beam

Capacity up to 10000 kg

For the transport of symmetrical loads.

Features

- Lifting brackets for single hook according to DIN 15401
- Eyehooks with forged safety latch

Optional

- Accentrical suspension for asymmetrical loads

INFO

Capacity, working length and width designed on individual customer requirements.

The spreader beams can be combined with the different suspension types, see pages 216 - 217.

TTS
Spreader beam for box pallets

Capacity 1000 - 3000 kg

Box pallets with DIN 15155 specifications, are usually moved around with a forklift, but are so sturdy that they can be picked up and transported with a spreader beam grab and an overhead crane hooked up to the top of the box pallet's frame.

Thanks to these spreader beams, the shipping and receiving area is no longer entirely dependent on floor-level material handling equipment such as forklifts.

The version designed for the individual transport of box pallets is equipped with two fixed yokes and two pivoted ones, interconnected with a control bar. The load tackling gear is fixed and unfixed by only one person.

TTS-Z
Fork lift cross beam

Capacity 2000 - 3150 kg

The model TTS-Z with two bags is used for forklift tines and has one centered, pivoting eye hook (do not pivot under load). The fork lift cross beam is fastened with two spindles and ensures safety while lifting.

Technical data TTS-Z

Model	Art.-No.	Capacity kg	Overall height B mm	Dim C mm	Dim D mm	Dim E mm	Weight kg

G, mm	25	28	34

INFO

Attention must be paid to the working load limit of the single forklift tines.

TZH, swivel hooks, pivoting and swivelling

INFO

For the transport of loads above persons (e.g. on construction sites) appropriate security measures against falling loads or parts must be taken.

The load must not exceed the fork length.

TKG vhs Crane forks

Capacity 200 - 5000 kg

These crane forks are equipped with adjustable tines, height adjustability and an automatic balancing system. Crane forks with automatic balancing* tend to point their tines upward when being transported. This prevents the load from unintentionally slipping off the tines.

The shackle is movable and runs on a track depending on the load. The automatic balancing engages by a pressurized gas spring once the forks are loaded. The load will always be in the center of gravity of the forks, ensuring a safe transport.

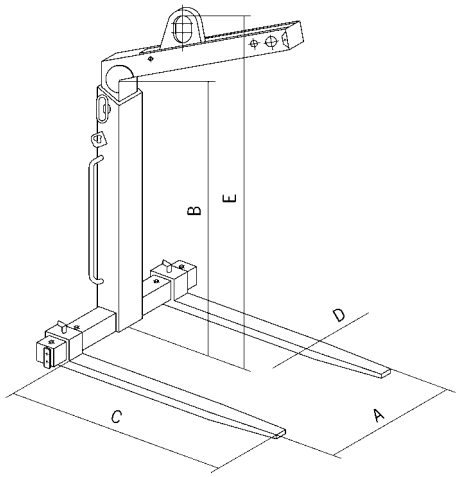

*The automatic balancing system requires a minimum load of 20 % of the crane forks‘ working load limit!

Features

- All crane forks comply with the latest standards and CE-directives.
- Safety factor 4:1
- Maintenance-free
- Highly visible safety colour
- For the transport of rings or coils, the fork tines are simply pushed together.
- Easily adjustable tines for all pallet sizes.

Scope of delivery

Chain for load securing

TKG vh
Crane forks

Capacity 1000 - 5000 kg

These crane forks are equipped with adjustable tines and height adjustability. The balancing system engages when the shackle is manually hooked into the appropriate notch.

Features

- All crane forks comply with the latest standards and CE-directives.
- Safety factor 4:1
- Maintenance-free
- Highly visible safety colour
- For the transport of rings or coils, the fork tines are simply pushed together.
- Easily adjustable tines for all pallet sizes.

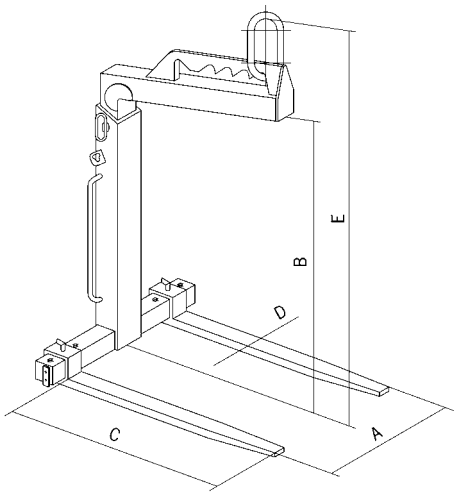

Scope of delivery

Chain for load securing

INFO

The load must not exceed the fork length.

- TKI with digital display and radio control

The crane weigher can be operated by radio control. The displayed values can be taken off the remote control device and can be transferred to a PC. Several measured values can be totalled and saved. Various functions like piece counting, maximum weight (gross/net) can be realized.

Features

- TKI crane weigher has the same features like the model TKE.
- Remote control and data exchange via radio transmission.
- USB interface
- Accumulation memory

Optional

- User software for data processing
- PC cable
- Lower hook

Scope of delivery

- Crane weigher with infrared remote control
- Remote control and data exchange via radio transmission.
- 8 x 1.5 V AA batteries
- Carrying case
- Test certificate
- Upper and lower shackle

Crane weighers

Measuring range 0 - 9.5 t

The crane weighers TKE and TKI are compact measuring devices for the weighing of loads.
Due to the compact design and robust steel housing the crane weighers are suitable for a wide range of applications. The crane weighers have a liquid crystal display (LCD), which can tare as well as show either the gross or the net load.
Both models TKE and TKI are fitted with an infrared remote control with a range of 8 m.

- TKE with digital display

Features

- High accuracy: ± 0,03 % of the weighing range
- Lightweight design
- Easy-to-read display
- Easy to use
- Robust design
- Retains the peak value to memory.
- Operating time of about 40 hours (without radio frequency communication)
- Automatic setting to zero when load indicator is switched on.
- Display of maximum weight (gross/net).
- Display of measuring units on the load indicator.
- Measuring units g, kg, t and lbs.
- Automatic stand-by for a prolonged battery lifetime.

Optional

- Lower hook

Scope of delivery

- Crane weigher with with infrared remote control
- 4 x 1.5 V AA batteries
- Carrying case
- Test certificate
- Upper and lower shackle

- TKR with digital display and radio control

The crane weigher can be operated by radio control. The displayed values can be taken off the remote control device and can be transferred to a PC. The system can be combined with an easy-to-read display. Several measured values can be totalled and saved.

Features

- TKR crane weigher has the same features like the model TKL plus.
- Remote control and data exchange via radio transmission.
- USB interface
- Accumulation memory

Optional

- External easy-to-read display.

Scope of delivery

- Crane weigher
- Remote control with display
- 7 x 1.5 V AA batteries
- Carrying case
- Test certificate
- PC cable
- User software

Crane weighers

Measuring range 0 - 12 t

The crane weighers TKL and TKR are compact measuring devices for the weighing of loads. Use appropriate attachments like grade 8 forgings between the hook of the hoist or crane, the crane weigher and the load.

The crane weighers have a liquid crystal display (LCD), which can tare as well as show either the gross or the net load. It also indicates overload at 110 % of the rated capacity and the status of the battery.

- TKL with digital display

Features

- High accuracy
- Lightweight design
- Easy-to-read display
- Easy to use
- Robust design
- Housing can be rotated 180°
- Retains the peak value to memory.
- The battery capacity provides for around 200 operating hours.
- Automatic setting to zero when load indicator is switched on.
- Use of rechargeable batteries possible (external battery charger*).
- Display of maximum weight (gross/net).
- Display of measuring units on the load indicator.
- Measuring units kg, t, lbs, to, kN.
- Automatic stand-by for a prolonged battery lifetime.
- Simple change of batteries
- Warning if batteries are low.
- Overload warning

Scope of delivery

- Crane weigher
- 4 x 1.5 V AA batteries
- Carrying case
- Test certificate

* not part of the delivery package.

- TZR with digital display and radio control

The load indicator can be operated via radio control. The displayed values can be taken off the remote control device and can be transmitted to a PC. The system can be combined with an easy-to-read display.
Several measured values can be totalled and saved.

Features

- TZR load indicator has the same features like the model TZL plus.
- Remote control and data exchange via radio transmission.
- USB interface
- Accumulation memory

Optional

- External easy-to-read display.

Scope of delivery

- Load indicator
- Remote control with display
- 7 x 1.5 V AA batteries
- Carrying case
- Test certificate
- Without shackles and hooks
- PC cable
- User software

Load indicator

Measuring range 0 - 100 t

The Tigrip® load indicator is a mechanical measuring instrument with electronic display. On account of its flexibility the Tigrip® load indicator has universal applications. Whether used as a conventional crane weigher or to measure forces, it is the economical choice for various applications. It can be used in conjunction with shackles and hooks.
The load indicator is provided with liquid crystal display (LCD), which can tare as well as show either the gross or the net load. It also indicates overload at 110 % of the rated capacity and the status of the battery).

- TZL with digital display

Features

- High accuracy

YFS
Spring tensioners

Capacity 0.5 - 10.0 kg

YFS-A
Spring tensioners with ratchet locking device

Capacity 2 - 10.0 kg

Spring tensioners are designed to retract the cable when no force is applied. An amount of downward force must be continually applied to keep the suspended object at its extended position.
The torque output of the rewind spring increases as the cable is extended, retracting the suspended object to the uppermost adjusted position when released.

Features

- Stamped steel construction, powder-coated housing
- Automatic drumlock according to DIN 15112
- Additional hanger for the attachment of secondary safety chains according to DIN 15112
- Rope guide made of wear-resistant nylon for reduced wear of rope and body
- Declaration of EC-conformity
- Adjustable cable stop to fix the spring tensioner in the desired position
- Series YFS-A with ratchet-locking device. Locks the out-retracting rope for unrestricted tool movement. This device can be switched ON/OFF, so the spring tensioner can be used with or without the ratchet-locking device.

Applications

Pneumatic power-tools, assembly tools, paint spraying guns, riveting machines, nut runners, grinding and polishing machines.

Adjustment of spring tension YFS-01/02
with central turning wheel and spring lever

Adjustment of spring tension YFS-03/04/05
with central shaft and spring lever

YBF
Spring balancers

Capacity 0.5 - 200 kg

YBF-L
Spring balancers with extended rope length

Capacity 1.5 - 130 kg

Spring balancers are used to relieve the operator from the weight of hand-tools. By using a tapered rope drum the weight of the attached load is compensated, loads up to 200 kg can be moved effortlessly in vertical axis.

Features

- Spring balancers model YBF are designed in accordance with DIN 15112.
- The housing is manufactured from high-tensile aluminium pressure die casting for maximum resistance to impact.
- Manual drum lock for an easy exchange of rope or for changing the attached load.
- The special spring-assembly inside the balancer guarantees a consistent counterbalance throughout the complete working range.
- Easy exchange of wire rope. A small slot in the body facilitates the removal and re-installation of the rope without any need to disassemble the unit.
- Spring assemblies as separate units in a closed steel housing for improved handling during assembly and disassembly. Reduced risk of injuries.
- Rope guide made of wear-resistant nylon for reduced wear of rope and body. Lifetime of the spring balancer is increased. The rope guide can be removed and installed on site without disassembling the rope.
- Load indicator allows easy reading of the capacity set.
- Upper and lower suspension eyes are provided for the attachment of secondary safety chains. Providing additional safety and preventing the spring balancer and load from falling accidentally.

Applications

Spot-welding guns, riveting-machines, slaughterhouse equipment, multiple nut-runners etc.

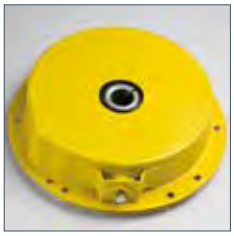

Load indicator

for:
YBF-09 - YBF-70
YBF-22L - YBF-70L
YBA-15 - YBA-70
YBA-22L - YBA-70L

Rope guide

for:
YBF-09 - YBF-200
YBF-09L - YBF-130L
YBA-15 - YBA-70

Spring assembly

as separate unit in a closed steel housing.
All models with capacities more than 5 kg.

YBA
Spring balancers with safety feature in case of rope breakage

Capacity 9 - 70 kg

YBA-L
Spring balancers with safety feature in case of rope breakage and with extended rope length

Capacity 9 - 70 kg

YBA series spring balancers have the same technical features as the YBF series, but are equipped with an additional safety feature in case of rope breakage.
This mechanism automatically locks the rope in case of accidental dislodging of the suspended weight, breakage of the bottom hook or the rope.
Whipping of the rope and potential injuries to the operator or other personnel in the area is avoided.

This series is used primarily in areas in which higher safety standards are applied or adverse conditions are common (flying sparks etc.) which might cause damages to the rope.

This series is available with standard and extended rope length.

Suspension eye

According DIN 15112 spring balancers must be equipped with additional suspension eyes for the attachment of secondary safety chains.

Easy exchange of wire rope

Without any need to disassemble the unit.
YBF-09 - YBF-100
YBA-15 - YBA-70

Manual drum-lock

For an easy exchange of the rope.
All models with capacity more than 5 kg.

INFO

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

Textile Lifting Slings

Yale webbing slings and round slings are produced from high-tensile quality polyester (PES) in accordance with EN 1492, parts 1 and 2. The highly flexible and versatile material exerts evenly distributed pressure on pressure-sensitive and tension-sensitive loads; it is not subject to material ageing or brittleness and is heat-resistant up to +100°C.

Lashing Systems

Yale lashing belts are produced from polyester (PES) according to EN 12195-2. The extremely resilient belt material is resistant to stretching and abrasion; it guarantees a high load bearing capacity and a long service life. All Yale lashing belts are stretched belts, thermally fixed and protected against abrasion.

Entertainment

Yale Entertainment accessories are specially manufactured to meet the high demands of this segment.
The highly flexible and adaptable material exerts an even pressure distribution on pressure- and tension-sensitive loads, shows no material ageing or embrittlement and is heat-resistant up to +100 °C.

Yale

TEXTILE LIFTING SLINGS

INFO

This user information presents a general overview regarding the application of textile lifting slings and does not substitute the existing operating instructions for specific products!

Lifting operations with textile slings may be carried out by competent users (trained in theory and practice) only.

When operated correctly, our textile slings offer the highest degree of safety in line with long life expectancy and avoid damage to products and people.

Limitations of use

Loading

Textile lifting slings must not be overloaded. The capacities for the most important lifting/slinging methods are indicated on the identity label. Always observe the maximum angle from the vertical (angle β)!

Temperature

Textile lifting slings made from polyester are admitted for applications at temperatures between -40°C and +100°C. This temperature area may change in chemical environments. The woven structure of the drenched textiles at temperatures below 0°C are susceptible to damage due to the formation of ice.

Ice will reduce the flexibility of the lifting sling! At temperatures below 0°C, dry lifting equipment should be used only! In dry condition, polyester features a high electrical resistance and provides an insulating effect between load and crane hook (e.g. during welding jobs – observe temperatures!).

Shock loading

Textile lifting and lashing equipment should not be subjected to sharp jerks and jolts in order to avoid heavy forces which may be considerably higher than the actual load weight!

Chemicals

Particular caution is required when using textile lifting equipment in areas where chemicals are present.

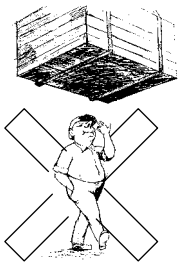

Polyester has good resistance against mineral acids but will be destroyed by alkaline – consult our experts for advice in your specific application!

Acid may cause material brittleness to steel fittings of textile lifting slings! Harmless acid solutions may concentrate by evaporation to an extent that they provoke damages. Affected textile lifting equipment must be thoroughly rinsed in cold water, dried in open air and inspected by a competent person.

Transport of people

Transport of people with textile lifting equipment is generally forbidden!

Operation in danger zones

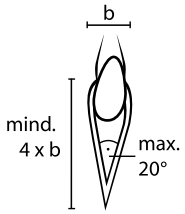

Lifting or transport of loads must be avoided while personnel are in the danger zone.

People are not allowed to pass over or under a suspended load!

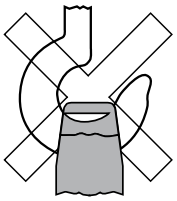

Application advices

- The operator may start moving the load only after it has been correctly attached and all personnel are clear of the danger zone.
- Loads must not be left unattended in raised or tensioned condition for a longer period of time.
- Flat webbing or round slings must not be used in knotted, tied or twisted condition and may only be used for the attachment of loads.
- Prior to every use, textile lifting and lashing equipment must be examined with regard to obvious defects. Ensure that their identity and dimensions are correct and that they are provided with a legible capacity label. Never use lifting equipment which is defective or not labelled!
- Damage of the capacity label can be avoided by keeping it away from the load, the hook or choke hitch operations!
- The angle of the eye must not exceed 20° in order to avoid inadmissible strain on the seams! This will be ensured when the eye length is approx. 4 times the width of the hook.

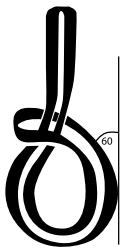

- Hooks or other lifting devices in loaded condition must not be attached in the area of sewn overlaps or at the seam of the round sling sleeve. Make sure that the seams are positioned in the straight part of the lifting device!

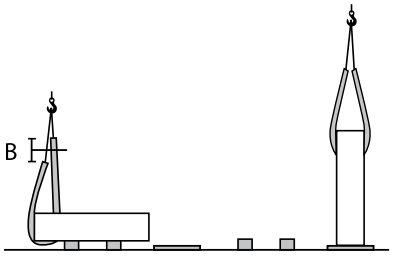

- Hooks should be provided with sufficient radius. The contact area of the web sling must be straight, so that the entire cross section of the sling is loaded equally. If the carrying width of flat webbing sling is below 75 mm, the radius curve of the lifting device must be at least ¾ of the width of the webbing sling.

- Take care that round slings do not overlap in the crane hook. They must have sufficient space in the hook mouth as well as at the load, so they can assume their natural, flattened profile and provide even loading over the full width of the round sling.
- Flat webbing slings should be applied in such a way that they can carry the load over the full sling width. Greater angles from the vertical will strain the edges of the slings and possibly lead to breakage!
- Textile lashing equipment must be protected against sharp edges, friction and abrasion at both load and lifting device. A radius edge is classed as sharp, if it is less than the thickness of the flat webbing or round sling (in flat, loaded condition).
- Never push or place the load onto the lifting device! Never pull the load over rough surfaces or edges and do not drag from underneath a load!
- In “choke hitch” the textile sling should be positioned so that it can form a natural angle of 60° and that heat due to friction is avoided. Never re-adjust the choke hitch and prevent heat development by friction (slipping of load). In order to lift loads with plain or slippery surface we recommend double choke hitch.

- Round slings and flat webbing slings will stretch under load by approx. 3 - 5 %. This has to be strictly considered as it may cause abrasion resp. damages at sensible surfaces. As prevention we recommend the use of protective sleeves and edge protectors. In case of (intended) load movements during lifting operations and resulting friction, e.g. during assembling or turning of goods, the surface or edges of the load must be secured by protective sleeves or corner protectors, which will safeguard the lashing device and leave sufficient space for movement and alignment without greater friction (see dim. B in the following drawing)

- If more than one sling is used to lift a load, these should be of same type with preferably same length in order to avoid different elongation behaviour and allow carrying ability over the full width (employ smallest angle from the vertical or use spreader beam instead).
- Textile lifting equipment must be stored in a clean, dry and well ventilated area. Avoid exposure to direct sunlight and other sources of UV. Keep them away from other heat sources, chemicals, fumes and corroded surfaces as they will have a negative effect on the life expectancy of the sling. Slings should not be dried near open fires or other hot places.
- Textile slings with obvious damages, overloading or other detrimental influences must be taken out of use and may be returned to service after inspection and possible repair only.

INFO

INFO

You will find the General Terms and Conditions at the end of the catalogue.

Please note the information on our training courses on page 4.

INFO

Maintenance and repair

Inspections and tests must be performed by competent persons or specialist workshops only.

Inspections

Depending on application, textile lifting equipment must be subjected to regular inspections by competent persons, at least once per year. The inspection must be visual and extended to the following deficiencies:

- Complete and legible identity label
- Damages by chemical influence, e.g. local soaking, chipping of yarns or heat (hardening)
- Steel links must not show deformations, grooves or reduction to the cross section of more than 10%. Check for cracks; possible welding points must be visible and not covered by the webbing
- Inspections have to be recorded
- Defective slings have to be taken out of service immediately and must be stored separately!

Criteria for disposal

Textile slings must not be used any longer if e.g. :

- The marking (identity label) is missing or illegible.
- Detrimental impacts have occurred, e.g. overloading, shock loading, chemical influence or heat.

Flat webbing slings:

- Damages of selvage, defects of the woven structure by abrasion, cuts or yarn breakages have occured. If 10% or more of the webbing sling cross section is damaged the sling must be discarded.
- Heavy deformation or melting of yarns due to heat (shiny surface and/or hardened webbing) can be recognized.
- Load bearing seams are defective.

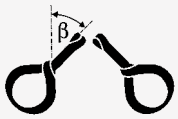

Round slings:

- The outside (sleeve) is damaged by cuts or abrasion.
- The inside (polyester yarns) of the sling is visible.
- The seams of the sleeve are damaged.

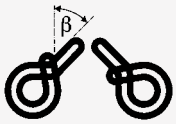

INFO

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

RSD
Round sling with duplex sleeve

Made from polyester (PES), EN 1492-2 with double stitch-less protection sleeve, with capacity label.

Features

- With double protection sleeve, PU-starched, thermally fixed.
- Colour coding of the protective sleeve.
- Printed-on capacities.
- Woven tonnage stripes, per ton capacity 1 stripe.
- Low weight allows easy handling.
- Protection against hand injuries.
- Protection against cargo surface damage.
- Highly flexible and adaptable to given shapes.
- UV-resistant, eliminating material ageing or embrittlement.
- Heat resistant up to +100°C.
- Moisture-resistant fabric, thus preventing frost damage (up to approx. -40°C).

RSX
Round sling with extra thick single sleeve

Made from polyester (PES), EN 1492-2 with extra strong stitchless protection sleeve, with capacity label.

Features

- Optimized woven structure, PU-starched, thermally fixed.
- Easy identification of the annually required UVV tests through an additional label showing a check list.
- Colour coding of the protective sleeve.
- Printed-on capacities.
- Woven tonnage stripes, per ton capacity 1 stripe.
- Low weight allows easy handling.
- Protection against hand injuries.
- Protection against cargo surface damage.
- Highly flexible and adaptable to given shapes.
- UV-resistant, eliminating material ageing or embrittlement.
- Heat resistant up to +100°C.
- Moisture-resistant fabric, thus preventing frost damage (up to approx. -40°C).

INFO

Special lengths available on request.

RSE
Round sling with single sleeve

Made from polyester (PES), EN 1492-2 with single stitch-less protection sleeve, with capacity label.

Features

- With single sleeve, PU-starched, thermally fixed.
- Colour coding of the protective sleeve.
- Printed-on capacities.
- Woven tonnage stripes, per ton capacity 1 stripe (applies only to round slings up to 10 t).
- Low weight allows easy handling.
- Protection against hand injuries.
- Protection against cargo surface damage.
- Highly flexible and adaptable to given shapes.
- UV-resistant, eliminating material ageing or embrittlement.
- Heat resistant up to +100 °C.
- Moisture-resistant fabric, thus preventing frost damage (up to approx. -40 °C).

HSE
Endless flat webbing sling, single ply

Made from polyester (PES), EN 1492-1 form A2, with capacity label.

Features

- Single ply, PU-starched, thermally fixed.
- Colour coded webbing.
- Woven tonnage stripes.
- Low weight allows easy handling.
- Protection against hand injuries.
- Protection against cargo surface damage.
- Consistent pressure distribution onto pressure- and pull sensitive loads.
- UV-resistant, eliminating material ageing or embrittlement.
- Heat resistant up to +100°C.
- Moisture-resistant fabric, thus preventing frost damage (up to approx. -40°C).
- Low elongation (<4%).

HBD-ED
Webbing sling, duplex construction, steel links on both ends

Made from polyester (PES), EN 1492-1 form Cr2, with capacity label.

Features

- Duplex construction, PU-starched, thermally fixed.
- With reevable steel links.
- Woven tonnage stripes.
- Protection against hand injuries.
- Protection against cargo surface damage.
- Consistent pressure distribution onto pressure- and pull sensitive loads.
- UV-resistant, eliminating material ageing or embrittlement.
- Heat resistant up to +100°C.
- Moisture-resistant fabric, thus preventing frost damage (up to approx. -40°C).
- Low elongation (< 4 %).

INFO

HBD-ED - links are reevable, webbing sling also applicable for use in choke hitch.

PU-SG
Round sleeve

With fabric insert and PU-coating

Economical solution to protect webbing slings and round slings against wear caused by abrasion.

INFO

Not suitable for protection against sharp edges.

Technical data PU-SG

Trucker Set

With each sport bag you receive:

2 x Ratchet lashing, LC 250 daN, 25 mm, one-part, L=4.0 m
2 x Ratchet lashing, LC 1000 daN, 35 mm, one-part, L=6.0 m
2 x Ratchet lashing, LC 250 daN, 25 mm, two-part, double J hook, L=4.0 m
2 x Ratchet lashing, LC 1000 daN, 35 mm, two-part, double J hook, L=6.0 m
4 x Ratchet lashing, LC 2000 daN, 50 mm, two-part, double J hook, L=8.0 m
4 x Edge protector, for 50 mm webbing width
4 x Slip restraining mats, 250 x 100 x 8 mm

Art.-No.: N35500002

Minimum purchase: 2 bags

Including sports bag

INFO

General information about load security

The varying forces, which can result in slipping, rolling, tilting or even lift-off of loads during transport, are regularly underestimated. Possible consequences are e.g. that the vehicle gets out of control, the driving cab is damaged, the vehicle even overturns and the falling load endangers others! The common assumption that very heavy loads do not require lashing security, is a fatal error. Lashing of loads may be performed by competent users (trained in theory and practice) only.

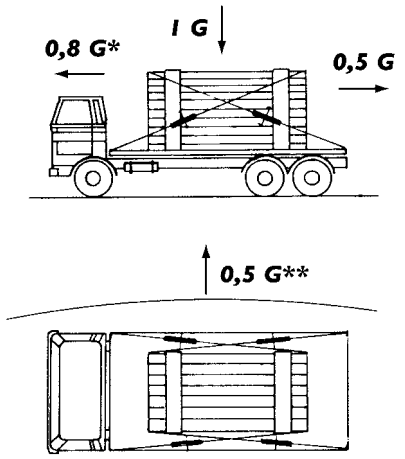

Some basic rules about load security with ratchet lashings

- Depending on the cargo, consideration shall be given to select an appropriate vehicle with adequate structures and lashing points.
- The load centre of gravity should be as low as possible and ideally positioned according to the load distribution plan of the vehicle.
- The permissible gross weight and loads per axle must not be exceeded.
- The load should be stored as close and low as possible and should not leave free space between load, front wall or side walls. Free spaces between the outer walls and the load should be stuffed where possible.
- Depending on the type of cargo, the driving speed should be conform to the road and traffic situation as well as to the driving quality of the vehicle.
- Adverse friction values between cargo and loading area (oily metals, wet areas etc.) will considerably increase the requirement for a correct security of the load. Slip restraining mats will contribute to achieve a more economic and efficient load lashing security.
- Unstable cargo is very susceptible to tilting and in most cases has to be lashed extensively (calculation against slipping and tilting).
- Positive load lashing (e.g. supporting the cargo at front and side walls or with wedges or scantlings fixed on the loading platform) will contribute substantially to the stabilisation of the cargo and to reduction of additional lashing requirement.

Forces on cargo loads (EN 12195)

Truck and trailer loading (road transport) – Acceleration coefficients

During road transport the heaviest stresses on the load security equipment will occur during braking, lift-off of the load by vibration and impact as well as centrifugal forces in narrow curves.

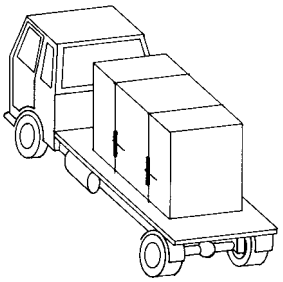

* The value for the longitudinal acceleration in combined traffic (lorry and/or trailer during rail transport) has to be calculated with 1G.

** 0.7 for tilting of instable cargo loads

Lashing methods

Over top lashing

Over top lashing consists of tensioning the lashings to the tension force so as to increase the friction force at the contact surface of the load to avoid any sliding of the load. Influence factors are the dimensions of the load, the acceleration values, the dynamic friction factors as well as the lashing angle. The calculation of lashing forces will give the required tension force of the lashing devices.

INFO

You will find the General Terms and Conditions at the end of the catalogue.

Please note the information on our training courses on page 4.

INFO

This user information presents a general overview regarding the application of web lashings and does not substitute the existing operating instructions for specific products!
Lashing operations with textile lashing equipment may be carried out by competent users (trained in theory and practice) only. When operated correctly, our textile lashings offer the highest degree of safety in line with long life expectancy and avoid damage to material and people.

Limitations of use

Temperature

Textile lashings in accordance with this part of the European standard EN 12195 are suitable for the following temperature areas:

a) -40°C up to +80°C for polypropylene (PP)

b) -40°C up to +100°C for polyamide (PA)

c) -40°C up to +120°C for polyester (PES)

These temperature areas may change in chemical environments. In this case consult the manufacturer or supplier for advice.

A change of the ambient temperature during transport may influence the tension force of the textile lashing. The tension force should be checked after entering warm regions.

Chemicals

The resistance against chemical influences varies depending on the materials used for the textile lashing. Please observe the advice of the manufacturer, if the textile
lashings are subjected to chemicals. Also consider that the effect of the chemical influence will increase with rising temperatures. The resistance of synthetic fibre against chemical influences is summarised as follows:

a) Polyamides are resistant against alkaline but affected by mineral acids.

b) Polyester is resistant against mineral acids but affected by alkaline solutions.

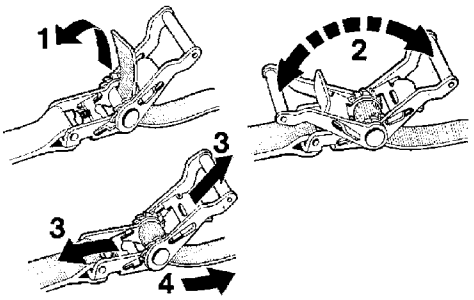

c) Polypropylene is hardly affected by acids and alkaline and is suited for applications that require high resistance against chemicals (except some organic solvents).

d) Harmless acid or alkaline solutions may be concentrated by evaporation and lead to damages. Affected textile lashings have to be taken out of service immediately, thoroughly rinsed in cold water and dried in the open-air.

Operation in danger zones

During loading and unloading observe low hanging aerial contact lines.

Application advices

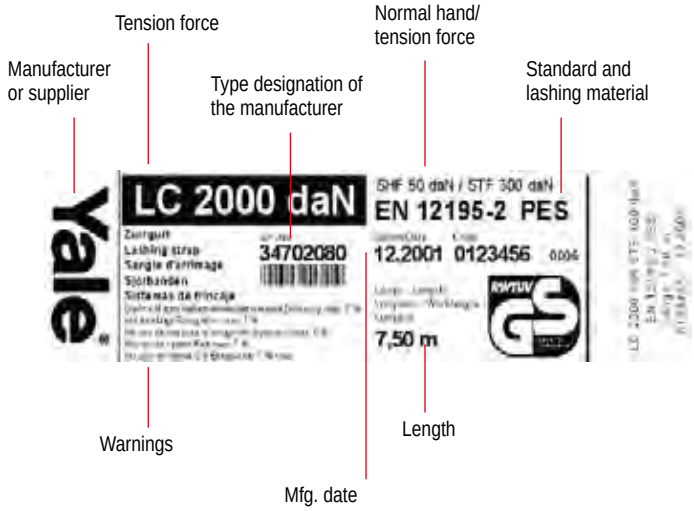

- Selection and use of textile lashings depend on the required tensioning force as well as the mode of application and type of cargo to be lashed. Size, form and weight of the cargo determine the correct choice in addition to the intended usage. For stability reasons, at least two lashing systems should be used for over top lashing and two pairs of lashing straps for diagonal lashing.
- The selected web lashing must be strong enough for the intended job and have the correct length for the type of lashing. Always consider adequate lashing practice: Attachment and removal of lashings should be planned before the start of the journey. In case of longer trips, partial unloadings must be considered. The number of lashings must be calculated as per EN 12195-1:2000. Over top lashing requires systems, which are labelled STF for over top lashing.
- On account of different characteristics and change of length under load, different lashings (e.g. lashing chains and web lashings) may not be used for lashing the same load. When using additional fittings or lashing devices, make sure that these correspond to the existing web lashing.
- During operation, flat hooks must be in contact with the full width of the hook mouth.

INFO

- Releasing of the lashing: Prior to releasing, make sure that the load stands safely (even without safety device) and does not endanger the operator by falling. Before departure check whether additional lashings will be required for further transportation after partial unloading has occured.
  This is also true for lashing elements which permit safe removal.
- Prior to unloading, the lashings must be released to an extent that the load stands freely.
- Make sure that the web lashing will not be damaged by the edges of the cargo. A visual inspection should be standard procedure before and after each usage.
- Only use textile lashings with legible identity labels.
- Textile lashings must not be overloaded:
  The max. hand force of 500 N (50 daN on the label; 1 daN = approx. 1 kg) may be applied with one hand only. Do not use cheater bars or levers unless they are part of the lashing element.
- Knotted textile lashings must not be used.
- Damages to the identity labels should be avoided by keeping them away from the edges of the cargo.
- Textile lashings should be protected against friction and abrasion and damages by sharp edges by application of protective sleeves and/or edge protectors.

Labelling

Maintenance and repair

Textile lashings may only be repaired if provided with legible identity labels. In case of accidental contact with chemicals, the web lashing has to be withdrawn from service and the manufacturer or supplier consulted for advice.

Criteria for disposal of textile lashings

Textile lashings must be withdrawn from service and returned for repair to the manufacturer in case of obvious defects. The following points are signs of possible damages:

Textile lashings:

- Cracks, cuts, notches and breaks in the load bearing strands and seams as well as deformations by heat;

Tensioning devices and fittings:

- Deformations, cracks, obvious signs of wear and corrosion.

The quantity of textile lashings has to be calculated according to EN 12195-1:2010

Only use lashing systems for over top lashing which show STF on the label. For easy identification of the required quantity of textile lashings or existing lashings needed for the cargo to be lashed refer to the following table, which has been calculated with friction coefficients of $\mu = 0.2$, $\mu = 0.4$ and $\mu = 0.6$ at various angles of elevation α.

- The calculation refers to situations with min. two, however max. ten textile lashings.
- Whenever possible, always use a slip resistant mat with a certified friction coefficient of 0.6!
- Always operate with the highest possible angle of elevation and lash as steep as possible!!!
- The friction coefficients are applicable for clean and dry surfaces, well covered from frost, ice and snow. In case of moisture refer to the direct lashing method or double the amount of textile lashings!

INFO

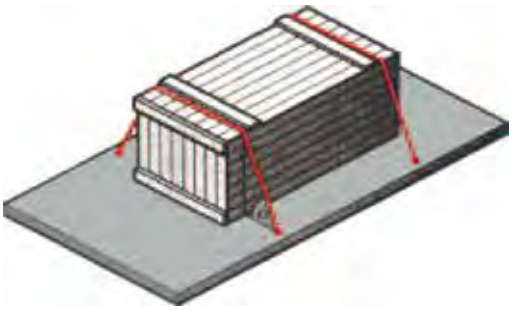

Friction factors according to EN 12195-1:2010

Combination of materials in the contact surface	Friction factor μ	when using a slip resistant mat
Cut timber against fabric base laminate/plywood	0.5	0.6
Cut timber against grooved aluminium	0.4	0.6
Cut timber against steel sheets	0.4	0.6
Cut timber against shrink films	0.3	0.6
Shrink films against fabric base laminate/plywood	0.4	0.6
Shrink films against grooved aluminium	0.4	0.6

ZGR-XL-50-2500-2-SPH	N34712510	two-part - with double J hook	2500	50	10000

Long lever ratchet
with precise interlocking. Device for controlled release (securing against tipping load).

GKH - with twisted snap hook

SPH - with double J hook

KLH - with claw hook

INFO

Other end fittings (hooks) and individual prints on webbing are available on request.

Other lengths on request.

ZGR-XLZ-50-2500
Ratchet lashing with long lever pull ratchet

Made from polyester (PES), EN 12195-2
50 mm - lashing capacity LC 2500 daN.

Features

- Standard tension force STF 500 daN at standard hand force SHF 50 daN.
- Long lever ratchet with precise interlocking.
- Ergonomic pull-type design.
- Standard lenghts 8 m and 10 m.

INFO

Other end fittings (hooks) and individual prints on webbing are available on request.

Other lengths on request.

ZGA Automatic ratchet lashing

Made from polyester, EN 12195-2

Features

- With automatic ratchet.
- Quick and precise fixing of load.
- Stepless adjustment.
- Easy rolling of webbing strap.
- PVC coated S-Hook to protect the loading space.

Technical data ZGA

ZGZB-KS-PP-70	192020360	up to 70

ZGZB-KSP-PP
Edge protector profile

Manufactured from polypropylene or recycled cardboard, to protect edges of loads. Length up to 6 m.

Technical data ZGZB-KSP-PP

Model	Art.-No.	Dimensions mm
ZGZB-KSP-PP	N39160004	190 x 190 x 20

ZGZB-ARM
Slip restraining mats

Manufactured from compressed rubber granulate to achieve a defined friction coefficient of μ = 0.6.
Even if an emergency stop or evasive action is being taken – the cargo trucks or train wagons must not move. But only in very few cases the vehicle structure alone will offer sufficient load security.
For this reason, slip restraining devices should belong to the standard equipment of every professional transport. Slip restraining mats will decrease the danger which emanates from plain loading platforms. They will reduce the required total pre-tensioning forces during over top lashing of loads and will contribute – together with the textile lashings – that the loads will form a single unit with the vehicle or wagon.
The slip restraining effect will benefit especially those products, which do not stand a high surface pressure.
The dangers resulting from incorrect load lashing practices are often underestimated. Acceleration forces in standard driving situations are close to the dead weight of the load.

INFO

The friction force FW of a slip restraining mat impedes load displacement and is physically explained as follows:

FW = m x G
G = Weight force
m = Friction value

The difference between inertial force F and friction force FW is called securing force FS.

FS = F - FW

The securing force FS is the strength which has to be absorbed by the safety devices.

Model	Art.-No.	Dimensions mm
ZGZB-ARM-250-8	N39170001	1000 x 250 x 8

RLSP
Load binders

Lashing capacity 4000 - 10600 daN

The load binder is a universal tool to restrain and secure loads and freight. Manual operation of the binder lever extends or retracts the threaded spindles. Tension is upheld by the self-locking threads.

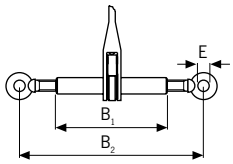

The load binder is fitted with shortening hooks for direct attachment to chains or with clevis ends for use with existing fastening devices.

ASH
Weld-on hooks

Capacity 1000 - 8000 kg

Weld-on hooks model ASH are universal attachments for use on trucks, excavators, low loaders and spreader beams, etc. The forged safety latch has high lateral stability and an ergonomic shape. Every weld-on hook has an identification number so that its history can be traced back through forging to the origin of the material.

The hook can be welded without any special preparation, e.g. prewarming.

The hook and safety latch are epoxy resin coated for added corrosion protection, the return spring is made from stainless steel.

RSE-SRS Yaletex Entertainment round slings with steel rope inserts

BG-certified according to DGUV 17 (former BGV C1) according to EN 1492-2, EN 13414-1/A1 and EN 13414-3 appendix A

- Steel rope with loose polyester cover
- With black single sleeve, PU-starched and thermally fixed
- Identification label sewn into a transparent protective cover
- Control window for checking the rope core
- Minimum edge radius 6 mm
- Proven heat resistance from -40 °C up to +150 °C
- The steel cable insert eliminates the requirement of DGUV 17 for a secondary safety device

GTG
Gas cylinder transport harness made from polyester (PES)

Gas cylinder transport harnesses are the simple and cost-effective way of safely transporting gas cylinders at height (e.g. with a winch).

Four different models with diameters of 14 cm, 25 cm or 30 cm cover a wide range of applications.

Features

- 2 pairs of eyes for transporting gas cylinders of different heights.
- GTG K 14 and GTG K 25 with Velcro fastener for easier loading of the harness.
- Easy handling due to low weight.
- UV-resistant, no material ageing or embrittlement
- Gentle handling of the gas cylinders.
- Moisture-resistant fabric, thus preventing frost damage.
- Low elongation (< 4 %)

INFO

Yale hoists and trolleys are not designed for passenger elevation applications and must not be used for this purpose.

Technical data GTG and GTG K

Material Handling Equipment

Pfaff-silberblau industrial trucks are ideal for transporting and stacking loads on pallets in factories.
The comprehensive range of products offers the correct model for numerous applications; be it for different route lengths or degrees of utilization, gradients and ramps or areas with a corrosion hazard.

From pallet trucks, manual stackers to electric stackers and elevating platforms – you will find the appropriate solution.

Load Moving Systems

Yale heavy load moving systems for the safe transportation of heavy loads of up to 100 t.

Products range from separately used load moving skates to complete systems.

MATERIAL HANDLING EQUIPMENT

Table of contents >>

INFO

This user information presents a general review regarding the application of material handling equipment and does not substitute the existing operating instructions for specific industrial trucks and elevating platforms!

Operating industrial trucks as well as lifting operations must be carried out by competent persons. When operated correctly, our products will offer the highest degree of safety, avoid damage to products and people and present a long life expectancy.

Modification of delivery condition

Design and construction of material handling products must not be altered by e.g. assembly of outside supplied components, bending, welding, grinding, cutting-off parts, adding boreholes, removal of safety devices or fitting of attachments.

Limitations of operation

Loading

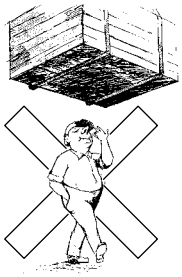

The rated capacity (WLL) indicated on the product is the maximum load which must not be exceeded.

Transport of people

Transport of people with industrial trucks is generally forbidden!

Operation in danger zones

Lifting or transport of loads must be avoided while personnel are in the danger zone.
Do not allow people to stay on or below a raised load.
Do not place hands or feet under the raised fork frame or load on account of the imminent danger of crushing or shearing.

Inspection before starting work

- Prior to starting work, the unit must be inspected for obvious deficiencies and failures. Operational checks must be performed to ensure lifting, lowering and travel operate correctly.
- Check the parking brake is effective and the key switch operates correctly to protect against unauthorised use.
- Load carriage and forks must not show obvious defects (deflections, cracks or other wearing).
- Wheels and tires must not be defective.
- The hydraulic system must be in perfect order (lifting, lowering, density).
- The functional capability of the collision protective device should be checked.
- Battery charging status, fastening and cable connections of the battery as well as battery plug must be inspected for appropriate status as well as the battery cell lids (dry, clean).

INFO

You will find the General Terms and Conditions at the end of the catalogue.

Please note the information on our training courses on page 4.

Application advices

- Our material handling equipment must be operated on in-plant areas only.
- Only use industrial trucks in perfect condition and with legible identity plate.
- Industrial trucks may only be operated by skilled people, who have been instructed (in theory and practice) by the responsible user.
- The travel speed must conform to local conditions.
- Industrial trucks must be operated on flat, level and even ground.
- The operator must make sure that the load unit is in perfect condition and safely attached.
- Pallets may be transported individually only.
- Industrial trucks must not be used as car jacks.
- Industrial trucks must not be used in areas which are not illuminated suffiently.
- Forks may not be used as levers.
- Loading of just one fork, e.g. for lifting of a machine, is strictly forbidden.
- Industrial trucks may not be operated in direct contact with foodstuffs.
- Never turn the hand lever 90° in order to stop the truck.
- The industrial truck must not be operated in explosive atmospheres (special versions on request).

Maintenance and repair

- To ensure safe operation, all material handling equipment must be subjected to regular inspections according to the maintenance instructions provided by the manufacturer.
- Material handling equipment, which is due for maintenance normally at least once per year, unless adverse working conditions dictate shorter periods.
- Inspections and repairs must be performed by competent persons or specialist workshops that use original spare parts. Inspections and repairs have to be recorded consecutively.

Inspections

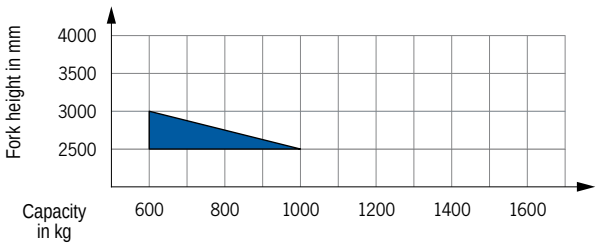

- Inspections are visual and functional and shall establish that the product has not been damaged by incorrect transport or storage. In addition check for damage, wear, corrosion or other deficiencies as well as completeness and function safety devices.
  Inspections are instigated by the user.
  Die Prüfungen sind vom Betreiber zu veranlassen.
- Material handling products have to be cleaned prior to inspection. The cleaning procedure must not cause chemical damages (e.g. no acid – embrittlement) no incorrect temperature stress by e.g. flame cleaning or possible concealment of cracks due to excessive material abrasion (sand blasting).
  We shall be pleased to consult you in this respect!
- Inspection of fork frame
  The fork frame has to be checked regularly for obvious defects, deformations and cracks as well as wear and corrosion.
- Inspection of control handle
  The control handle must be checked regularly for obvious defects, deformations, cracks. Moreover, check screws for fixed seat.
- Inspection of oil level
  Check oil level every six months (oil viscosity 30 Cst at 40°C). At ambient temperature around 0°C we recommend AVILUB RSL 22.
- Inspection of lubrication and density
  Bolts, axles and push rods should be cleaned and lubricated depending on application with e.g. Shell FD or comparable grease.
- The hydraulic unit has to be checked regularly for density.

HU 25-115 TS SILVERLINE (Tandem rollers) Hand pallet truck

HU 25-115 ES SILVERLINE (Single rollers) Hand pallet truck

Capacity 2500 kg

For the professional transportation of palletised goods and box pallets under demanding conditions.

Features

- Ergonomic safety control handle for one-hand operation of lifting, driving and lowering.
- Ergonomic rubber control handle for safe handling.
- Low maintenance hydraulic pump with hard chromium plated piston.
- Frame and forks in robust steel construction, adjustable connecting rods, especially hardened axles and the high quality powder coating ensure a long life expectancy.

Optional: Parking brake

Hand pallet truck SILVERLINE with a wider loading width

Capacity 2000 - 2500 kg

For the professional transportation of special pallets, e.g. brickyard pallets or american pallets.

Features

- Ergonomic safety control handle for one-hand operation of lifting, driving and lowering.
- Ergonomic rubber control handle for safe handling.
- Low maintenance high performance hydraulic pump with hard chromium plated piston and pressure relief valve.
- Frame and forks in robust steel construction, adjustable connecting rods, especially hardened axles and the high quality powder coating ensure a long life expectancy.
- Steering angle of 105 degree to each side for easy handling in confined spaces.

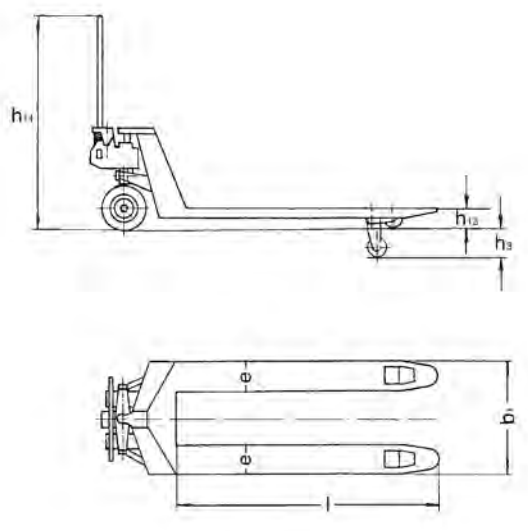

Optional: Parking brake

HU 20-115 VATP PROLINE
Hand pallet truck stainless steel version

Capacity 2000 kg

For the professional transportation of palletised goods in corrosive areas.

Features

- Ergonomic safety control handle for one-hand operation of lifting, driving and lowering.
- Low maintenance high performance hydraulic pump with hard chromium plated piston and pressure relief valve. Hydraulic unit made of stainless steel resp. bronze.
- Frame, adjustable connecting rods, bolts and the torsion tube are made of high quality stainless steel.
- Steering angle of 105 degree to each side for easy handling in confined spaces.

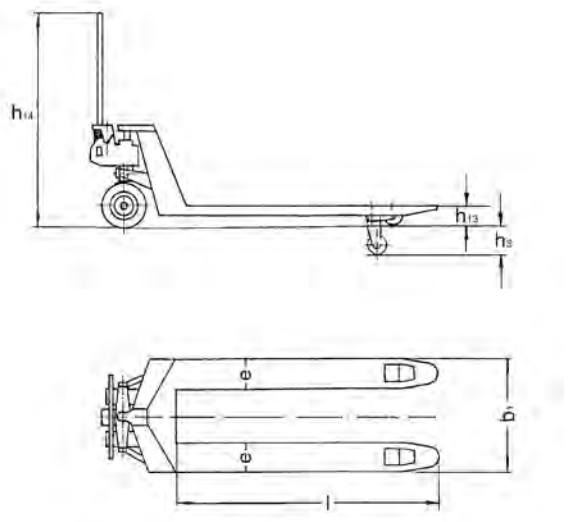

INFO

The operator is responsible for an analysis of the working conditions in order to assess the suitability of the hand pallet truck.

HU W-20 GL GREENLINE
Hand pallet truck with weighing system

Capacity 2000 kg

For transportation and weighing of palletised goods and box pallets. For simple weighing jobs and a rough calculation of total weights, e.g. when loading lorries.

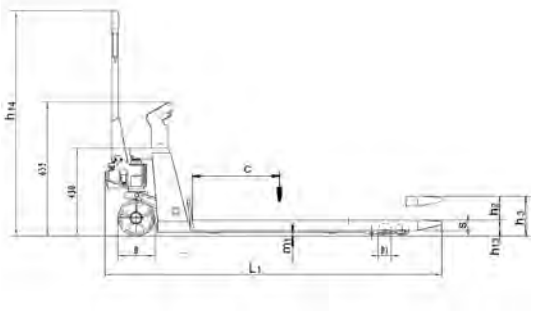

Features

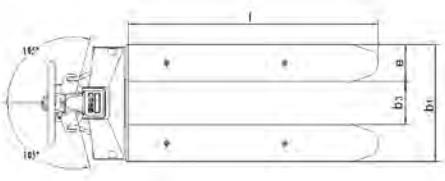

- Ergonomic safety control handle for one-hand operation of lifting, driving and lowering
- Measuring range from 0 up to 2000 kg in 1 kg steps
- Easy to read LCD display
- Accuracy: 0.2 % of the end value

Scope of delivery

- Integrated battery and charger

HU HS 10 B
Scissor pallet truck with manual-hydraulic lift

Capacity 1000 kg, Fork height max. 800 mm

A combination of hand pallet truck and elevating platform for the transport and raising of palletised loads to various departments.

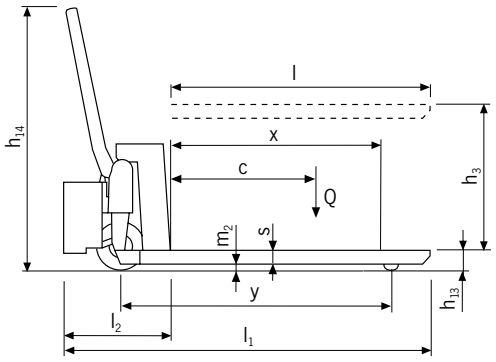

Features

- Safety control handle with the functions: Quick-lift - lifting - lowering.
- Lowering speed can be finely metered for sensitive lowering of the load.
- One-stage hydraulic for increased robustness.
- Overload protection by pressure relief valve.
- Safety supports guarantee sure standing when the forks are raised.
- Low noise and smooth running with standard tyres: steer rollers and load rollers – polyurethane.

Technical data HU HS 10 B

Model	HU HS 10 B

HU ES 10 B
Scissor pallet truck with electric-hydraulic lift

Capacity 1000 kg, Fork height max. 800 mm

The HU ES 10 B increases the usefulness of the HU HS 10 B by saving operating time for demanding applications with frequent lifting and lowering operations.

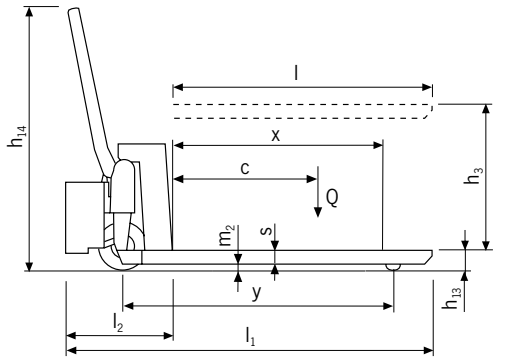

Features

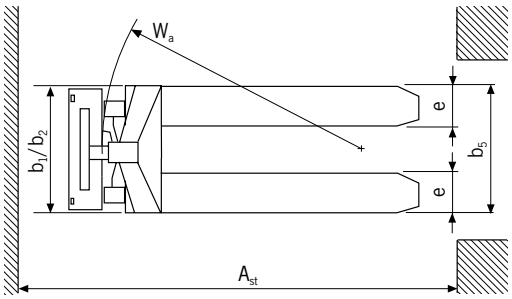

- Ergonomic control button for the hydraulic unit fitted in the handle.
- In case of a battery failure the manual use of lifting and lowering is still guaranteed.
- Quick electric-hydraulic lifting of the load, pressure relief valve protects against overloading.
- Low noise and smooth running due to polyurethane steering and load rollers as standard.
- Additional tilting protection for the load rollers.

Scope of delivery

- Battery and integrated battery charger

EGU 15 E *Li-ION*
Electric pallet truck

Capacity 1500 kg

Ideal for internal transport of palletised goods on even ground, covering short to medium distances.

The EGU 15 E is the new generation of electric pallet trucks. With its compact dimensions and new Lithium battery, it is an ideal alternative to the standard pallet truck and, with only 123 kg service weight the perfect driving device on a truck.

Supplied as standard with a replaceable battery the discharged battery can be exchanged with a fully charged battery within seconds, minimising the amount of disruption to the work cycle. Charging time for the battery is only 2.5 hours.

Features

- Maintenance-free rechargeable Lithium battery
- Integrated battery management system controls all important parameters and performance of the lithium battery.
- Charging time of only 2.5 hours, intermediate charge is possible
- Integrated PIN code panel with LCD display
- Curtis-Controller and CAN-Bus technology
- Infinitely variable driving speed
- External battery charger for charging with a 230 V plug socket
- Battery charge indicator and operating hour counter
- Entry rollers ensure smooth entry into bottom-boarded pallets

Scope of delivery

- Maintenance free rechargeable Lithium battery 24 Volt/20 Ah (30 or 36 Ah as option)
- External charger

Optional: replaceable battery with 20 Ah, 30 Ah or 36 Ah

Fast battery change – with a single touch

Li-ION Akku

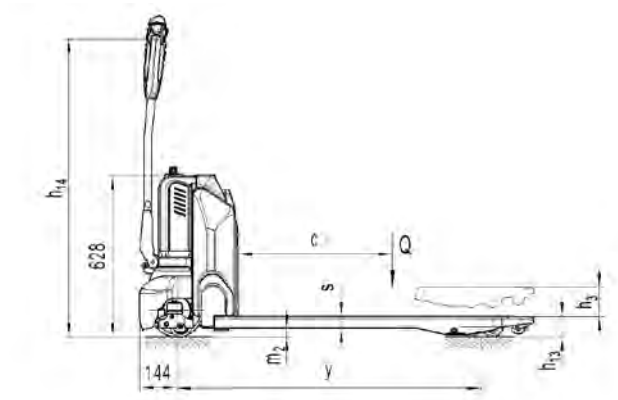

This battery offers much longer operational periods and overall lifetime with shorter charges.

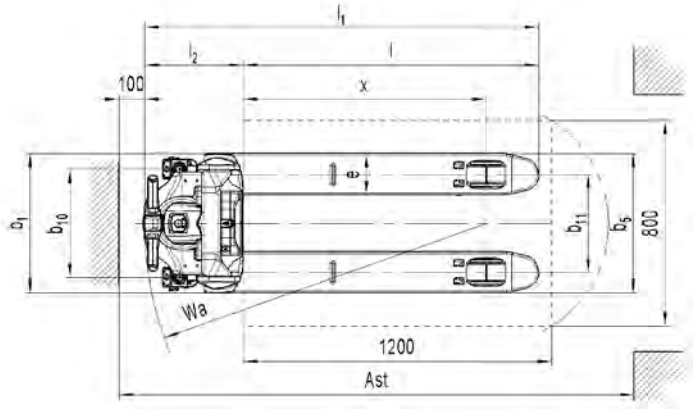

- The Li-ION battery has a lifespan of up to 3000 charging cycles.
- Charging time of only 2.5 hours.
- Intermediate charge is possible without affecting the lifetime of the battery.
- No loss of power when the battery charge state drops.

EGU PS 14
Electric pallet truck

Capacity 1400kg

Electrical drive, electrical lifting

Ideal for the transportation of palletised goods within a warehouse environment.
Due to the extremely small turning circle it is also ideal for working on ramps or taking along on a lorry. The powerful motor allows fast operation.

The truck is available in three versions:
EGU PS 14 Basic
EGU PS 14 Plus und
EGU PS 14 ***Li-ION***

Features

- Reduced dimensions: L2 only 410 mm.
- Creep speed button for pin-point work in confined spaces
- Reliable impulse control for stepless regulation of driving speed
- Integrated battery charger for charging on a 230 V plug socket
- Digital display for battery status

EGU PS 14 Basic

The unit is supplied with a DC traction motor and a tubular steel drawbar with integrated controls. The Basic version is the entry level model.

EGU PS 14 Plus

The Plus Version with the powerful Gel battery gives a plus in capacity and a longer battery life. The Plus also includes a maintenance-friendly AC traction motor with reduced power consumption and higher driving speed. The ergonomically designed multifunctional drawbar contains all operating and control functions, such as hour meter and charging indicator.

EGU PS 14 ***Li-ION***

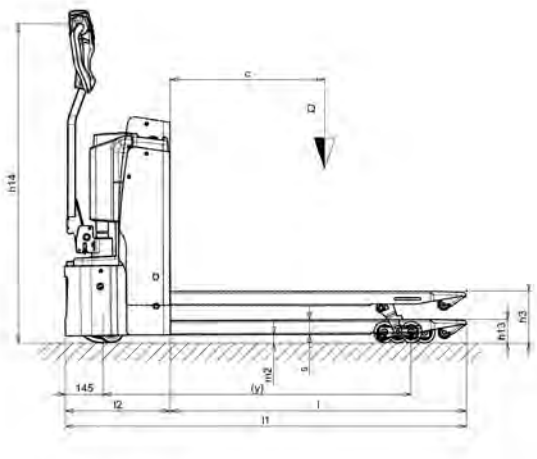

These versions offers much longer operational periods and overall lifetime of the battery with shorter charges.

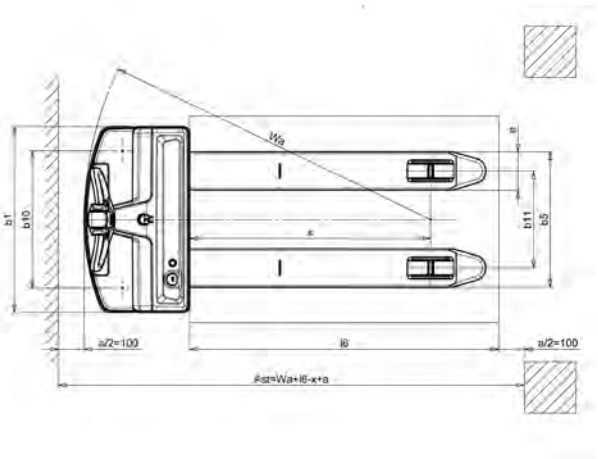

- The Li-ION battery has a lifespan of up to 3000 charging cycles.
- Charging time of only 2.5 hours.
- Intermediate charge is possible without affecting the lifetime of the battery.
- No loss of power when the battery charge state drops.

[1]VG ... Solid rubber, PUR ... Polyurethane

Our top seller with over half a million units sold!

Ergonomically designed control handle with rubber coating for better grip

Infinitely variable lowering speed

Reinforced construction for greater stability

Fork entry rollers make easy entry into the wide side of Euro pallets

Galvanized, maintenance-friendly, and extremely durable hydraulic unit with integral reservoir. The enclosed hydraulic system protects against damage.

5 different tyre combinations to suit all your needs

HV 0516
Manual drive stacker

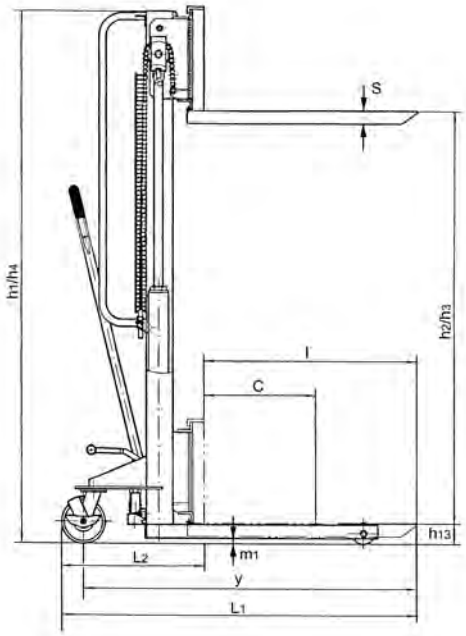

Capacity 500 kg

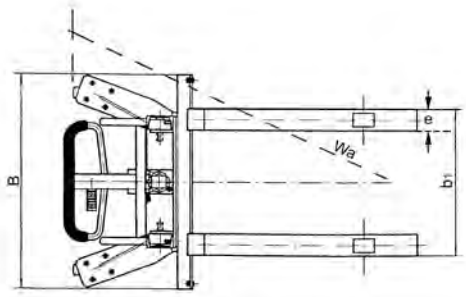

Ideal for the occasional, internal application of stacking and transporting of palletised goods, loading and unloading of shelves and lorries.

Features

- Ergonomic safety control handle for one-hand operation of lifting, driving and lowering.
- Handlebars for easy operation.
- Lowering speed can be finely metered for sensitive lowering of the load.
- Single-acting hand pump with increased lift per handle stroke.
- Robust mast construction with hard chromium plated piston.
- Steering roller with brake for safe parking of the hand stacker.

Technical data HV 0516

HV 1008 and HV 1016
Manual drive stacker

Capacity 1000 kg

Ideal for the occasional, internal application of stacking and transporting of palletised goods.

Features

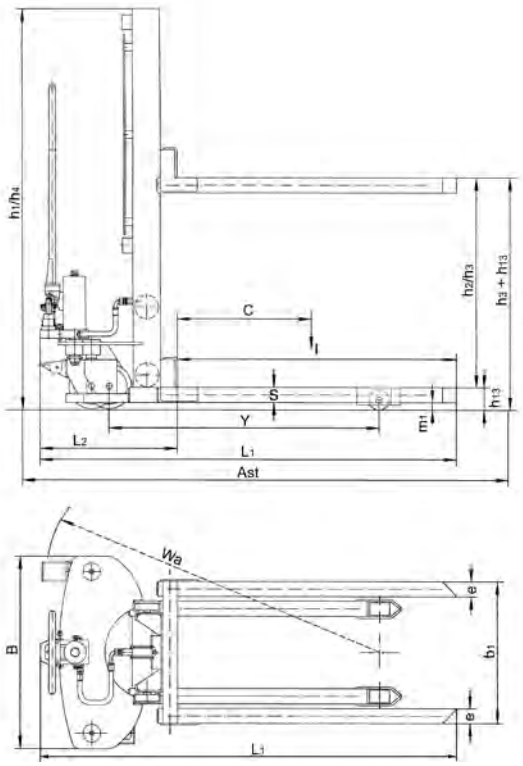

- Ergonomic safety control handle for one-hand operation of lifting, driving and lowering.
- Easy handling due to forced steering rollers.
- Lowering speed can be finely metered for sensitive lowering of the load.
- Single-acting hand pump with increased lift per handle stroke.
- Quick-lift for loads up to 100 kg.
- Robust mast construction with hard chromium plated piston.
- Steering roller with brake for safe parking of the hand stacker.

EHH PSE
Manual drive stacker with electric-hydraulic lift, manually movable

Capacity 1000 kg,
Fork height max. 3000 mm

Suitable for occasional applications of stacking and transporting palletised loads, also for use in confined areas and for short distances.

Features

- Good maneuverability and easy handling due to positive steering of the unit.
- Compact electric-hydraulic lifting device and overload protection.
- Finely metered lowering of load through pressure relief valve and adjustable lowering valve.
- Retention by parking brake.
- Robust frame with two load and two steer rollers
- The maintenance free battery can be charged at any 230 V plug socket.

Scope of delivery

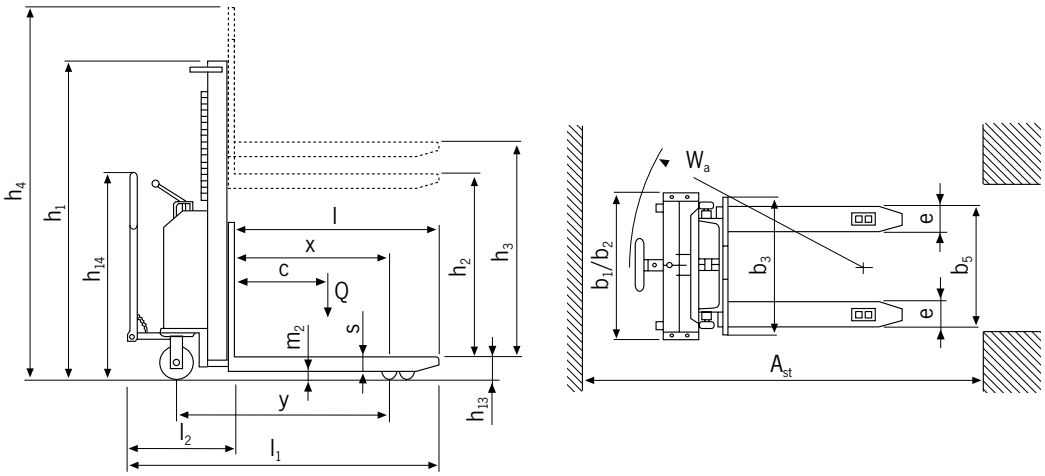

- Battery and battery charger included.

EHH PS
Manual drive stacker with electric-hydraulic lift, manually movable

Capacity 1000 - 1200 kg, Fork height max. 3500 mm

Suitable for occasional to medium applications of stacking and transporting palletised loads, also in confined areas.

Features

- Easy to operate via tie-rod guides to both steer wheels.
- Compact electric-hydraulic lifting device and overload protection.
- Finely metered lowering of load through pressure relief valve and adjustable lowering valve.
- Mast welded from precision profiles, fork carriage with maintenance free guide rollers.
- Retention by parking brake.
- Robust frame with two load and two steer rollers

Scope of delivery

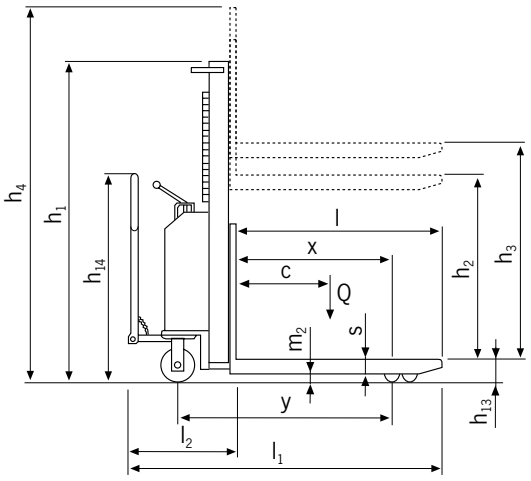

- Battery and battery charger included.

EGV PSL 1016 II
Electric pedestrian stacker

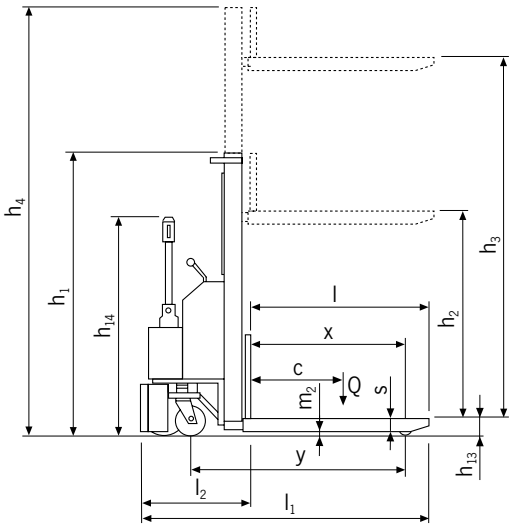

Capacity 1000 kg,
Fork height max. 1600 mm

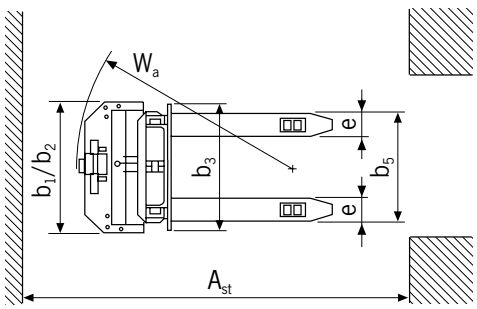

The EGV PSL 1016 II is the ideal solution for indoor transportation and of palletised goods within a warehouse environment for short haul and medium work load applications.

Features

- The slim single mast and the laterally, ergonomic tiller ensure a free view onto the goods as in front of the stacker.
- The fork thickness of 60 mm enables an easier entrance inside pallets, while working in elevation.
- Easy maintenance – the convenient access opening at the bottom of the forklift allows an immediate disassembly of motor wheel without lifting the machine.
- The reduced overall width of 794 mm improves the handling of goods in narrow spaces and corridors.
- Ultra-slow drive function enables exact driving in very tight spaces.
- Gel battery as standard.

EGV PSL II
Electric pedestrian stacker

Capacity 1200 kg,
Fork height max. 3500 mm

The revised EGV PSL II is the ideal solution for indoor transportation and of palletized goods within a warehouse environment for short haul and medium work load applications.

Features

- The wide mast and the laterally, ergonomic tiller ensure a free view onto the goods as in front of the stacker.
- All functions are comfortably controlled from the tiller head.
- The reduced overall width of 800 mm improves the handling of goods in narrow spaces and corridors.
- Ultra-slow drive function enables exact driving in very tight spaces.
- Easy maintenance – the convenient access opening at the bottom of the forklift allows an immediate disassembly of motor wheel without lifting the machine.
- Improved drive- and lifting speed.
- The spiral charging cable which can be stored in the chassis enables easy charging at every socket.

Optional

Plus version

- Maintenance-free Gel batteries with increased working hours and a doubled lifetime expectancy.
- Finely metered lifting and lowering due to a soft valve control.
- Faster lowering speed.

Freelift version

- The EGV PSL 1229 II plus Freelift has a fullfreelift. It can lift the forks up to 1500 mm without increasing the base mast height.

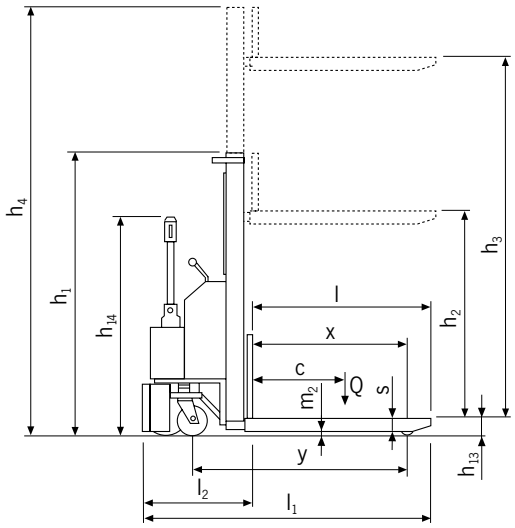

Scope of delivery

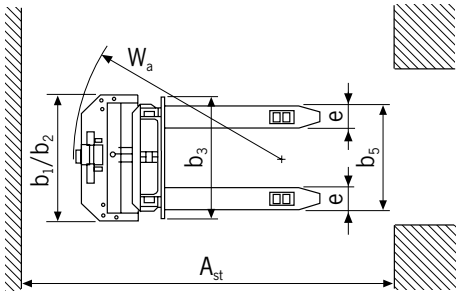

- Battery and battery charger included.

EGV PSH II
Electric pedestrian stacker

Capacity 1200 - 1600 kg,
Fork height max. 5000 mm

The revised edition of the model range EGV PSH II is the professional solution for indoor transportation and stacking of palletised loads over longer distances and higher capacity utilization.

Features

- Multifunctional control handle with integrated drive switches and lifting and lowering functions directly on the control handle.
- Proportionally controllable lifting and lowering functions for better positioning of the loads.
- Compact overall dimensions, only 800 mm wide allows operations in narrow corridors.
- Ultra-slow drive function enables exact driving in very tight spaces.
- Drive and lifting speeds have been increased for this revised model.

Optional

- Drivers platform
- Freelift

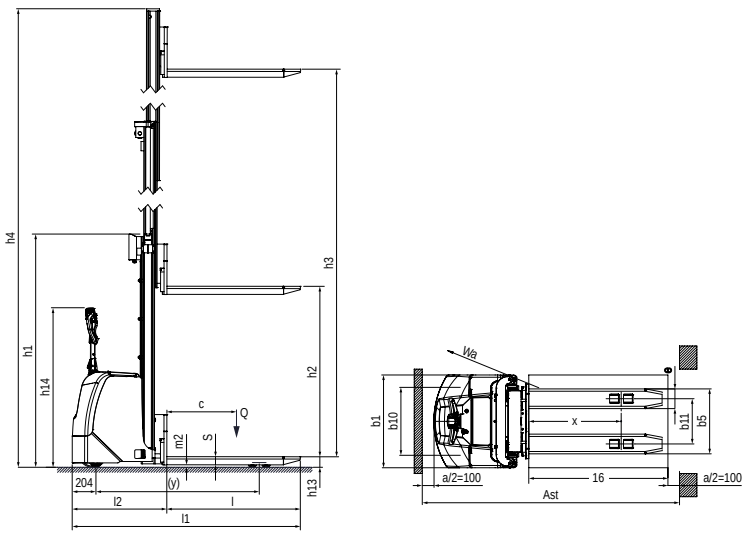

INFO

Battery and battery charger are to be ordered separately.

MLP 90 E
Minilifter

Capacity 90 kg,
Lifting height 1568 mm

The Minilifter is designed to be maneuverable and versatile for indoor use, where small loads are lifted frequently. It has a low unit weight and non-marking tyres that make it an indispensable tool in many areas.
The stepless adjustable handlebars provide a comfortable grip for the user.

Features

- For easy and safe maneuvering, it has 4 swivel castors, 2 of which are fitted with parking brakes.
- The forward wheel arms clear under Euro pallets.
- Electric lifting and lowering function with soft start.
- The ergonomic push handle is infinitely height-adjustable.
- Cable remote control with spiral cable.
- The connection system makes it possible to use various, optionally available load handling attachments.
- Maintenance-free, precision lead screw and nut for many years of reliable service. The safety slip clutch protects the drive in both directions.
- The lowering safety cut-out eliminates accidental crushing and entrapment when lowering the platform.
- The electronic overload protection effectively prevents accidental lifting of excessive load.
- Maintenance-free battery that can be charged at any socket.
- Robust construction with chrome plated chassis, hard chromium plated piston and pressure relief valve.
- Covered chain deflection for increased safety.

Optional

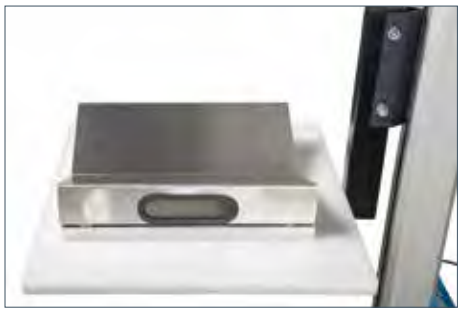

- Swiveling V-block with platform for roller material.
- Mandrel for roller material.

Scope of delivery

- Integrated battery 24 V, 7.2 Ah.
- External charger 24 V, 1.5 A.

Optional: Mandrel

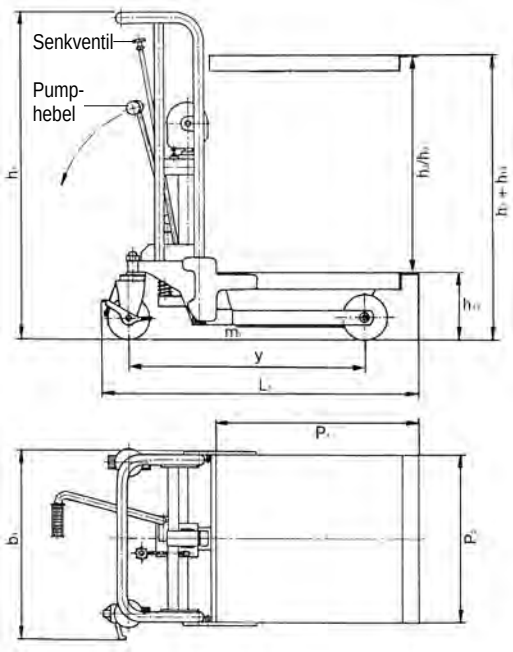

PRAKTIKUS HP
Platformlift, mobile

Capacity 400 kg,
Platform height max. 1200 mm

For the occasional, internal application of lifting and transporting of goods.

Features

- Easy lifting by tiltable foot pedal.
- Lowering speed can be finely metered for sensitive lowering of the load.
- Ergonomic handlebar for easy operation.
- Steering roller with brake for safe parking of the hand stacker.
- Robust construction with chrome plated chassis, hard chromium plated piston and pressure relief valve.
- Covered chain deflection for increased safety.

HX
Scissor elevating platform, mobile with single scissor

Capacity 150 - 750 kg,
Platform height max. 1000 mm

For the independant lifting and supplying of loads within a warehouse environment.

Features

- Hydraulic lifting of the load with foot pedal.
- Lowering speed can be finely metered for sensitive lowering of the load.
- Ergonomic handlebar for easy operation, tiltable for model HX 150.
- Steering roller with brake for safe parking of the hand stacker.
- Robust construction with hard chromium plated piston and pressure relief valve.

HX-D
Scissor elevating platform, mobile with double scissor

Capacity 350 kg,
Platform height max. 1300 mm

For the independant lifting and supplying of light up to medium loads within a warehouse environment.

Features

- Hydraulic lifting of the load with foot pedal.
- Lowering speed can be finely metered for sensitive lowering of the load.
- Ergonomic handlebar for easy operation.
- Steering roller with brake for safe parking of the hand stacker.
- Robust construction with hard chromium plated piston and pressure relief valve.
- According to DIN EN 1570-1, DIN EN ISO 3691-5.

HF…SM
Scissor elevating platform, mobile with single scissor and - manual hydraulic

Capacity 150 - 1250 kg,
Platform height max. 1050 mm

HF…SE
- electric hydraulic system

Capacity 300 - 1250 kg,
Platform height max. 1050 mm

For lifting and supplying goods independent of the location.

Features

- Manual hydraulic system with pedal or electric hydraulic system with dead man function – a main current connection is not required.
- High safety due to pressure relief and lowering valve.
- Robust single scissor construction, above 300 kg with solid steer scissor.
- Pivoting platform with mechanic adjustment for safe maintenance work.
- Compact design with low OAH.
- Steering and fixed rollers with service-free roller bearings. One steer roller can be locked in position for parking.
- According to DIN EN 1570-1 and machinery directive 2006/42/EG.

Scope of delivery

- Models with electric-hydraulic pump are supplied complete with battery and charger.

HT 08 M
Mobile elevating work bench with - manual-hydraulik lift

HT 08 E
Mobile elevating work bench with - electric-hydraulic lift

Capacity 800 kg,
Platform height max. 1475 mm

For lifting and transporting of heavy loads in manufacturing and assembly processes.

Features

- TRIPLEX mast for lifting heights up to 1475 mm.
- Ergonomic handlebar for easy operation.
- Double-acting hand pump with increased lift per handle stroke (HT 08 M).
- Electric hydraulic unit with battery for comfortable and easy lifting (HT 08 E).
- Steering roller with brake for safe parking of the hand stacker.
- Robust construction with hard chromium plated piston.

Scope of delivery HT 08 E

- Battery and integrated battery charger.

HTF-G SILVERLINE
Flat scissor lifting table

Capacity 1000 kg

For the professional lifting and handling of loads within a warehouse environment.

Features

- Extremely low-profile design reducing cost and effort for a pit-installation.
- The ramp allows loading the platform directly with a pallet truck or trolley.
- Safe operation due to push-button for up/down in dead man's control, as well as emergency stop.
- Overload protection by pressure control valve.
- Integrated pipe burst valve and mechanical rests safe maintenance and operation.
- According to DIN EN 1570-1 and all UVV safety regulations.

Technical data HTF-G

Model	HTF-G
Art.-No.	40047380
Capacity, kg	1000
Platform length L, m	1.45
Platform width B, m	1.14
Platform height min. C, mm	82
Lift H, m	0.76
Lifting time, sec.	18
Motor, kW	0.75
Weight, kg	250

HTF-U SILVERLINE
Flat scissor lifting table

Capacity 1000 kg

For the professional lifting and handling of loads within a warehouse environment.

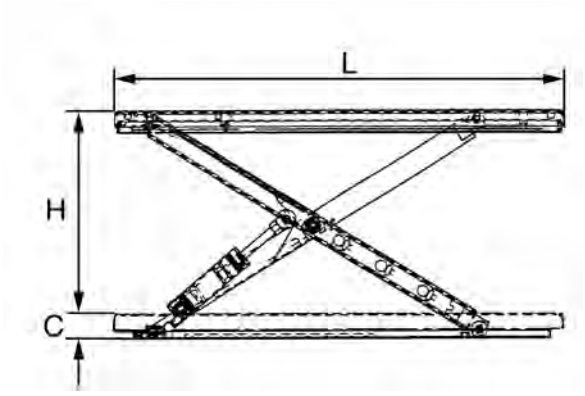

Features

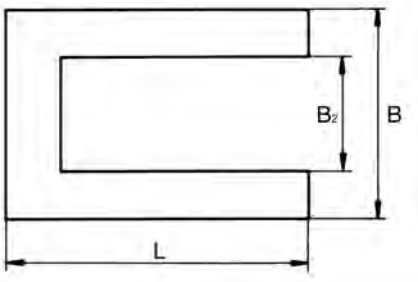

- Extremely low-profile design lowering the cost and effort for a pit installation.
- U-design for direct access of industrial trucks.
- Safe operation due to push-button for up/down in dead man's control, as well as emergency stop.
- Overload protection by pressure control valve.
- Integrated pipe burst valve and mechanical rests safe maintenance and operation.
- According to DIN EN 1570-1 and all UVV safety regulations.

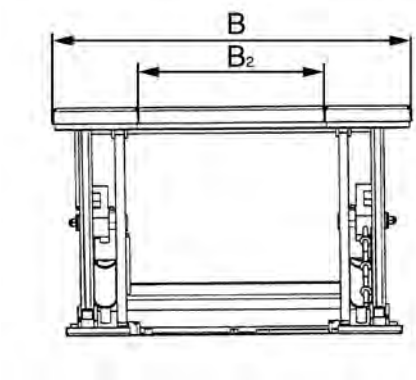

Technical data HTF-U SILVERLINE

Model	HTF-U

HTH-E SILVERLINE
Handling lifting table

Capacity 500 - 3000 kg

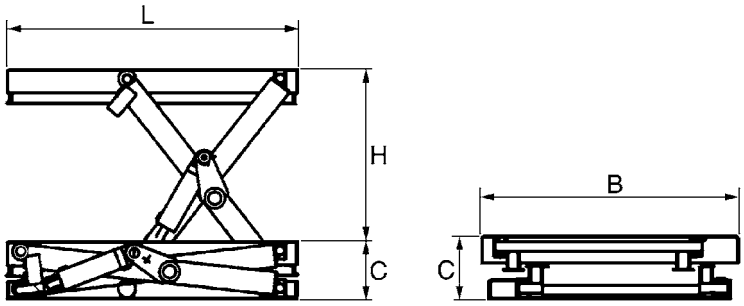

For the professional lifting and handling of heavy loads and palletised goods at workplaces.

Features

- Smooth hydraulic ram action of working height for ergonomic working conditions.
- Safe operation due to push-button for up/down in dead man's control, as well as emergency stop.
- Overload protection by pressure control valve
- Integrated pipe burst valve and mechanical rests safe maintenance and operation.
- According to DIN EN 1570-1 and all UVV safety regulations.

Motion and Lifting Technology

Customers worldwide benefit from our products, services and complete solutions from project planning to maintenance.

Our product portfolio includes screw jacks, linear actuators, lifting columns, lifting tables, electric and manual wire rope winches, screws and nuts, bevel gear boxes and accessories.

Motion technology moves and transports critical payloads and goods from a wide variety of industries with absolute reliability. The different components and solutions can be combined as required, including: screw drives, lifting columns, screw jacks and electromechanical components of linear drive technology.

Lifting technology delivers innovative solutions that lift, pull and position loads in the industrial sector and also in extreme climatic conditions. The carrying capacity range is large. These products provide efficient power transmission and safe operation.

In addition to the transport components, Columbus McKinnon Engineered Products GmbH (formerly Pfaff Verkehrstechnik) supplies the complete planning, assembly and maintenance of turnkey lifting systems for buses and trains.

- Diverse standard products
- Individual custom-made products and complete solutions
- Innovative solutions for efficient lifting, pulling and positioning of loads
- Constructive quality assurance
- Installation and commissioning
- Safety check according to UVV
- Spare parts and repair service
- Explosion-proof versions

BETA Electric Wire Rope Winches

The robust BETA EL electric wire rope winches lift, lower and pull a wide variety of loads in all areas of application.

The tried-and-tested technology of the electric wire rope winches ensures trouble-free, safe and permanent operation up to 7,500 kg. The modular principle enables high flexibility. Excellent components offer safety and a long service life.

The BETA EX electric wire rope winch models are designed for special applications. These models work reliably where there is a risk of ignition from explosive atmospheres. Since the place of use for the electric wire rope winch is very individual, the right winch can be easily put together with the flexible modular system.

The BETA EL winch with DGUV V17/18 approval lifts loads absolutely safely over people: it lifts and positions equipment and decorations precisely in trade, industry and in public rooms such as a theatre. The electric cable winch is also available in the D8 PLUS version for positioning static elements.

- Grooved cable drum with large wire rope capacity
- Variable rope entry through two rope attachments on the left and right side
- Very quiet running by diagonal interlock
- Frequency converter for stepless speed
- Electronic overload protection from 1000 kg lifting capacity
- According to the accident prevention provisions
- The modular system enables a wide range of configurations
- High quality surface coating
- Maintenance-free spur gear running in an oil bath

Lifting Tables HTPA and HTPL

In industrial and plant construction or in loading technology, the lifting tables complete existing production or assembly lines. The different loading and assembly situations often require individual lifting table solutions. This can be covered by innovative technology combined with extensive accessories.

The HTPA, a particularly stable lifting table, was designed for one-sided load distribution and increased point loads. With loads from 1000 kg to 6000 kg and a lifting height of 800 mm to 2000 mm, the lifting table HTPA counts to the absolute standard. As a PLC-controlled means of production, it can be adapted to various processes.

The loading lift table HTPL is the ideal solution when it comes to the reliable loading and unloading of heavy loads.

With loads of up to 6000 kg and lifting heights of 1100 mm to 1600 mm, it supports the logistics industry. Traversability, passenger transport and outdoor use are possible.

- Lifting table solutions for ergonomic work
- Highest quality and safety standards
- High performance and stability
- Long service life with low maintenance
- Higher lifting loads, other platform sizes on request
- Lifting tables in special versions (e.g. double scissors, tandem scissors or tilting versions)
- Extensive range of accessories
- Individual solutions, investment advice, installation and maintenance according to customer requirements

Screw Jacks

Lifting elements as a proven and reliable drive solution: Available in many standard sizes with lifting forces from 5 kN to 2000 kN and in different lifting speeds.

The SHE worm gear screw jacks are optimally used where high loads have to be positioned and lifted precisely with medium duty cycles and moderate lifting speeds. With a load capacity range from 500 kg to 200000 kg convince with a housing made of nodular cast iron.

The stainless screw jacks with swivel brackets SSP, developed for the requirements of modern paper machines, are for a variety of mechanical lifting solutions in the load range from 5000 kg to 25000 kg.

The screw jacks MERKUR are used where high loads with a moderate duty cycle and low dynamics have to be positioned, e.g. for the safe opening and closing of the maintenance hatch for wind turbines. With a load capacity range from 250 kg to 50000 kg.

- Lifting, lowering, tilting or moving
- Self-locking trapezoidal spindle
- Grease-lubricated version
- Driving speed up to 1500 min-1
- Worm gear in two gear ratios, normal and slow
- Worm shaft case-hardened and ground
- All-round processing, with the Merkur series, allows for easy alignment
- Corrosion-resistant and explosion-proof finishes available

Linear Actuators

The robust linear drives easily withstand lifting forces of up to 100 kN. They have been developed for demanding applications and offer high performance with a compact size.

The electromechanical linear drives ELA impress in rough everyday life with an encapsulated aluminum housing with worm gear and axial bearing with a push and guide tube construction. Our axial bearing system ALS is a universal drive for a wide range of applications in industry and mechanical engineering. Thanks to its own gearbox and a thrust and guide tube construction, the high-performance linear drive HLA can also cope with extreme requirements under the most adverse environmental influences.

The PHOENIX lifting column withstands lifting speeds of 5 to 250 mm/s at a maximum duty cycle of 20%/h. The powerful drive technology is specially designed to absorb extremely high compressive and tensile forces of up to 25 kN. Proven quality under extreme conditions with integrated linear guide.

- Different sizes of the linear drives with lifting forces from 5.5 kN to 100 kN
- Short safety nut possible with trapezoidal design
- Self-locking with trapezoidal thread spindles, optional ball screw
- Lifetime lubrication with high-quality grease and encapsulated design, low-maintenance
- PHOENIX models in single and multi-stage design
- Extensive range of accessories
- Explosion proof versions available

Steerman® SX and S
Heavy load moving systems

Capacity 10 - 60 t

These universal heavy load moving systems have been designed for the safe and cost saving transport of loads up to 60 tons. Individual configuration of steering and rear skates also allows higher capacities.
Transport of heavy loads (e.g. machines, construction parts, steel structures) is normally made with a stable three point loading system.

Transport of extremely bulky or heavy loads with an unfavourable center of balance, may also be executed with a four point loading system. The robust towing bar in connection with the unique turntable on large diameter thrust bearings allows effortless steering of the load.
The rear skates are aligned parallel by means of a tie rod and kept in position, thus ensuring time saving and smooth transportation of the load.

The skates are powder coated and all connecting elements corrosion-resistant. Highest safety requirements have been considered.

SX-10

Rollers with ball bearing

Chassis from ductile graphite iron

Ball bearing for turning plate

Features

- The modular design ensures an extremely simple operation and simultaneously offers a wider range of combinations.
- The construction of the load moving systems is extremely robust and resistant to distortion.
- The skates are smooth-running and provide an incredibly low rolling resistance even with the heaviest loads.
- Twin rollers (instead of one wide roller) ensure low rolling resistance even at a narrow curve radius.
- The universal joint suspension of the roller groups contributes to a positive contact when travelling over uneven floors.
- The roller wheels are manufactured with abrasion-resistant, elastic Polyamidee. They are protected against breakage and have high chemical resistance.
- Each individual roller is made from high tensile material which ensures extremely quiet running.
- The rollers are suitable for all in-plant floors and will not damage normal floor covering.
- The load moving systems can be easily dismantled and facilitate transport even in small trucks.
- The load moving systems have been developed for professional applications and are practically maintenance-free.
- All rollers are provided with two encapsulated, lifetime lubricated ball bearings.
- The front steering skate is equipped with an amply dimensioned axial ball bearing underneath the turntable.
- The front and rear skates are available individually.

LF
Load moving skates and systems with fixed wheels

Capacity 1 - 6 t

The components of the load moving skates can be universally combined and are ideal for the transport of medium heavy loads of all kinds.
The components can be used individually or adapted to a load moving system. The units are maintenance-free.

Features

- Solid forged steel construction.
- Anti-slip rubber lining.
- Abrasion-resistant nylon wheels.
- Models LF-2,5 and above are provided with two enclosed ball bearings per wheel.

LFL
Load moving skates and systems with steerable wheels

Capacity 1 - 2 t

The components of the load moving skates can be universally combined and are ideal for the transport of medium heavy loads of all kinds.
The components can be used individually or adapted to a load moving system. The units are maintenance-free.

Features

- Solid forged steel construction.
- Anti-slip rubber lining.
- Abrasion-resistant nylon wheels.
- Model LFL-1-2 uses two steerable and two fixed wheels.
- Model LFL-1-4 and LFL-2-4 uses four steerable wheels.

LX
Heavy load moving system

Capacity 6 t and 12 t

These three point loading systems comprise of a steerable front and a pair of adjustable rear skates.

The heavy load moving systems are supplied ready-to-use.

The steerable front skates (LX-6F and LX-12F) are provided with an appropriate towing bar. The rear skates (LX-12R) are identical in construction and are equipped with two adjustable tie rods.

The wheels are made of hardwearing nylon.

The front and rear skates can accept each 50 % of the total capacity.

Hydraulic jacks & tools

A characteristic of this “force-oriented” hydraulic programme is the operating pressure which can be as high as 700 bar. This guarantees a simple and safe generation of highest forces. In spite of this the units remain compact, portable and easy to operate. High-pressure hydraulic systems of this type are used in universal assembly and repair operations whereby their application in day-to-day operations is almost unlimited. The component programme allows the individual configuration of simple and also complex system solutions.

They are used in the following main industrial areas:

Heavy industry, mining, shipbuilding, offshore, aviation industries, power stations, steel construction, steel making and processing, building construction, bridge and tunnel construction, heavy steel and tank construction, metal processing workshops, and many more.

Yale

HYDRAULIC JACKS & TOOLS

INFO

Why hydraulics?

Hydraulics is the kind of power transmission which allows the greatest density of forces. There is no other kind of power transmission that will transmit comparable high forces with the same construction size.

Hydraulic tools

Hydraulic tools are a special type of power tools, which can be used for general assembly and repair jobs with preferably high force in lowest spaces.
Simple applications, clearness of the programme in line with robustness, short-term deliveries and universal operation possibilities have made Yale hydraulic components indispensible tools also for elaborate functions.
The unlimited power of hydraulic tools is used in applications like lifting, levelling and positioning of heaviest loads, installations of machines, assembly of complex structures as well as in general repair of maintenance jobs.
The components can also be operated in fixtures for clamping, testing, pressing, extracting, crimping, cutting, riveting and many more.

How to reach high forces in hydraulics?

area	x	pressure	=	force
effective piston area	x	system pressure	=	force
cm^2	x	bar	=	daN

Example: Hydraulic cylinder YS-10/

14.3 cm^2	x	700 bar	=	10010 daN
			=	100 kN
			=	10 t

Linear conversion of pressure force

The above formula shows that pressure forces can be converted linearly.

Example:
A 10 ton cylinder presses at:

700 bar	-	100 kN	=	10 t
350 bar	-	50 kN	=	5 t
100 bar	-	14 kN	=	1.4 t
1 bar	-	0.14 kN	=	0.014 t

INFO

The system pressure determines the force of the hydraulic cylinder. The oil displacement determines the piston travel speed.

Basic terms in hydraulics

Pressure

is the system pressure generated by the pump, which, however, can also be produced by an external power source, which acts on the hydraulic cylinder.

Force

is always the pressure transferred by the hydraulic cylinder (only with counterpressure).

Stroke

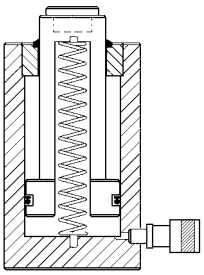

is the travel distance to be achieved by the force (no-load stroke, loaded stroke, return stroke).

Piston travel speed

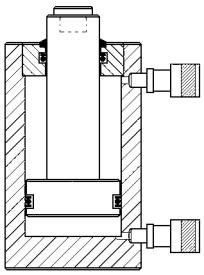

is the time, in which the piston of the hydraulic cylinder is to pass a certain travel distance (stroke) (no-load stroke + loaded stroke, return stroke).

Hydraulic cylinders

are available in many different designs, however, with only two basic function principles:

single-acting
The piston travel is achieved via hydraulic pressure and returned by spring activation (pressure build-up in one direction only).

double-acting
The piston travel is achieved via hydraulic pressure in both directions.
(Push forces and pulling forces are possible).

Hydraulic hand pumps

The function of a hydraulic hand pump is to convey hydraulic oil (no-load stroke) and to generate pressure, which will be converted by the hydraulic cylinder into force (loaded stroke). Hydraulic hand pumps are independent from energy and can be used in every-day applications. They are easily portable and render an extremely high power generation in connection with a corresponding hydraulic cylinder.
Hand pumps require certain manpower and are often replaced by motor pumps in case of permanent duty and high oil quantities, respectively.

Hand pumps are distinguished by:

1. Oil displacement volume (1st stage/2nd stage).

2. The function of the hydraulic cylinder: single-acting/double-acting.

Motor pumps

transmit an oil flow as soon as the pump unit is driven by the electric motor. Contrary to hand pumps, the oil flow is also available when the hydraulic cylinder is not activated (e.g. during work breaks).

Hydraulic valves

Valves are used in hydraulics to control the oil flow (generated by either hand or motor pump) in terms of direction, pressure and oil volume.

Directional valves

are required to control the direction of the oil flow and thus the work motions of the connected hydraulic cylinder (advance - hold - return).
Depending on the type of pump and cylinder, 2-, 3- or 4-way valves may be employed.

3/3-way valves for single-acting cylinders

4/3-way valves for double-acting cylinders

Controls are available with either manual or electro-magnetic valves (the latter with remote cable control).

Pressure valves

are employed to limit the system pressure in a hydraulic system or within a part of the oil circuit. Pressure valves or pressure relief valves are also installed as safety devices in order to avoid excessive increase of the system pressure beyond a given value.

Shut-off and throttle valves

are used to easily shut-off hydraulic lines by hand. On account of their sensible control mode, these valves can also be applied to throttle an oil flow and thus to control the piston advance at both lifting or lowering of the load.

Safety check valves

are used for those applications where pressure drops must be avoided.

Pressure switch

can be set to any pressure value in order to switch on/off parts of the hydraulic circuit.

For your safety

Hydraulic units are extremely robust and durable. Nevertheless you should observe the following instructions for your own safety and to increase the life expectancy of the product:

- Never exceed the max. pressure (capacity) of the hydraulic units.
- Avoid eccentric loading of the piston.
- The load must always be positioned centric and parallel on the piston. Avoid point loading!
- Never pass under a raised load, if this is not supported additionally.
- Hydraulic units must be kept clear of heat (e.g. during welding).
- Protect hydraulic hoses against damage and strong kinks. Hydraulic hoses should lie freely in a wide curve. Avoid tensile load.

Eccentric loading

In order to obtain a long life expectancy, hydraulic cylinders series YS, YLS, YFS, YCS, YCH, YH and YPL are manufactured from chromium-molybdenum steel, the cylinder housings and piston rods are hardened and tempered and provided with bronze guides.
Generally, hydraulic cylinders should not be loaded eccentrically, as this can lead to reduced lifetime. In practice, a lateral loading cannot be fully avoided. In this case the maximum system pressure and the stroke of the cylinder should only be used by 50 %. Ensure that the load always rests on the total area of the steel saddle and the piston, respectively. Also ensure that the entire bottom area of the hydraulic cylinder always stands on a level, sustainable ground surface.
This applies especially to flat cylinders!

Repairs

Repair and maintenance should be performed by qualified personnel only. Make sure to use original spare parts only.

INFO

INFO

Hydraulic cylinders with Yale Chro-Mo-Design

Yale hydraulic tools are designed for professional operation. A tool is only as good as its basic material. Therefore, our cylinders are manufactured from high quality chromium-molybdenum steel and are heat-treated.

Double bronze bearings

Practice has shown that hydraulic cylinders used as a tool in workshops or on construction sites are frequently subjected to eccentric loading. Yale hydraulic cylinders are provided with double bronze bearings on the plunger, which minimizes friction between plunger and body during lateral loading.

Hard chromium-plated piston

Offers excellent protection against mechanical damage and corrosion. Excellent sliding characteristics in conjunction with the upper bronze bearing in the stop ring.

Metric mounting threads and standard parts

To facilitate the installation of hydraulic cylinders in jigs and fixtures and auxiliary structures. The metric standard throughout the entire series simplifies service operations and repairs. Cylinders carry the full load even under maximum operating pressure.

Stop ring carries full pressure

As a safety factor the stop ring on all Yale hydraulic cylinders carries the full load even under maximum operating pressure.

Delivered ready to use

Yale hydraulic cylinders are delivered ready to use incl. female coupler half, hardened saddle and mounting threads; larger cylinders come with carrying handle or transportation lugs. This also applies to customised combinations which are always supplied fully assembled.

Hardened alloy steel saddle

Metric mounting threads in cylinder base, plunger and cylinder collar (depending on series)

Two bronze bearings minimize friction even in cases of eccentric loading

YS
Universal cylinder

Single-acting with spring return, capacity 5 - 100 t

Robust construction with long guides allows the units to withstand abuse and better tolerate eccentric and side loading, yet is convenient to use with only one quick-release coupler hose connection and a spring return.

Universal cylinders are designed for all jobs where high forces but compact dimensions are required: e.g. straightening steel constructions, removing parts like shafts, axles, lifting, positioning, weighing, supporting, testing as well as for all general assembly and repair applications. Due to the various mounting threads the cylinders can easily be installed in clamping devices, welding fixtures, frame presses etc.

Features

- Yale ChroMo-Design.
- Operating pressure max. 700 bar.
- Single-acting with spring return.
- Robust design with long piston bearings to withstand eccentric loading.
- Cylinder body and piston are made from solid chromium-molybdenum steel and heat-treated.
- Hard-chromium plated piston with replaceable, heat-treated saddle.
- Metric mounting threads on cylinder collar, in the base and piston rod (5 to 30 t).
- Stop ring can bear full capacity (pressure) and is fitted with dirt wiper.
- Interchangeable hardened saddle.
- Dirt wiper protects against dirt.
- Oil port thread 3/8 NPT.
- Incl. female coupler half CFY-1.
- YS-50/100 and YS-50/160 with carrying handle.
- YS-50/320 up to YS-100/200 with lifting rings.

INFO

Selection charts “cylinder/hand pumps” can be found on pages 438 - 439.

Travel-speed charts are supplied on pages 440 - 441.

Low-height and flat cylinders

Single-acting with spring return, capacity max. 10 - 100 t

Low-height cylinders are recommended for all lifting, pushing, levelling, pressing applications especially in tight working areas.

These very compact hydraulic cylinders are designed for lifting and positioning jobs as well as all general maintenance applications, where low height, portability and light weight are needed. These versatile cylinders are found in all industrial areas like steel mills, civil engineering, heavy construction industry, power plants, off-shore industries etc. Due to their short strokes flat cylinders should not be subjected to side loading.

Features

- Yale ChroMo-Design.
- Operating pressure max. 700 bar.
- Single-acting with spring return.
- Low height for tight working areas.
- Cylinder body and piston are made from solid chromium-molybdenum steel and heat-treated.
- Stop ring can bear full capacity (pressure) and is fitted with dirt wiper Dirt wiper protects against dirt.
- Oil port thread 3/8 NPT.
- Incl. female coupler half CFY-1.
- YLS-100/55 with lifting rings, YFS-100/15 with carrying handle.

INFO

Selection charts “cylinder/hand pumps” can be found on pages 438 - 439.

Travel-speed charts are supplied on pages 440 - 441.

Pull cylinder

Single-acting with spring return, capacity max. 10 - 51 t

Pull cylinders are able to produce extremely high pulling forces and can be controlled precisely by the use of hand pumps or power packs. In neutral position pull cylinders are fully extended. As soon as the cylinders are pressurized the forged links are drawn together. A built-in return spring extends the piston again as soon as the pressure is released.

Shipbuilding, heavy-vessel construction, steel construction, civil engineering as well as general repair and maintenance applications.

Features

- Yale ChroMo-Design.
- Operating pressure max. 700 bar.
- Single-acting with spring return.
- Can be operated in all positions (except model YPPS).
- Cylinder body and piston are made from solid chromium-molybdenum steel and heat-treated.
- Hard-chromium plated piston with replaceable, heat-treated saddle.
- Stop ring can bear full capacity (pressure) and is fitted with dirt wiper Dirt wiper protects against dirt.
- Forged, replaceable links.
- With carrying handle and piston protection cover.
- Oil port thread 3/8 NPT.
- Incl. female coupler half CFY-1.
- The pull cylinder YPPS-10/150 is equipped with an integrated hand pump similar to HPS-2/0,7 A.

INFO

Selection charts “cylinder/hand pumps” can be found on pages 438 - 439.

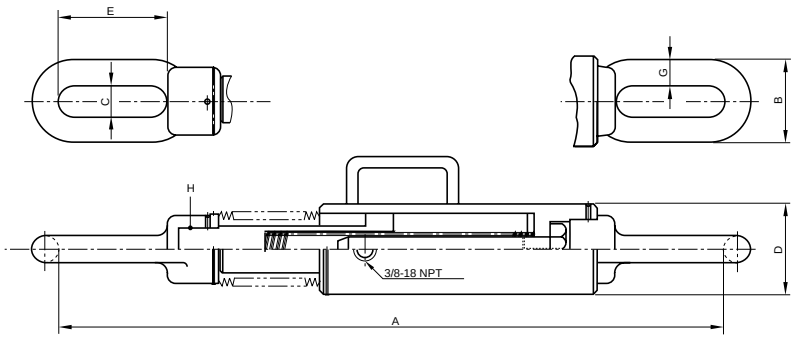

Travel-speed charts are supplied on pages 440 - 441.

Hollow cylinders

Single-acting with spring return, capacity 12 - 93 t

Due to the centre hole design a threaded rod can be placed through the hollow cylinders so that extremely high pulling forces can be achieved.

Hollow cylinders are used as the power component within hydraulic puller sets, for prestressing anker bolts, removing axles, shafts, bushings, extracting tubes, as well as for heavy-duty pulling applications.

Features

- Yale ChroMo-Design.
- Operating pressure max. 700 bar.
- Single-acting with spring return.
- With large centre hole diameter.
- Cylinder body and piston are made from solid chromium-molybdenum steel and heat-treated.
- Hard-chromium plated piston with replaceable, heat-treated saddle.
- Metric mounting threads at cylinder body and inside of piston.
- Stop ring prevents overtravel of the piston up to full operating pressure.
- Interchangeable hardened saddle.
- With inner and outer dirt wipers.
- Oil port thread 3/8 NPT.
- Incl. female coupler half CFY-1.
- From YCS-21/150 with carrying handle.
- From YCS-57/70 with two lifting rings.

INFO

Selection charts “cylinder/hand pumps” can be found on pages 438 - 439.

Travel-speed charts are supplied on pages 440 - 441.

Function principal of the hollow cylinders

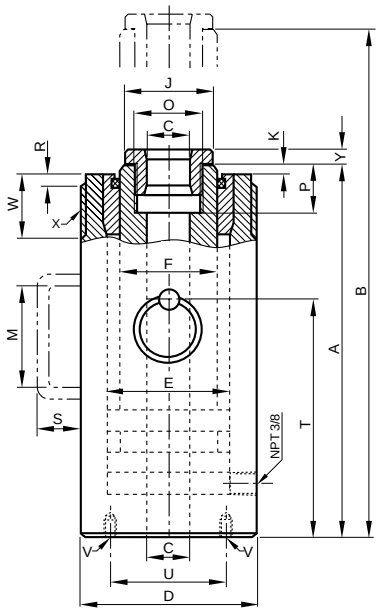

In connection with threaded rods hollow cylinders can produce extremely high forces which are helpful for various repair or assembly applications like removing press-fitted parts, prestressing anchors etc.
In addition, hollow cylinders are used as power source in puller sets and test rigs. By the use of long threaded rods and by readjusting the nut larger distances can be pulled even when using short cylinder strokes.

YCH
Hollow cylinders

Double-acting with hydraulic return, capacity 33 - 140 t

Basically, the applications are the same as for the single-acting hollow cylinders shown on the opposite page, but for this model range the return of the piston is done hydraulically by means of the second oil port. These double-acting hollow cylinders are used when the piston needs to be retracted quickly e.g. with high-cycle pulling applications.

Features

- Yale ChroMo-Design.
- Operating pressure max. 700 bar.
- Double-acting with hydraulic return.
- With large centre hole diameter.
- Cylinder body and piston are made from solid chromium-molybdenum steel and heat-treated.
- Hard-chromium plated piston with replaceable, heat-treated saddle.
- Metric mounting threads at cylinder body and inside of piston.
- Stop ring prevents overtravel of the piston up to full operating pressure.
- Interchangeable hardened saddle.
- With inner and outer dirt wipers.
- Oil port thread 3/8 NPT.
- Incl. 2 female coupler halves CFY-1.
- All cylinders with carrying handle, from model YCH-62/250 with 2 lifting rings.

INFO

On request we supply special hollow cylinders with pulling capacities up to 600 tons.

Selection charts “cylinder/hand pumps” can be found on pages 438 - 439.

Travel-speed charts are supplied on pages 440 - 441.

YH
Universal cylinders

Double-acting with hydraulic return, capacity 5 - 200 t

These extremely robust double-acting cylinders are especially designed for universal heavy-duty lifting and positioning applications as well as for industrial production and assembly jobs. The cylinders offer high pushing and pulling forces. The double-acting design assures a high piston retraction speed.

Major areas of application are bridge building and civil engineering, off-shore, ship building, etc. They can also be used as power source in frame presses, stamping fixtures and other industrial uses where high pushing and pulling forces are required.

Features

- Yale ChroMo-Design.
- Operating pressure max. 700 bar.
- Double-acting with hydraulic return.
- Long bronze piston guidings.
- Piston strokes from 30 up to 500 mm.
- Cylinder body and piston are made from solid chromium-molybdenum steel and heat-treated.
- Hard-chromium plated piston with replaceable, heat-treated saddle.
- Metric mounting threads on cylinder housing, in the bottom of the cylinder body and in the piston rod.
- Stop ring can bear full capacity (pressure) and is fitted with dirt wiper.
- Interchangeable hardened saddle.
- Dirt wiper protects against dirt.
- Oil port thread 3/8 NPT.
- Incl. 2 female coupler halves CFY-1.
- From YH-30/200 with carrying handle.
- From YH-50/350 with 2 lifting rings.

INFO

For cylinders series YH accessories please see pages 382 - 383.

Selection charts “cylinder/hand pumps” can be found on pages 438 - 439.

Travel-speed charts are supplied on pages 440 - 441.

YEHB
High-tonnage cylinders

Double-acting with hydraulic return, capacity max. 140 - 1100 t

Cylinders of series YEHB are normally used for lifting, positioning or handling heavy loads. The double-acting function allows a faster piston return, even with longer hydraulic hoses.

Lifting and moving of large machinery, steel construction, bridges or similar loads, supporting of buildings and foundations.

Further applications are positioning, weighing, through pressing, stress testing or jacking of all kinds of loads.

Features

- Operating pressure max. 700 bar.
- Double-acting with hydraulic return.
- Generous guiding bands ensure a robust piston guiding.
- Hard chromium-plated piston.
- Stop ring as piston end stop.
- Interchangeable hardened saddle.
- Dirt wiper protects against dirt.
- Oil port thread 3/8 NPT.
- Incl. 2 female coupler halves CFY-1.
- Mounting threads on request.
- All cylinders have lifting rings.

INFO

Selection charts “cylinder/hand pumps” can be found on pages 438 - 439.

Travel-speed charts are supplied on pages 440 - 441.

YELB
Hydraulic cylinders with safety lock nut

Single-acting, gravity return
capacity max. 30 - 1100 t

Hydraulic cylinders with safety lock nut are recommended when loads have to remain in the lifted position over a period of time. The safety lock nut ensures a positive load hold in any position, and work can be carried out beneath the lifted load. Hydraulic pressure can be released so that cylinders work like mechanical supports. Pumps can be separated from cylinders.

Lifting and moving of large machinery, steel construction, bridges or similar loads, supporting of buildings and foundations.

For all heavy-duty jacking applications where a special safety factor is appropriate like lifting and lowering bridges, supporting buildings and foundations, jacking up heavy machines, steel sections, ship modules or similar loads.

Features

- Operating pressure max. 700 bar.
- Single-acting, gravity return.
- Generous guiding bands ensure a robust piston guiding.
- Hard chromium-plated piston with trapezoidal thread.
- Overflow hole ensures a definite piston end stop.
- Interchangeable hardened saddle.
- Oil port thread 3/8 NPT.
- Incl. female coupler half CFY-1.
- All cylinders have lifting rings.

INFO

Further piston strokes are quoted on request.

For tilt saddles for cylinders please see pages 378 - 379.

INFO

Selection charts “cylinder/hand pumps” can be found on pages 438 - 439.

Travel-speed charts are supplied on pages 440 - 441.

YEGB
High-tonnage cylinders

Single-acting, gravity return
capacity max. 140 - 1100 t

These inexpensive cylinders of series YEGB are used for all general lifting applications in any area of industry where heavy loads need to be lifted, lowered, levelled, positioned or supported.

Lifting and moving large machinery, steel construction, bridges or similar loads, supporting buildings and foundations.

For all heavy-duty jacking applications where a special safety factor is appropriate like lifting and lowering bridges, supporting buildings and foundations, jacking up heavy machines, steel sections, ship modules or similar loads.

Features

- Operating pressure max. 700 bar.
- Plunger in special piston guiding bands.
- Hard chromium-plated piston.
- Overflow hole ensures a definite piston end stop.
- Interchangeable hardened saddle.
- Oil port thread 3/8 NPT.
- Incl. female coupler half CFY-1.
- All cylinders have lifting rings.

INFO

Further piston strokes are quoted on request.

The use of tilt saddles is recommended.

Selection charts “cylinder/hand pumps” can be found on pages 438 - 439.

Travel-speed charts are supplied on pages 440 - 441.

AYB
Tilt saddles for cylinders

Tilt saddles should be used with YELB and YEGB cylinders in cases where cylinders are operated on non-parallel surfaces.

The saddles minimize inner friction caused by eccentric loading of the cylinders. The upper part of the saddle can pivot up to 5° in all directions. Tilt saddles are fixed in the piston by means of an O-ring.

INFO

Available for all cylinder series YELB, YEGB and YEHB.

AYS
Lifting claws, piston plates, base adaptors and extension tubes, load-spreading plates

Lifting claws

In connection with the corresponding hydraulic cylinder a lifting claw represents a compact, lightweight and versatile lifting unit. The lifting claws are screwed onto the collar thread of cylinder series YS. Claws can be placed under loads with minimum clearance.

When operating lifting claws, the following aspects have to be considered:

The hydraulic cylinders need to be able to support themselves against the load. The max. force of the cylinder is reduced by 50 %.

Piston plates

Piston plates can be screwed into the piston thread of cylinder series YS. They reduce the surface pressure and prevent the pistons from sinking into the ground. Also when using a piston plate in connection with a lifting claw the cylinder must be supported against the load.

Base adaptors and extension tubes

Extension tubes are mounted onto the bottom of cylinders series YS by means of the base adaptor and two hexagon socket screws (screws are included with the base adaptor). The use of extension tubes adds to the versatility of the standard cylinders.

Load-spreading plates

These load-spreading plates are recommended when slim cylinders are used for lifting operations. They prevent the cylinders from falling over and sinking into the ground. Robust steel design with carrying handle.

INFO

Build-up and description of Yale hand pumps

Hand pumps are the most common power source within the area of “High-Pressure Hydraulic Tools”. For this reason our hand pumps have been carefully designed and equipped with many details which make the pumps very versatile and handy in every-day applications.

Relief valve/hand wheel

The fine-adjustment relief valve in connection with the large hand wheel allows millimeter increments when lifting and lowering even highest loads. The fact that sometimes hundreds of tons are controlled by this hand wheel underlines the importance of this feature.

Sturdy “all-metal-design"

The robust pump head and the absence of any plastic parts result in a long service life and easy maintenance over many years. Plastic reservoirs filled with oil may present a fire risk in connection with welding or similar work!

Carrying handle

A handy carrying handle on all our hand pumps facilitates transportation enormously.

Pressure relief valves

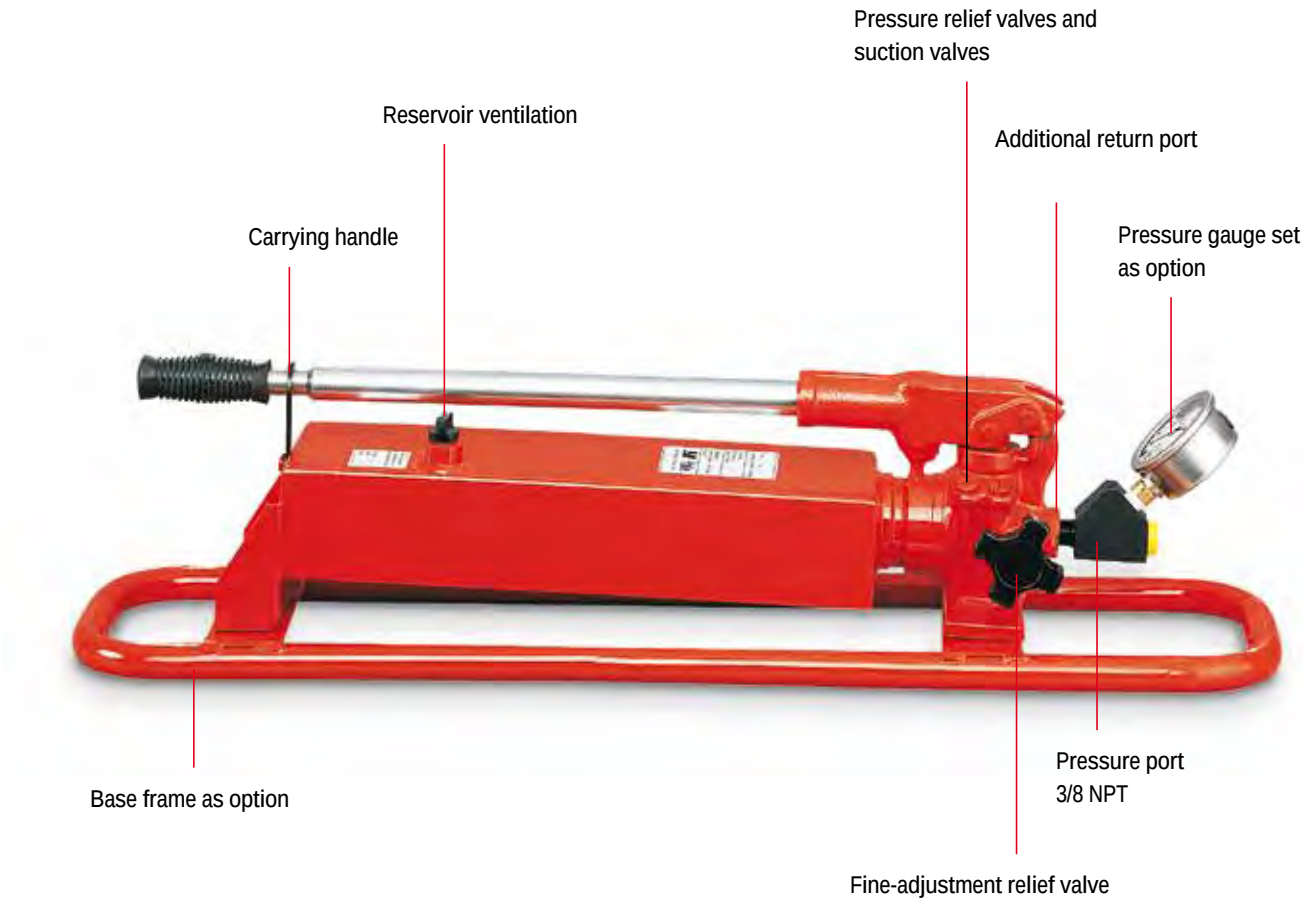

All hand pumps are equipped with two pressure relief valves. They are easily adjustable from outside if pumps must be re-adjusted or a lower operating pressure should not be exceeded.

Reservoir ventilation

All hand pumps are equipped with a reservoir ventilation plug. This ensures perfect suction of hydraulic oil and allows you to use the total oil capacity of the reservoir.

Two-stage output

All hand pumps have two-stage design (except HPS-1/0,7). This allows an increased speed and efficient working during unloaded conditions of the hydraulic cylinder. The switch-over from the low pressure to the high pressure stage is done automatically.

Delivered ready to use

All hand pumps are supplied ready to use incl. hydraulic oil.

Easy-maintenance-design

There is no need to disassemble the hand pumps in case of service work. All parts like suction and pressure valves, seals, packings etc. are accessible from the outside.

All hand pumps have the same design

The same design (build-up) for all hand pumps with the exception of the reservoirs allows the interchangeability of all components. Therefore spare part stocks can be kept to an absolute minimum. Only one spare part kit is necessary to service all hand pumps.

Excellent suction properties

Hand pumps suck and displace 100 % of their volume per stroke. This results both in a high efficiency as well as a rapid cylinder movement.

Interchangeability

All hydraulic cylinders, hand pumps and other components are fully interchangeable and can be combined with all other 700 bar hydraulic lines. All components have the standard oil port and same coupler parts.

Additional return oil port

All hand pumps are equipped with a return port to the reservoir. This detail is very advantageous as many hand pumps are integrated in more complex hydraulic circuits.

Base frame

On request you can get base frames for the most common hand pumps. These base frames add to the stability and protection of the hand pumps, in particular when used in the field or on a construction site.

Pressure gauge

Appropriate pressure gauges with the corresponding adaptors are shown in this catalogue.

Hand pump HPH-...

With integrated pressure gauge GGY-631 and gauge adaptor set GA-704.

Hand pumps for double-acting cylinders with relief valve and 4/3-way directional valve

Unlike conventional pumps, all hand pumps of the model HPH (with 4/3-way directional valve for double-acting cylinders) include a precision relief valve in addition to the directional control valve. Manual directional control valves switch over abruptly, thus causing undesired pressure surges in the system under load.
The additional relief valve in all HPH-hand pumps allows a precise lowering of the load without any pressure shocks. All components have the standard oil port and same coupler parts.

Further advantage of this design:

The pressure gauge shows the pressure as pushing and as pulling force. The combination of a 4-way directional valve with a sensitive relief valve allows a controlled pressure relief without pressure shocks.

INFO

INFO

Selection charts “cylinder/hand pumps” can be found on pages 438 - 439.

HPS
Hand pumps for single-acting cylinders

Hand pumps are easy to use and operate independently of any external energy source. They are designed for a maximum 700 bar system pressure and will allow each hydraulic cylinder to utilize its maximum capacity.

The two-stage system reduces pumping time.
Stage 1 allows rapid piston travel under no load or light load conditions. The pump automatically switches to stage 2 when the piston is loaded and a higher force is required from top. The hand pump is an all-steel construction designed for rough use and has a high-efficiency pumping action. The handle can be locked for easy carrying.

The large and easy-to-control return valve allows the operator to precisely control the return stroke. Other standard features include a large and easy-to-control hand wheel, air bleeding and oil filling plug, large support feet for stability, tilted tank to increase usable oil volume and ergonomic handle grip.

Features

- Operating pressure max. 700 bar.
- Two-stage operation with automatic switch-over (except HPS-1/0,7 A).
- Large reservoir volumes.
- With pressure relief valves, adjustable from the outside.
- Precision-adjustable relief valve (handwheel).
- Robust all-steel construction.
- HPH-pumps are equipped with a 4-way control valve plus a precision-adjustable relief valve.
- Oil port thread 3/8 NPT.
- Incl. oil filling.

Optional

- Pressure gauges with corresponding adaptors are also available as accessories.

INFO

Hydraulic hoses are the connection between hand pump and hydraulic cylinders and need to be selected separately. Please see page 413.

HPH
Hand pumps for double-acting hydraulic cylinders

With 4-way valve and relief valve (hand wheel)

All hand pumps of type HPH are designed as double-acting cylinders. Basically, they do not differ from series HPS, but are equipped with a 4/3-way directional valve.

The precision-adjustable relief valve remains unaffected and permits a sensitive pressure relief.

Optional

- Pressure gauges with corresponding adaptors are also available as accessories.

HPB
Base frames for hand pumps

These base frames add to the stability of your hand pump, in particular when used in the field or on a construction site where hand pumps are frequently operated on uneven and soft ground.

At the same time, the hand pumps are protected from sand, humidity and possible damage.

The assembly of the base frames is very easy; just three holes have to be bored to mount the frame to the hand pump.

TWAZ
Hand pumps

Operating pressure max. 2000 bar

These high-performance hand pumps allow a very rapid pressure build-up due to their two-stage design. Both pressure stages are equipped with a limiting valve which can easily be adjusted from outside.

High-pressure hand pumps are used for special applications like pressurizing hydraulic nuts and safety couplings, hydrostatic testing, bolt tensioners, high-pressure oil injection for bushing removal, pretensioning anchors, for test applications in laboratories and as a power source within test stands and propeller press systems.

Accessories for hand pumps TWAZ

Optional:
Pressure gauge, GGY-2500.

Optional:
Pressure gauge adaptor, GA-2000.

Optional:
Adaptor, FY-201
(M22 x 1.5 on G 1/4).

Optional:
Hydraulic hoses,
HH-2001-20,
pressure max.: 2000 bar.

FPS
Foot pumps

Operating pressure 700 bar

Used to operate single-acting hydraulic cylinders, especially for repeated applications, such as checking of welding samples, pressing of connection components (crimping), actuating of clamping devices, as well as for all applications, where it is necessary to keep hands free.

The pump can be used everywhere, as it is independent of an external energy source and is easily portable. An extremely good stability guarantees a comfortable and safe operation up to the highest pressure. It is a “real” foot operated pump, as the return stroke of the connected hydraulic cylinder is released by foot control.

Features

- Operating pressure max. 700 bar.
- Absolute stability due to large base plate.
- Minimized labour fatigue.
- Operating pressure adjustable. Valves accessible from the outside.
- Return stroke of cylinder also controlled by foot operation.
- Oil port 3/8 NPT.

Optional

- Pressure gauges and suitable adaptors.
- Hydraulic hoses

PY-04/2/5/2M PY-04/2/5/4M

PY-04
Electric motor pumps, portable

Operating pressure max. 700 bar

These light-weight but powerful two-stage pumps are particulary designed for maintenance and repair jobs. Depending on their type, they can either operate single-acting or double-acting hydraulic cylinders.

The ideal combination of manually operated valve and remote pendant control provides the operator with ample freedom of motion and ensures a safe “holding of the load”.

The remote pendant control (1.5 m) is used to start the motor even under full load. The function for both manual valves is as follows: - advance - hold - return -
With their light weight and convenient carrying handle, these pumps can be easily transported. Pumps are equipped with thermal overload protection and are supplied with hydraulic oil:

Operation of the power pump PY-04/2/5/2E:

By activating push-button number 1, the motor starts and the cylinder advances. In the neutral position the pressure is held. By activating push-button number 2, the solenoid valve is activated, the pressure decreases and the hydraulic cylinder retracts.

Operation of the power pump PY-04/2/5/2M:

The 2/2-way manual valve operates together with a pilot operated unloading valve, so that the two valve positions result in the following two control possibilities:

Valve handle position 1:
Cylinder holds pressure after motor stop.

Valve handle position 2:
Cylinder automatically retracts after motor stop.

Technical data PY-04

PAY
Mini hydraulic pumps, with compressed air driven motor

Operating pressure max. 700 bar

These mini-pumps are driven by an air-powered motor and can be connected to any supply source of compressed air. These compact low-cost pumps can operate all single-acting or double-acting hydraulic cylinders up to a max. operating pressure of 700 bar.

Due to large reservoirs, large cylinders or multiple cylinders can be operated. The use of an inline air filter-lubricator is recommended.

The hydraulic pressure can be infinitely adjusted on the regulator of the air-lubricator unit. The air-driven motor guarantees 100 % explosion protection.

Pumps for double-acting hydraulic cylinders are equipped with an additional 4-way control valve type VHH-4/3. The connected hydraulic cylinder is controlled - advance - hold - return - by the universal pedal, which can be either hand or foot-operated.

Control of cylinder motion

- Pedal in neutral position – motor stands still, cylinder stands, pressure is held.
- Pedal depressed – motor starts, cylinder advances, pressure is built-up.
- Pedal pushed forward – motor stands still, pressure is released, cylinder retracts.

PY-11/3/20/4 M

PY-07/3/10/3 E

PYE and PY
Electric hydraulic power packs

Single-stage and two-stage

Power packs are easy to operate as they are fully assembled and easy to control.

The use of power packs is always recommended when jobs have to be done in a time-saving and efficient way, when repeating jobs have to be finished off, quick cylinder cycles have to be achieved or if large oil volumes in connection with high-tonnage cylinders have to be transmitted.

Two-stage output

The standard power packs are equipped with two-stage pumps, which means that a low pressure stage fills the connected hydraulic cylinder quickly up to a pressure of 80 bar. The high pressure stage is activated automatically from 80 bar up to 700 bar, while the low pressure stage is discharged back to the reservoir. This economic solution avoids heating-up, saves energy and keeps the power packs compact.

Single-stage output PYE

The hydraulic packs have single-stage pumps. These packs deliver between 0 and 700 bar with the same volume (high-pressure stage).

Control/Operation

The motion control of the connected hydraulic cylinder is done by operating the directional valve.

Do you have a single-acting or a double-acting hydraulic cylinder?

The directional control valve has to correspond to the a.m. functional principle of the hydraulic cylinder to be operated. Depending on these principles the power packs are equipped with a:

- 3/3-way valve to operate single-acting hydraulic cylinders (connection with one hydraulic hose)
- 4/3-way valve to operate double-acting hydraulic cylinders (connection with two hydraulic hoses)

The directional control valves are available either as manual or solenoid operated valves.

Operation of the directional valves

Depending on the way of operation, there are manual or solenoid operated valves. Manual valves are controlled by shifting the operating lever and represent the economic way of control.

These valves have 3 lever positions:
- advance - hold - return -

Solenoid valves

Solenoid valves have the advantage that they are controlled by a pendant remote control box which makes the operator independent from the power pack, making it easier for him to monitor the job.

The solenoid valves are controlled by two push-buttons – advance – return –
In neutral position – hold – the valves rest in pressureless circuit. Pressure and force of the connected cylinder are held without pressure drop. The complete electrical set-up (with 24 V control) belongs to the scope of delivery. Solenoid valves allow a very ergonomic operation and offer a quick and precise switching (millimeterwise) of the connected hydraulic cylinder.

Pressureless circuit

In neutral position all directional valves rest in pressureless circuit which means that the oil flow coming from the rotating pump is guided back to the reservoir without creating any pressure build-up.

Special solenoid valve configurations

Some applications require a special valve configuration, e.g. the independent control of several hydraulic cylinders from a single power pack. In such cases the complete valve build-up and electrical control is designed according to customer‘s requirements.

Pressure-guard power packs

By using an electro-hydraulic pressure switch and a special electric control, power packs automatically control their pre-adjusted pressure. In applications where the pressure (load) should be applied over a very long period, the connected power pack is switched on and off automatically and replaces the pre-set pressure in case a pressure drop has occured.

Trolleys

For all power packs we offer a cart-frame for flexible movement from job to job. Cart-frames are equipped with 2 fixed and 2 swivel castors.

Oil cooler

For certain applications, especially when power packs are continuously operated and the oil temperature could exceed 60 °C, the use of an oil cooler is recommended.

Hydraulic oil

All power packs are designed for an operation with standard hydraulic oil (specification ISO VG 32).
For certain operating conditions the viscosity class of the hydraulic fluid can be varied.
All power packs are supplied including oil.

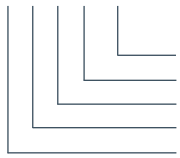

Features

- Robust packs, also capable for contiuous applications.
- Suitable for all jobs in workshops and on construction sites where hydraulic force is required; supplied ready to use.
- On-off motor switch and 3 m motor connecting cable.
- With carrying handles, oil level gauge, oil filler/resevoir ventilation plug.
- Incl. pressure gauge GGY-631.
- Two-stage displacement, which means a rapid advance without load, as well as an automatic switch into the 2. phase by a congruous load.
- Low noise level due to standard motors with 1450 U/min.
- Futher motor voltage and oil resevoirs on request.
- With manual or solenoid operated directional valves.
- Solenoid valves with 3 m remote control box (with 2 push-buttons) and pressure set valve as standard. Adjustable from 0 - 700 bar.
- 24 V - low voltage control includes a sturdy metal electric control box and ready to use set up.

Hydraulic power pack with protection cage

This power pack is specially designed for general lifting applications in construction areas. Equipped with an optimized valve configuration, including 4-way manual directional valve VHP-4/3-1, safety-check valve VSM-21, pressure relief valve VPR-1 and two pressure gauges for permanent load control.

Hydraulic power pack with 4-way manifold MY-44-GYA

The most economic way for a pressure-independent and individual control of four single-acting hydraulic cylinders. The additionally mounted safety-check valve VSM-21 avoids uncontrolled pressure drops, and the built-in throttle valve allows a precise (millimeterwise) lowering even of the highest loads. Four pressure gauges allow a permanent reading of the individual loads. On request, the power packs can be equipped with a handy cart-frame to make the operation flexible. This type of power pack can be supplied in all sizes of the PY and PYE series.

Hydraulic power pack with 4-times solenoid valve

The quadruple solenoid valve block ensures a pressure-independent and individual control of four double-acting hydraulic cylinders. Solenoid valves offer several well-known advantages such as: ergonomic and safe control by pendant remote control, exact load hold, precise and quick switch characteristics and many more.

Double-hydraulic power pack

In order to realise very high oil flows, two independent pump systems can be combined in one large reservoir. A gear pump ensures an extremely high oil flow up to 250 bar while the high-pressure stage is generated by a high-performance radial piston pump. Each pump is equipped with its own solenoid control valve so that the individual oil flows can be generated or discharged on request.

INFO

The Yale electric power pack PYB

Hand pumps are the most common power source within the area of “High-Pressure Hydraulic Tools”. Using a hand pump can require a higher force. The new cordless power pack PYB is a highly efficient replacement for a standard hydraulic hand pump.
Adding this pump to our sales programme enables us to offer four pump types - giving the user more flexible options to choose from.

Relief valve

The fine-adjustment relief valve in connection with the lever allows millimeter increments when lifting and lowering even the highest loads. The fact that sometimes hundreds of tons are controlled by this hand wheel underlines the importance of this feature.

Robust aluminium/metal construction

The aluminium die-cast housing ensures low weight and protects the battery. Plastic reservoirs filled with oil may present a fire risk in connection with welding or similar hot work!

Shoulder belt

A shoulder belt can be attached to the lifting eyes making it easier to carry the pump.

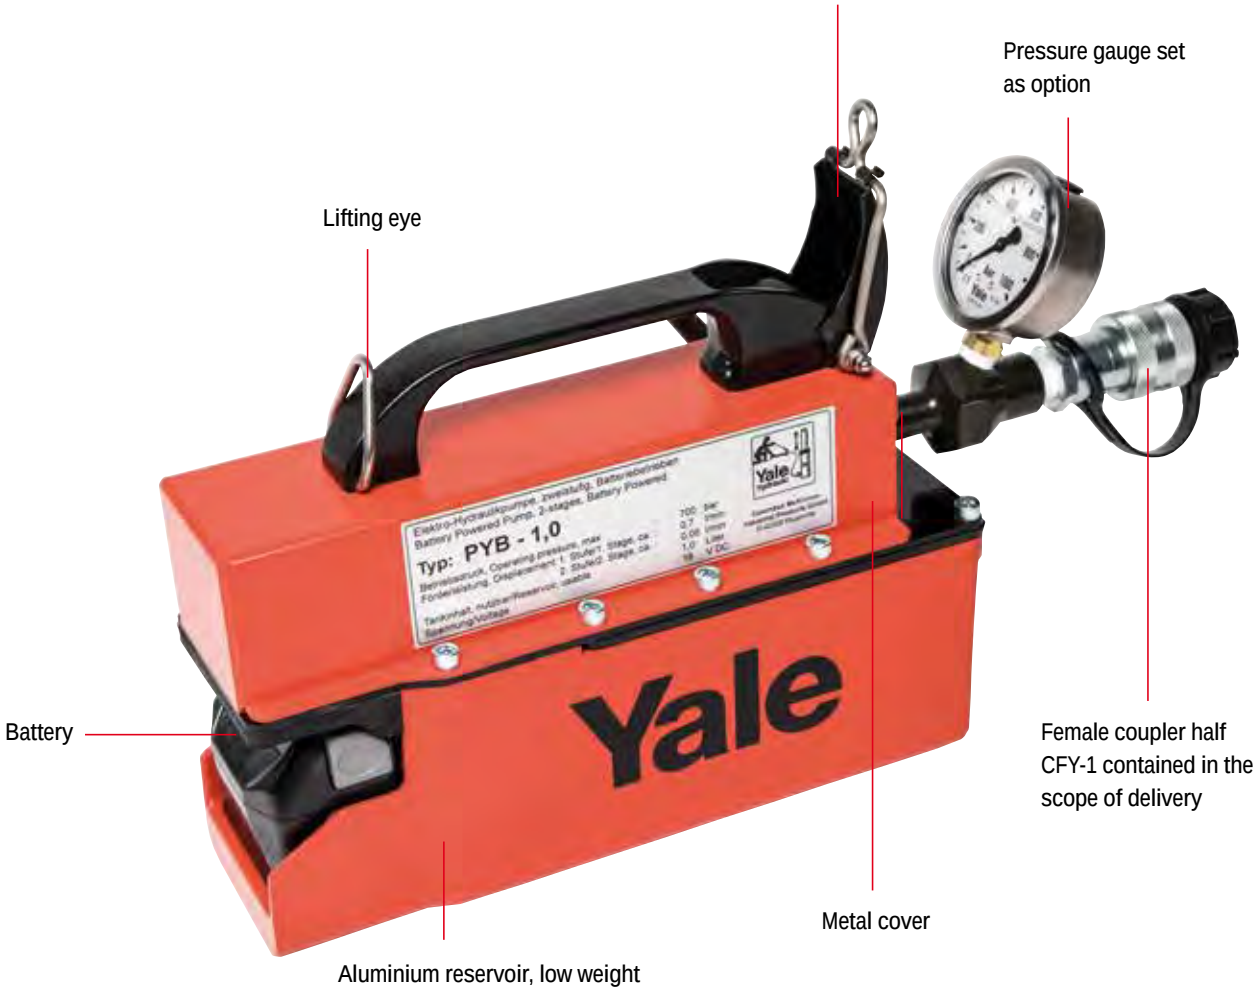

Pressure relief valves

The electric power packs PYB are equipped with two internal pressure relief valves.
The high pressure stage is set to a maximum operating pressure of 700 bar, to avoid over-pressurization of the system.

NEW DEVELOPMENT

CORDLESS TECHNOLOGY!

FOR MOBILE OPERATION

Rubber tank bladder

The rubber tank bladder of the PYB enables the pump to be used in any position. The total available oil volume can be used.

Two-stage output

Both PYB power packs have a two-stage design. This allows increased speeds and efficient working during unloaded conditions of the hydraulic cylinder. The switch-over from the low pressure to the high pressure stage is done automatically.

Both pumps PYB are “identical”.

Except for the reservoir and the cover both units are identical. Which means that nearly all parts are inter-changeable.
So keeping spare parts can be minimized, e.g. only one seal kit has to be stocked to service both pumps.

Excellent suction properties

Hand pumps draw and displace 100 % of their volume per stroke. This results both in a high efficiency as well as a rapid cylinder movement.

Interchangeability

All hydraulic cylinders, hand pumps and other compo-nents are fully interchangeable and can be combined with all other 700 bar hydraulic lines. The PYB is equipped with a female coupler half CFY-1.

Pressure gauge

Appropriate pressure gauges with the corresponding adaptors are shown in this catalogue.

Cordless power pack:
PYB-1.0 c/w optional gauge adaptor set GYA-63.

Battery and charger

The Batterys and chargers are HiKOKI original parts and are commercially available. Which means every customer can decide if and how many Batterys and chargers they want to order with Columbus McKinnon or if they want to purchase the necessary parts locally.

PYB-0,6

PYB
Elektric power pack, battery driven

Operating pressure max. 700 bar

The Yale PYB cordless power pack provides a flexible edition to the Yale hydraulic programme.

This extremely compact and lightweight power pack gives the user the freedom to operate in areas where there is no power source, increasing productivity over the conventional hand pump and all at the push of a button.
The power pack utilises a standard HiKOKI LI-ION battery and charger to maximize operation.

Ideal for a range of applications using small to mid size single-acting cylinders, hydraulic spreaders, lifting wedges nut splitters and much more.

Features

- Operating pressure max. 700 bar.
- One-Hand-Operation. Push-button integrated into ergonomic handle.
- Two-stage operation with automatic switch-over.
- With internal pressure relief valve.
- Reservoir made from aluminium, extreme low weight.
- Protective cover to prevent inadvertent switch on of pump.
- Rubber tank bladder enables the pump to be used in any position.

Optional/Accessories

Standard HiKOKI Batterys (Typ BSL36A18x2) and chargers are exclusively used.

- Battery PYB-BAT, 18 V, weight 0.7 kg
  Art.-No. 192043950
- Quick-charger PYB-CHARG,
  230 V and 12 V (car plug socket incl.)
  Art.-No. 192043961
- Pressure gauge set GYA-63 consisting of:
  Gauge GGY 632, Ø 63 mm, 0 - 1000 bar and adaptor.
  Art.-No. N14200497
- Hydraulic hose HHC (to complete the connection a male coupler half CMY-1 is required)

Scope of delivery

- Electric power pack, battery driven
- Oil filled ready for work
- Female coupler half CFY-1
- Shoulder belt

Ideal application in combination with compact, portable hydraulic tools like spreaders, lifting wedges, low profile and flat cylinders as well as nut splitters

PMF-15/3/40/4 x 3 M

INFO

All extra loads can be meter-read permanently.

PMF
Multiple-flow hydraulic power packs

Multiple-flow hydraulic pumps can advance four cylinders with the same speed at the same time by injecting equal amounts of hydraulic oil into each individual cylinder. This principle allows a synchronized lifting of machines or similar loads from a central point. Even under different loading conditions the cylinders advance in synchronisation.

Levelling of a lopsided load is easily possible by an individual control of each single cylinder. The lifting phase is initiated by a push-button remote control box and can be interrupted and continued at any time.

Lowering of the load is done by operating the directional valve in connection with the throttle valve individually for each circuit. The multiple-flow pumps can drive all kinds of hydraulic cylinders, machine jacks or stage lifts.

Features

- 4-point synchronized lift due to 4 equal, independent and individual oil flows.
- 4 manually operated directional valves, or 4 solenoid directional valves allow an individual or joint control of all 4 connected cylinders (easy levelling of loads).
- Safe load hold due to check valve in each circuit.
- One-man central operation.
- Motor on-off switch by means of a pendant remote control box in connection with manual valves
- A complete remote control box to operate the solenoid valves.

Optional

- All pump packs are also available with 4/3 direction-valves (for controlling the double-acting hydraulic cylinders).
- All power packs can be supplied with a protection frame suitable for on-site operation.
  Also cart-frames with 2 fixed and 2 swivel castors are available on request.

Scope of delivery

For each of the four circuits the ready-to-use supply includes: glycerine-damped pressure gauge, 3-way control valve, safety-check valve, a female coupler-half as connecting port. Furthermore: hydraulic oil, carrying handles, motor on-off switch, motor connecting cable, pendant remote control, electro-box with transformer and motor relais, oil level gauge and oil-filler/ventilation plug. All multiple-flow power packs are also available with 4-way directional valves in order to operate double-acting hydraulic cylinders.

PMF
4-multiple-flow power packs with solenoid directional valves

4-multiple-flow power packs with solenoid directional valves to advance 4 hydraulic cylinders independently and in a synchronized way by means of solenoid valves with a pendant remote control box.
The solenoid valves in connection with safety-throttle valves allow a precise control of all connected hydraulic cylinders.

INFO

All multiple-flow power packs are also available with 4-way directional valves in order to operate double-acting hydraulic cylinders model PMF.

VHP-4/3-1 with VSM-21

This port can easily be used to connect a pressure gauge and a pressure relief valve (e.g. VPR-1). The oil port T shall always be connected to the reservoir without any back pressure.

VHP and VHH Directional valves

Manually operated, 700 bar

These directional valves control the oil flow in combination with hydraulic power packs (YHH-4/3 with hand pumps).

All valves have 3 lever positions to control movement of the connected hydraulic cylinder:

1. Left: cylinder advance.
2. Middle: cylinder neutral (pressureless circuit).
3. Right: cylinder retracts.

In the middle position (hold) the piston of the cylinder stops and the oil flow is guided in a circuit back to the reservoir (P to T). The valves can be flanged directly onto power packs but can also be connected by using hydraulic piping.

In addition, all valves are equipped with a second pressure oil port P at the back of the valve base.

Technical data VHP and VHH

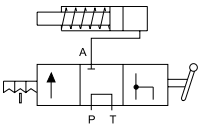

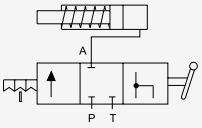

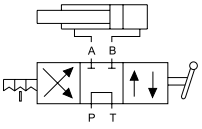

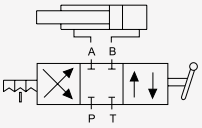

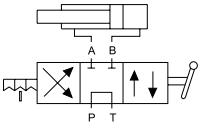

Model	Art.-No.	Pressure max. l/min	Size	Oil ports	Hydraulic symbol	Applications
VHP-3/3-1	N14100718	8 - 16	1	3/8 NPT		3/3-way valve with “open centre” in middle position (pressureless circuit) to control single-acting hydraulic cylinders

Special design to be mounted directly to all HPS hand pumps (with connecting set FY-703). Also suitable for small hydraulic power packs

Table of contents >>

VEP
Directional valves

Solenoid incl. pressure set valve, 700 bar

Solenoid operated valves are used to control the connected hydraulic cylinder by means of a pendant remote control or further electrical controls like pressure switches or limit switches.

Control principle

All solenoid valves have 3 positions:
- advance - hold - return -

In neutral position (- hold -) the valves switch to “pressureless circuit” so that the oil flow is guided back to the reservoir while the connected cylinder is safely held under pressure.

Normally, solenoid valves are mounted directly onto power packs but can also be connected by using hydraulic piping.

Design

Long-life, direct-control ball seal valves with leak-free “load hold function” in neutral position.
The solenoids guarantee a very quick reaction of the valves so that cylinders can be controlled millimeterwise.
The valves are suitable for continuous operation (100 % on/off duration).

Modular design

The modular principle allows special valve configurations e.g. control of multiple cylinder systems or specific control sequences.

Pressure adjustment

All solenoid valves are equipped with a precision-adjustable pressure set valve which allows the system pressure (force of cylinder) to be limited to any value from 0 to 700 bar.

VEP-3/3-1 VEP-4/3-1

Pressure gauge

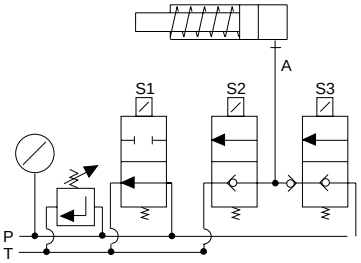

A glycerine-damped pressure gauge GGY-631 is standard with solenoid valves, 0 - 1000 bar, Ø 63 mm.

Mounting flange

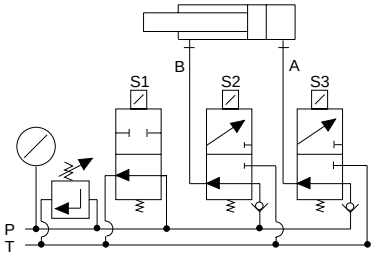

The valve flanges are designed in a way that valves (with pressure connector) can easily be mounted onto power packs.

Optional

The connector model FY-905 is to be ordered separately.

VEP-3/3-1 and VEP-3/3-2
for single-acting cylinders

VEP-4/3-1 and VEP-4/3-2
for double-acting cylinders

INFO

If oil ports A and B should have 3/8 NPT the adaptor model FY-30 is to be ordered separately.

VSM
Safety-check valves

700 bar

These safety-check valves are used for those applications where pressure drops must be avoided (e.g. holding of a lifted load). Depending on the location in a hydraulic circuit, these valves can have different functions.
The model VSM-11 can be directly screwed into the oil port of a hydraulic cylinder and works at this location as a “hose break fuse”. The design of the VSM-21 is suitable for a combination with VHP directional valves.

At this location the VSM-21 ensures that the pressure is held precisely and that pressure drops caused by operating the directional valve are avoided.

Selection advice

If the valve is to be screwed directly into a hydraulic cylinder, please order model VSM-11.

If the valve is to be combined with the directional valve of a power pack, please order model VSM-21.
(see picture on page 410).

Operation

After closing the relief valve (hand wheel) the cylinder can be advanced via the by-pass. In direction to the cylinder the valves always have free flow. The built-in check valve ensures that a pressurized cylinder (e.g. a lifted load) is held precisely in stop position.
A smooth lowering speed can be adjusted by opening the throttle valve (hand wheel) in order to relieve the pressure. A safety pressure valve protects the cylinder from being overloaded by external loading.

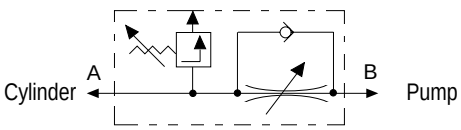

Technical data VSM

VPS
Pressure switch

Adjustable between 100 - 800 bar

As soon as the pressure has reached the set value, a micro-switch (altering contact) is activated.

This signal can be used:

- For automatic pressure limiting.
- To report a certain pressure value.
- As an automatic motor on/off switch with pressure guard power packs.

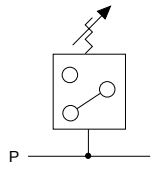

Technical data VPS

Model	Art.-No.	Control range bar	Electric data	Oil ports	Difference of switch point bar	Repeat accuracy bar	Weight kg

Dimensions VPS

Model	VPS-1
Height x Width, mm	130 x 85

Hydraulic symbol

As soon as the pressure has reached the set value, a micro-switch (alternating contact) is activated. Should the pressure drop, the micro-switch starts the pump again in order to rebuild the pressure.

VPR
Pressure relief valves

0 - 700 bar

Pressure relief valves are used it the system pressure (force of the connected hydraulic cylinder) should not exceed a certain value. These precision valves can be easily adjusted and are characterized by precise repetition. The question of a pressure relief valve only depends on the displacement of the high pressure stage of the power pack.

After achieving the set pressure value, the excessive oil is guided back to the reservoir (pressureless).

MY
Manifolds

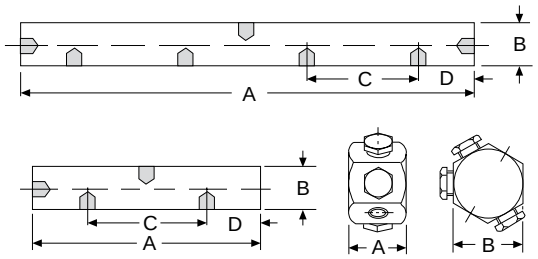

700 bar

Manifolds are used when several hydraulic cylinders have to be connected to one hydraulic pump. All manifolds are equipped with 3/8 NPT inner oil ports, so that fittings, hydraulic hoses and couplers can easily be attached.
To connect a manifold directly to a hand pump a FY-1 double nipple is recommended.
Each manifold is supplied with three steel blind plugs in case not all the oil ports are required.

Technical data MY

Model	Art.-No.	Oil ports	Weight kg
MY-1	N14100164	6 x 3/8-NPT inner	0.5
MY-2	N14100247	4 x 3/8-NPT inner	0.6

B, mm	50	40	40
C, mm	–	90	90
D, mm	–	30	30

MY
Manifolds

With shut-off valves, 700 bar

Manifolds with shut-off valves are used when different pressures must be maintained in each hydraulic line and therefore allow the lifting of unequal loads. The manifolds are fully assembled and can be screwed directly to a hand pump or power pack. Depending on the way of assembly a short hose HHC-10 and a coupler half CFY-1 can be helpful.

Manifolds models MY ... GYA are equipped with the corresponding number of shut-off valves plus pressure gauge sets (GYA-63) which allow a permanent reading of each individual load.

Technical data MY

Model	Art.-No.	Version	Weight kg
MY-22	N14100503	2-way manifold with 2 shut-off valves	1.8
MY-44	N14100504	4-way manifold with 4 shut-off valves	3.7
MY-66	N14101056	6-way manifold with 6 shut-off valves	5.5
MY-22-GYA	N14101024	2-way manifold with 2 shut-off valves and 2 pressure gauges	2.8

HPK-10
Transportation box

For hand pumps, hydraulic cylinders and accessories

For easy transportation and protection of your valuable tools. Large enough to take a hand pump with pressure gauge and hydraulic hose plus several hydraulic cylinders.

The sturdy sheet metal box is equipped with a solid handle and two clasps.

HPK-10
Dimensions (L x W x H): 800 x 300 x 170 mm,
Weight: approx. 7.8 kg.

HFY
Hydraulic oil

For all hand pumps and power packs

The high quality of the Yale hydraulic oil guarantees a long service life for your equipment.

The high grade HLP oil comes as follows:

Features

- Class of viscosity ISO VG 32.
- High lubrication index.
- High pressure resistance
- Favourable temperature/viscosity index.
- Protection against corrosion and cavitation.
- Minimizes the formation of foam and sludge.
- Good derivation of temperature.
- No aging problems
- Good compatibility with all sealing materials.
- Fulfills all requirements of DIN 51524 part 2.

Technical data HFY

Model	Art.-No.	Content l
HFY-1	N14300194	1
HFY-5	N14300195	5
HFY-10	N14301061	10
HFY-20	N14301062	20

GGY
Pressure gauges

The use of pressure gauges is recommended when the operating pressure (the force of the connected cylinder) should be monitored. Yale pressure gauges are equipped with a stainless steel housing and an acrylic plastic face cover plate.

To absorb pressure shocks gauges are glycerine-filled, thus contributing to a long service life. Also, when fitted to a motor pump, the pointer will stay jitterfree.

For the calculation of applied cylinder forces corresponding converting charts (pressure vs. force) can be supplied for all Yale hydraulic cylinders free of charge.

HHC
Hydraulic hoses

Durable but highly flexible thermoplast hydraulic hoses guarantee a very long life.

The 4-layer build-up includes 2 layers of high tensile steel fabric and robust fitting with 19 mm hexagon.

The volumetric expansion is very low. Hydraulic hoses model HHC are equipped with a male coupler half as standard.

Standard length are as per the chart below, further lengths or hoses with larger diameters are quoted on request.

Technical data HHC

How to order

Hydraulic hose for all standard combinations (- pump - hose - cylinder -):

Order a standard hose with female coupler half HHC-... (e. g. HHC-20).

Hydraulic hose for coupling connections on both sides (both ends with CMY-1):

Order a complete coupler CCY-1 in addition to a standard hose HHC-... (recommended for long hydraulic hoses).

Hydraulic extension hose (one male coupler half, one female coupler half):

Order a female coupler half CFY-2 (inner thread) in addition to a standard hose model HHC-...

Hydraulic hose without any coupler parts (both ends with threaded nipples):

Order model HH-... (both ends 3/8-NPT outer).

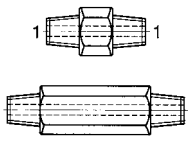

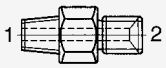

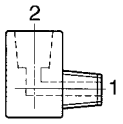

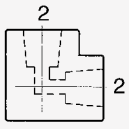

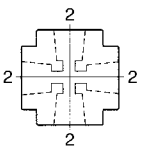

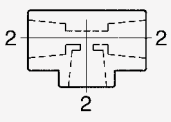

FY
Fittings, reducers, connectors

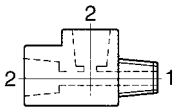

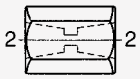

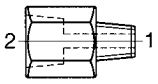

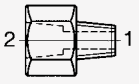

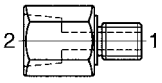

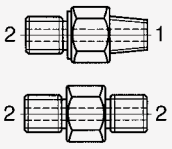

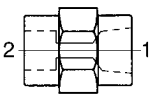

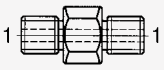

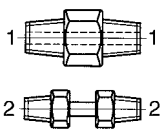

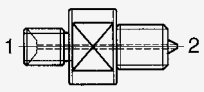

Fittings are useful for versatile combinations of hydraulic cylinders.

Yale high pressure fittings have been designed to give a variety of connections, extensions and combinations. The fittings are designed for a max. system pressure of 700 bar.

For improved sealing of 3/8 NPT connections use two layers of teflon tape and tighten accordingly.

BMZ
Hydraulic puller with integrated hydraulics

Pulling force max. 6, 8 and 11 t

Hydraulic pullers are a valuable tool for the maintenance engineer. The pullers allow time and cost savings as they offer high working safety and can be operated in all positions. Hydraulic pullers are used in all kinds of industries, workshops and in many repair and assembly jobs to remove or install interference fit parts, such as: gears, couplings, bearings, wheels, pulleys, axles, shafts, break drums and many other press fit components.
Damage to parts is minimized through the use of controlled hydraulic power, whilst machine down-time can be reduced drastically.

Features

- Drop-forged alloy steel jaws.
- Hard chromium plated piston, spring return.
- No radial moment of torsion.
- No spindle wear.
- Integrated hydraulic cylinder and pump.
- Quick adjustment with trapezoid speed nut.
- 3 and 2-jaw design.
- Pump lever can rotate through 360°.
- Piston with durable, spring loaded centering tip.
- Supplied in a sturdy plastic box.

Puller sets with separate hydraulics 10, 15 and 23 t

Pulling force max. 10 - 23 t

The harder the pulling force, the tighter the grip of the jaws. Longer jaws up to 1000 mm are available on request.

Features

- High quality components from our standard hydraulic programme.
- Modular system, hydraulic parts can also be used for many other applications.
- Long-life hydraulic cylinders manufactured from chromium-molybdenum steel.
- Two-stage quick-action hand pumps.
- Incl. high pressure hydraulic hose with quick coupler, L = 2.0 m.
- All complete sets are supplied in metal box HPK-10 or wooden case.
- All sets are supplied ready to use.

Scope of delivery:

- Pressure gauge set GYA-63.

Accessories for BMZ-2300 and BMZ-2311: BMZ-2308 extensions of pulling arms increase the reach (A) up to 395 mm. BMZ-2309 up to 495 mm.

Pressure gauge set GYA-63 is part of the scope of delivery.

BMZ-1010 and 1510

The harder the pulling force, the tighter the grip of the jaws. Longer jaws up to 1000 mm are available on request.

BMZ-2311

The radially adjustable pulling arms can be locked in any position.

YHP
Hydraulic puller sets

Pulling force max. 10 - 50 t

These professional puller sets are designed for removing and installing press-fitted or heat-fitted parts.

Hydraulic puller sets eliminate time-consuming and costly repairs as they avoid the damage of parts and reduce machine downtimes. All parts are manufactured from high quality drop-forged steel.

Scope of delivery

The complete sets are supplied ready to use and include all necessary components such as hollow cylinder, hydraulic hand pump, pressure gauge (to control the pulling force) and 2 meter hydraulic hose with quick-connect coupler.

INFO

The set “Cross-bearing puller” have reduced max. pulling forces.

3-Grip puller sets

For all pulling jobs where solid parts have to be removed, e.g. gears, belt pulleys, sprockets, flywheels, couplers, shafts, axles etc. The sets can be used as both 3-jaw and 2-jaw puller.

Model	Art.-No.	Pulling force max. t

AJH-620

AJS-65

AJS-104

AJH and AJS
Aluminium hydraulic jacks

Capacity 6.5 - 100 t

Aluminium jacks combine light weight with high lifting capacity. The use of high tensile aluminium alloy allows lifting capacities of up to 100 tons resulting in a very favourable 1.8 tons lifting capacity per 1 kg weight ratio. Operation of Yale hydraulic jacks is very simple. Jacks are supplied ready for use, i.e. including hydraulic oil, operating lever and, where applicable, carrying handle and lifting claw.

Aluminium jacks with lifting claw

Jacks from 20 tons are available with a lifting claw. In this case the jacks are provided with an elongated base plate. The max. permissible working load of the lifting claws is 40 % of the jack capacity.

Aluminium jacks with safety lock nut

Jacks from 20 tons can be supplied with a safety lock nut. This device allows absolute safe jacking over a long period. In this case the hydraulic jack can be operated like a mechanical support and the hydraulic system can be totally released.

Application

Hydraulic jacks are universally popular tools for use in workshops or on site for all kinds of lifting and assembly applications, for construction, shipbuilding, power plants, general engineering, metal fabrication and many more. Applications are unlimited. Standard jacks with plain piston and jacks with safety lock nuts cannot be used with a lifting claw. To increase stability, all jacks with long stroke (305 mm) are equipped with an elongated base plate.

Features

- Strokes from 75 - 305 mm.
- Extremely low weight.
- The 6.5 and 10 tons jacks can be operated in any position (also upside down) and are equipped with spring return piston and stop ring.
- The 20 to 100 tons jacks can be operated vertically or with front face in horizontal position.
- All jacks are provided with an overload protection valve.
- From 20 tons capacity with additional mechanical stroke limiter.
- All jacks with hardened alloy steel saddle and sensitive lowering valve which is activated by the operating lever.

YAM
Machine jacks with lifting claw

Capacity 2 - 15 t

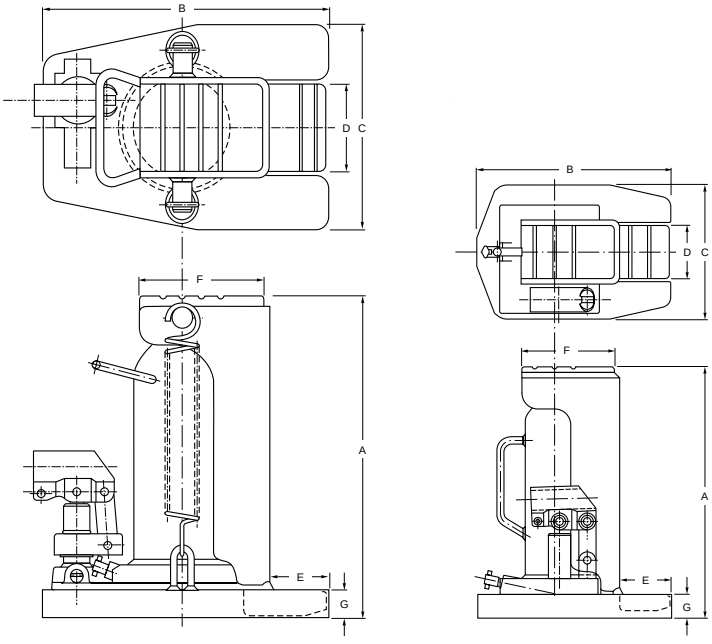

Machine jacks with lifting claw are used in applications where space below the load is restricted, thus preventing the use of traditional lifting equipment.

Typical applications for machine jacks are lifting, positioning and transportation of machines, heavy steel constructions or similar loads, as well as general repair and assembly applications.

The jacks are also useful for applications like leveling of high-rise warehouses, heavy-duty scaffolds, large frameworks etc.

Features

- Offers safe lifting of machines with an extremely low clearance.
- Incl. safety pressure valve to prevent overload.
- Large base offers increased stability under load.
- Pump lever can rotate through 270° (excluding YAM-2).
- Same load can be lifted on either the head or the claw of jack.
- Spring return of the lifting claw (only YAM-5 and YAM-10).
- Precision-adjustable lowering valve.
- Jacks are supplied ready to use incl. pump lever, and are filled with oil.

YAP
Hydraulic machine jacks

Capacity 4.5 - 50 t

Hydraulic machine jacks are designed for the safe lifting and positioning of machines and similar heavy equipment.

Features

- These jacks are operated with external pumps, e.g. hand or motor pumps but also with synchronous power packs.
- The compact construction allows operation even in extremely confined areas.
- 3 hook-in positions of the lifting claw provide high flexibility (model YAP-5130 4 hook-in positions).
- The load can be lifted with either the lifting claw or with the head of the jack.
- Welded, distortion-proof steel construction.
- High quality, durable hydraulic components.
- The flat lifting claw allows low jacking height.
- Safe stability due to swivel-mounted support feet.
- The connection between jack and pump is made by a hydraulic hose.
- The jacks are delivered ready-to-use inclusive of carrying handles and coupling half.

YAS
Hydraulic machine jacks

Capacity 3 - 25 t

Hydraulic machine jacks are designed for the safe lifting and positioning of machines and similar heavy equipment.

Features

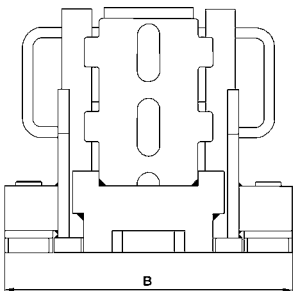

- Integrated hydraulic pump.
- Pump lever swivel mounted 270° for operation even in extremely confined areas.
- Same load can be lifted on either the head or the claw of jack.
- Welded, distortion-proof steel construction.
- High quality, durable hydraulic components.
- The flat lifting claw allows low jacking height.
- The additional connect coupler (10 t capacity and larger) for external pump operation, allows connection of hand, motor or synchronous lifting pumps (max. pressure 520 bar).
- Safe stability due to swivel-mounted support feet.
- Sensitive lowering valve for slow lowering of loads without jerks.
- When operating the jack with an external pump the installation of a manometer is mandatory.
- The integrated hydraulic pump is protected by a pressure-limiting valve.
- The jacks are delivered ready-to-use inclusive of carrying handles, hydraulic oil filling and pump lever.
- YAS-15 and YAS-25 with twin pump for higher lifting speed as well as wheels for easy transportation.

ST
Hydraulic stage lifts

Capacity 50 - 100 t

For compact, low-headroom and universal applications. Stage lifts are hydraulic lifting devices which are designed to lift and lower loads over high distances.

Stage lifts overcome the usual limitations of their lifting height imposed by stroke length. Stage lifts operate with “double-acting“ hydraulic cylinders (return stroke by hydraulic pressure) and are equipped with a load spreading plate and a piston support plate.

Operation

A stage lift operates inverted and lifts the load via the bottom of the cylinder whilst it climbs on a pile of support bars (wood or aluminium). In principle, the load can be lifted to any height although stage lifts are still compact and versatile for low-headroom lifting applications.

The simple “3-step operation“ eliminates the need for additional holding arrangements and the repositioning or replacing of cylinders which are normally required for a higher lifting distance. A stage lift climbs up and down on its own.

Control

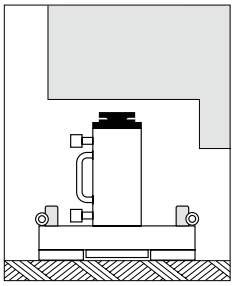

Depending on the power pack, selected stage lifts can be controlled individually (by hand or motor pump) or together in a synchronized arrangement with multi-flow pumps.

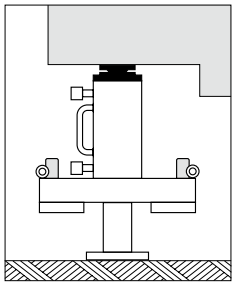

Features

- Yale ChroMo-Design.
- Low-cost lifting systems possible, (3-point resp. 4-point).
- Low weight (e.g. 60 kg for a 50 t unit).
- Stage lift body made from high-grade aluminium.
- Hydraulic cylinders are made from robust chromium-molybdenum steel with double bronze bearings ensure a longlife service system.
- Large-diameter tilt saddle.
- Incl. coupler halves, non-interchangeable on request.

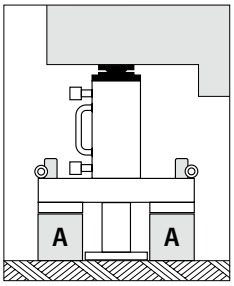

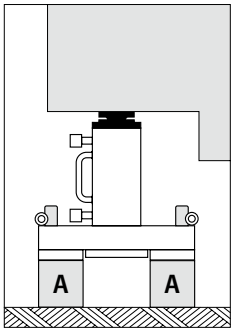

1. Stage: Initial position, stage lift rests on the ground under the load.

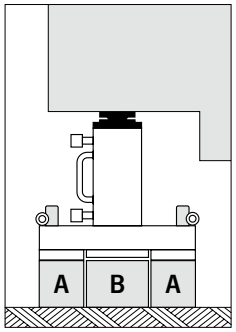

2. Stage: Step 1, load is raised.

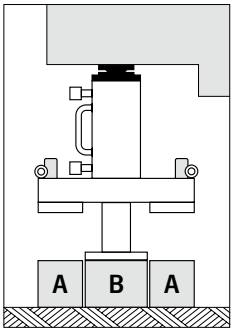

3. Stage: Two support bars type “A” are positioned in place.

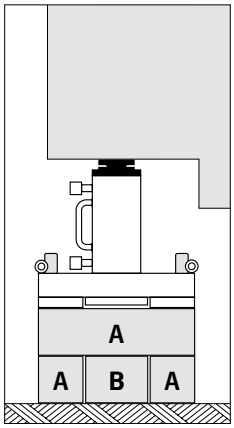

4. Stage: Piston is retracted and load rests on support bars type “A”.

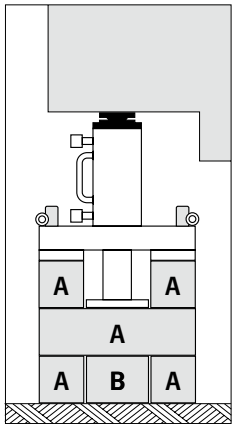

5. Stage: Broader middle bar type “B” is inserted.

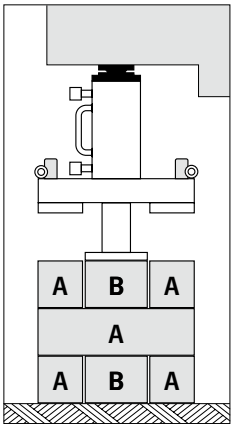

6. Stage: Step 2, load raised on broader middle bar “B”.

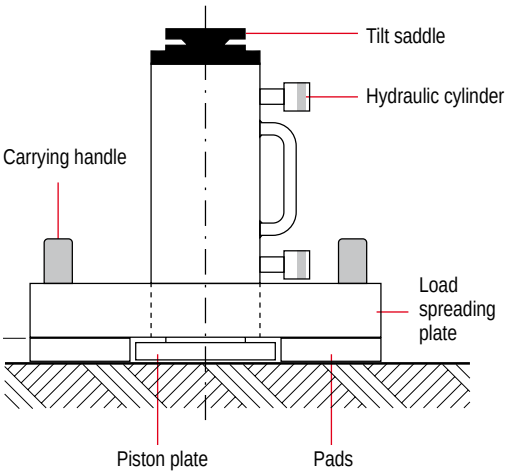

7. Stage: Two bars “A” are inserted and rotated at 90°, piston is retracted and middle bar is inserted.

8. Stage: Load is lifted on middle bar (3rd step), two support bars type “A” are positioned at 90° and load rests on support bars “A”.

9. Stage: Piston is retracted, middle bar type “B” is inserted and lifts the 4th step on middle bar “B” and so on...

YHS
Hydraulic spreader

Capacity max. 0.5 - 1.5 t

These universal power tools can be used for all repair, maintenance and assembly work requiring precisely controlled power, e.g. aligning of containers and shells, lifting, positioning or aligning of machinery and structural components, forcing-off of shutterings and moulds. Applications are unlimited.
The spreaders can be operated with all hand pumps.

Features

- Operating pressure max. 700 bar.
- Single-acting with spring return.
- Works in all positions.
- Spreader arms of high-tensile steel.
- Incl. female coupler half CFY-1 with dust cap.

Technical data YHS

YCC-201
Hydraulic chain cutter

This hydraulic chain cutter has been designed for cutting high-tensile, grade 10 chains up to a material diameter of 13 mm. The open design allows easy positioning of the chain. The unit can be operated using the standard hand or motor pumps.

Recommended pump:
Electric power pack PY-04/2/5/2M

Features

- Cutting performance:
  max. material dimension grade 10 Ø: 13 mm
  max. cutting force: 23 t
  Weight: 37.4 kg
- Solid, stable and rigid body
- Built-in standard hydraulic cylinder, single-acting with spring return
- Both through-hardened cutting blades are identical in construction, can be re-sharpened and are easy to remove.
- Protection flap with acrylic glass pane allows safe monitoring of cutting process
- Opening in base plate allows chips and splinters to fall down through the body for removal
- Special chain support device for cutting larger chains

RPYS-1215
Hydraulic test rig for hoisting equipment

Capacity max. 12 t

For testing pul-lifts, lever hoists, chain blocks, wire rope pullers as well as other lifting equipment after repair or inspection.

Testing of hoisting equipment

The lifting unit is placed between upper and lower shackle, the chain is tensioned against the oil cushion of the partly advanced piston of the hydraulic cylinder.
The applied force can be read at the pressure gauge.

Testing of the hoist brake

For a functional test of the hoist brake the hand pump may be used to apply a counter pressure and thus increase the pulling force after a general test.

Frequent use

For frequent testing, the hand pump may be replaced by a low-cost air hydraulic (model PAY-6) or electric pump (model PY-04/2/5/2 M).

Pressure gauge

To read pulling forces more easily, the test rig is equipped with two high-quality pressure gauges.

Quick couplers allow an easy replacement of pressure gauges.

Pressure gauge 1 for small test items: GGY-1005, display: 0 - 160 bar, Ø 100 mm, Kl. 1.0 %

Pressure gauge 2 for big test items: GGY-1003, display: 0 - 400 bar, Ø 100 mm, Kl. 1.0 %

Permanent load lifting magnet TPM 0,3 for a test in the test rig RPYS-1215 complete with the test plate AYP-1215-S

AYP-1215-S
Test plate for permanent load lifting magnets

Test load max. 12 t

For testing of permanent load lifting magnets according to DIN EN 13155.

The plate is placed into the 12 ton test rig RPYS-1215 (or other versions of this test rig) and connected to the frame with a bolt.

The test plate with a standardised surface according to DIN EN 13155 kann be adjusted horizontally to align it steadily.

Dimensions: 800 x 490 x 60 mm

Features

- Fully welded, low-strain press-frame.
- Upper and lower suspension hook by means of shackles, incl. two 5 tons pull-rings for smaller test units.
- Lateral pump table.
- Infinite adjustment of the pulling force.
- Chart for easy determination of test force.
- Removable lower suspension e.g. for testing of plate clamps.
- Base pre-drilled for mounting.
- High-quality hydraulic components.
- YCS-21/150 hollow cylinder made from chromium-molybdenum steel, heat-treated and hard chromium-plated. Long cylinder stroke of 150 mm with bronze bearings.
- Two-stage quick action hand pump HPS-2/0,7A.
- High-strength threaded bar M27.
- Fine-adjustment pressure valve.

The test rigs are delivered complete and ready to use.

RPYS-1535 Hydraulic test rig for steel winches

Capacity max. 15 t

For the testing of steel winches or similar lifting devices we offer a specific test rig.

Features

- Max. capacity 15 t.
- With hydraulic cylinder YS-15/350.
- Stroke: 350 mm.

Scope of delivery

- Incl. two-stage hand pump HPS-2/2 A.
- Fine-adjustment pressure valve 0 - 700 bar.
- Hydraulic hose 2 m, HHC-20.
- Pressure gauge: GGY-1004, display: 0 - 700 bar, Ø 100 mm, Kl. 1.0 %.

RPY-10 ... (10 t press)
RPY-23 ... (23 t press)

RPY and RPES Universal workshop presses

Capacity 10 - 200 t

For all repair and assembly jobs.

According to European standards, all Yale workshop presses can be used without any additional protection devices as the piston speed is below 10 mm/s.
For special applications additional safety equipment (e.g. protection grid or two-hand-safety-control) can be offered on request.

Applications

- Pressing and removing of bolts, shafts, bearings.
- Straightening of beams, profiles, axles, shafts.
- Forming, bending, crimping.
- General load tests and tests of weld specimens.
- Stamping, cutting, punching.
- Pre-adjustment of tools.

Equipment of all presses

Features

- All workshop presses are ready to use, including hydraulic oil, oil level gauge.
- High pressure-hydraulic hoses.
- Glycerine-damped pressure gauges.
- Fixing holes in base profiles, adjusting device for press table and head, swivelling pump console, conversion chart: Pressure-force etc.

Description of the hydraulic cylinders

Features

- Cylinders made from chromium-molybdenum steel, heat-treated and with metric mounting threads in the piston.
- Double bronze bearing of the hard chromium-plated piston.
- Piston return through spring or hydraulically.
- Mounting thread in the piston.
- Available piston strokes from 150 up to 500 mm.

Description of the press-frames

Features

- Robust, torsion-resistant construction.
- Solid, precision-welded press-frames.
- Open construction, easily accessible from all sides.
- 50 and 100 tons workshop presses with adjustable press table and press head (frames for adjustments are part of the delivery package).
- 200 t press with adjustable table and fix welded press head.
- Four locking bolts ensure a precisely aligned press head and press table and increase the stability of the frame (50 and 100 t).
- 50, 100 and 200 t presses with pivoting pump table with peripheral passage for straigthening of exceptionaly long parts.
- Modular system: Large variety of combinations of hydraulic cylinders and pumps possible.
- Drive either by hand or electric hydraulic pumps.

RPY-50 ... (50 t press)
RPY-100 ... (100 t press)

INFO

The press head of the 200 t model is fix welded to the press-frame.

Workshop presses are delivered ready to use.

Description of the hand pumps

Features

- All hand pumps with two-stage displacement.
- Glycerine-damped pressure gauge, Ø 63 mm, class 1.6 %.
- Hydraulic hose, L = 2.0 m with male coupler half.

Description of the hydraulic power packs

Features

- Longlife radial piston pumps, from 50 t with two-stage displacement.
- Pressure pre-set valve on request (standard equipment for the solenoid valves).
- Glycerine-damped pressure gauge, Ø 100 mm, class 1.0 %.
- Control by manual directional valve (with motor start-stop remote control) or solenoid valve with pendant remote control box.

Selection chart for single-acting systems

Which hand pump is suitable for which hydraulic cylinder?

The appropriate hand pump model basically depends on the oil volume of the selected hydraulic cylinders.
To assist you in your choice please find proposals for the most common cylinders in our range.

How to find the right hand pump in the following charts?

The chosen hydraulic cylinder can be found in the first column.

Several hydraulic cylinders connected to one hand pump:

In those cases where several hydraulic cylinders are connected to one hand pump, the oil volume must be multiplied by the number of connected cylinders. The reservoir of the hand pump must be at least equal to the required total oil volume (plus reserve). If the reserve is very small it may be necessary to top up the reservoir after the air-bleeding procedure, depending on the length of the hydraulic hose. During further operation there is no need to consider the volume of the connected hydraulic hose (regardless of the length) because hoses always remain filled.

Double-acting systems:

Please note that while advancing a double-acting cylinder, about 1/3 of the cylinder's oil volume flows back to the reservoir (coming from the piston chamber). After the air-bleeding procedure both oil chambers will remain filled.

INFO

Please contact us for any questions regarding the configuration of complex systems according to your specific requirement.

+++ recommended hand pump
++ these combinations can also be used, but the oil volume of the hand pump is quite small
– these combinations should not be chosen, because the oil volumes of the hand pumps are too small to fill the selected cylinder (too large and bulky, respectively

Pump and cylinder speed chart

Hand pumps

For hand pumps the figures given correspond to the number of pump strokes to achieve a piston travel of 10 mm.

Power pumps

For power pumps the piston travel speed is indicated in mm/s.

Double-acting hydraulic cylinders

Please note that double-acting cylinders (YCH, YH and YEHB) always retract faster than they advance, due to the different oil chamber volumes.

Reservoir volumes

The reservoir volumes of hand pumps shall at least correspond to the oil volume which is necessary to advance all connected hydraulic cylinders (plus reserve).
Motor pump reservoirs should have at least twice the total required oil quantity (better 3 or 4 times) depending on the operation conditions. For continuous operation choose extra large reservoirs to avoid excessive heating-up of the hydraulic oil.

HWH 2K, 3 t

HWH KS, 5 t

HWH 2K PROLINE
Hydraulic car jack
- with 2 pistons

HWH 2KS PROLINE
- with 2 pistons and spindle

HWH KS PROLINE
- with piston and spindle

Capacity 2 - 30 t

For lifting vehicles on one side (the lifted load must be secured mechanically with supporting stands, for example).

Features

- Versions with hydraulic piston and mechanical spindle drive resp. with two hydraulic pistons.
- With carrying bracket from load capacity 20 t.
- Extremely low design with model HWH 2K/D (incl. one pressure section for lift extension).
- With integrated pressure control valve for a longer service life of the jack.
- Integrated seat valve for controlled lowering of the load.

JH
Universal jacks

Capacity 2 - 50 t

Universal jacks supply high forces for general operations like lifting, pushing, moving, supporting of all kind of loads.

Features

- Robust, long life design.
- Pressure relief valve
- Precise controlled lowering.
- Additional screw extension of the piston (up to 20 t).
- Grooved saddle.
- Large base plates for increased stability.
- JH-50-2 with two-stage pump.
- Incl. operating lever.

MH
Machine jack

Capacity 5 - 25 t

For lifting heavy machinery and other loads.

Features

- Can be used in every position.
- Lifting by means of a hand pump.
- Lowering by means of a precision lowering valve.
- With carrying handle for MH 50 and MH 100.
- With carriage for MH 250.
- Pressure control valve for a longer service life of the jack.
- Integrated lifting limitation.
- Low application height of the claw.
- Slewing claw (MH 50 and MH 100)
- Large base plate for a high level of stability.
- Stable construction with hard-chromium plated piston rod.

Conveyor bestseller: 2200 series

The 2200 series includes flat and incline conveyors with fabric belts, conveyors with plastic module chains, the precision move conveyors designed for precise timing, and gravity roller conveyors. Depending on the version, they are designed for transporting small to medium-sized parts with a total belt load of up to 68 kg.

The 2200 series conveyors feature a robust one-piece aluminum frame construction with universal T-track for easy attachment of accessories. With their slim design, the heavy-duty, low-maintenance conveyors are ideal for integration into machines and systems. They are designed for a wide range of applications, depending on the design for transfers accumulating operation, precise part guidance, incline/incline conveyance, exact positioning as well as automated and manual assembly.

- Transport of small to medium-sized parts
- Transfers accumulating operation and precise parts guidance
- Custom design production
- Improves efficiency, reduces downtime, increases precision
- V-ledge guide ensures that the belt runs exactly straight
- Permanently lubricated bearings
- Rack and pinion system for easy tensioning of the belt

FlexMove conveyors

FlexMove conveyor systems and FlexMove individual components made of aluminum and stainless steel are ideally suited for highly flexible and individual designs.

FlexMove conveyors are designed for complex routes such as horizontal and vertical conveying with and without curves. The slat chain conveyors, also known under product names such as plastic chain conveyors and link belt conveyors, are suitable for any conveyor application in the transport of unit loads. They consist of a modular system with individual components and profiles made of aluminum or stainless steel and a flexible, low-friction plastic chain. FlexMove is available as a complete conveyor system from the modular system for quick and easy installation or as individual components for self-assembly.

FlexMove conveyors offer a variety of options such as flexible chains with cleats, rollers, friction linings, steel plates, anti-static and fabric belts. Additional components and accessories can be attached to the T-slot frame.

- Compact design for maximum use of space while reducing noise and maintenance requirements
- Vertical and horizontal conveyance possible
- Selection of flat top chains for various areas of application
- Speeds up to 50 m/min
- Maximum product loads from 150 to 300 kg
- Suitable for narrow spaces and height differences
- Curves, inclines, declines
- Buffering and accumulation

Stainless steel conveyors

Used and tested by well-known pharmaceutical, food and chemical customers, a complete range of stainless steel conveyors for hygienic areas can be offered.

These include belt conveyor belts in flat, ascending or kinked form as well as flat conveyor belts with plastic modular belt or steel belt, also in curved form, with a variety of equipment options and a comprehensive range of accessories.

Stainless steel conveyors impress with their high level of hygiene. They are ideally suited for mechanical cleaning of all product surfaces as well as quick disassembly for manual cleaning. Most of the conveyors are equipped with patented CleanTec hygiene technology.
The program of the GES series includes: Belt conveyors in flat, ascending or Z-shape, flat conveyors with plastic modular belt, as well as flat conveyors with steel belt, also in curved form.

- High hygiene properties
- Patented CleanTec hygiene technology
- Various side guide options
- Belt tensioning and tracking system
- Ideal for corrosion resistant applications
- Bridging height differences
- Conveyance of bulk and piece goods
- Curves, inclines, declines
- Buffering and accumulation

Aluminum and steel conveyors

The GAL/GF series offers modern conveyor belt solutions with an optimized design for easy integration into existing production processes and systems.

High quality in a short production time. Aluminum conveyors are custom-made between 24 hours and 14 days. The program of the GAL series includes: Belt conveyors in flat, ascending or Z-shape with patented TorsioDur frames, which guarantee very high torsional rigidity, as well as plastic modular chain belt conveyors in flat and/or curved shapes.

The robust steel conveyors of the GF series consist of a quality steel profile with an impact-resistant two-component coating and are also suitable for higher overall belt loads. The 80 mm high frame has holes for attaching accessories and can therefore be flexibly adapted to a wide variety of applications. The program of the GF series includes: Flat and rising conveyors as well as flat conveyors with steel belt.

- Streamlined design for easy integration into existing production processes and systems
- Customized conveyor belts
- TorsioDur, our torsion-resistant aluminum frame
- Fast delivery time
- Various accessories such as straps, stand systems and side guides

Special conveying solutions

Customized conveyor systems are developed according to the needs of the customers, for optimal efficiency and productivity.

The use of conveyor solutions that are optimally geared to the very specific work processes of your company is of the utmost importance. The performance of your production line affects your bottom line. Thanks to the highly specialized technology of our tailor-made conveyors systems, your products are processed faster, your orders are fulfilled faster and your profits are increased.

- Special solutions according to customer requirements
- Coordinated processes for your production line
- Increase in efficiency and productivity
- Original parts guarantee best performance and durability
- Preconfigured parts kits make ordering easier, storage and assembly of parts
- 24/7 service hotline for continuous support
- Installation service

Dorner also offers a wide range of additional equipment and has a large number of spare parts in stock. There is the right type of belt for every conveying task, stands, side guides, feed hoppers and other accessories. In addition, we offer electrical equipment for specific tasks such as sensors and controls.

GAL-25
Flat Belt Conveyor

Belt width 60 - 600 mm

With its extremely small deflecting roller of only 30 mm diameter it is specially well suited for transport of small items, that have to move from one belt to the next. It is also available in a magnetic version with a belt width of up to 200 mm. In this version the frame is magnetic, not the belt. The driving and deflecting roller are also non-magnetic.

The GAL-25 has a very rigid Monobloc quality TorsioDur frame. It is available both in standard sizes and custom made for specific problem solutions. On both sides of the 25 mm high aluminium frame and along its whole length, additional accessories can be fastened by the aid of sliding blocks with an M-6 thread. In any size of up to 400 mm width and 1500 mm length it can be held by a pivotable single column support with an aluminium ground plate. For larger belt widths and in longer versions the conveyor is equipped with the appropriate number of aluminium double supports. Both support systems are adjustable in height and have a vertical position lock.

Technical data GAL-25

GF-80
Flat Belt Conveyor

Belt width 100 - 1400 mm

The flat belt conveyor GF-80 is specially well suited for high total load. In its standard configuration it can transport up to 70 kg. But it can easily be adapted to carry 150 kg or more with out any problem.
Upon request it can be produced in standardised widths of up to 600 mm and in any intermediate length up to 18000 mm within 24 hours.
The robust GF-80 is made from a high-quality steel profile covered with a two component coating. The 80 mm high frame has 9 mm big holes every 30 mm. In these additional accessories can easily be fastened. Therefore the GF-80 is quick to be adapted to various uses. You will find more information on available accessories under the column “Lot of Accessories”.
Any GF-80 with a length of 1500 mm or shorter and with a width of no more than 400 mm can be used on a single column support.
Longer or wider models should use the appropriate amount of double supports, that are shown on the pictures of this page.

Both support systems are infinitely adjustable in height and have a vertical locking system.

Technical data GF-80

GAL-80
Flat Belt Conveyor

Belt width 200 - 1000 mm

The flat belt conveyor GAL-80 is well suited for higher loads. In its standard configuration it is designed for loads of up to 70 kg. But upon request it can be adapted to carry weights of 150 kg or even more without any difficulty.
The robust GAL-80 has an extremely rigid TorsioDur frame in monobloc quality. It is available in standard widths from 200 to 1000 mm and its length can be made to any intermediate measurement needed for specific problem solutions. Over the whole length of the 80 mm high frame, additional accessories can be fixed to sliding blocks with M-8 threads gliding in grooves along the side of the frame. The GAL-80 can therefore be adapted to various uses quite easily. You will find more information on available accessories under the column “Lot of Accessories”.
In lengths of up to 1500 mm and widths smaller than 400 mm the GAL-80 can be equipped with a single column support.

Longer and wider configurations should have the corresponding number of double supports as shown in the pictures on this page.

All support systems are infinitely adjustable in height and have a locking system in their vertical position.

Technical data GAL-80

2200-Series
Flat Belt Conveyor

Belt width 305 - 610 mm

2200-Series low profile, high performance fabric and modular belt conveyors feature a high speed nose bar transfer option, a durable single piece frame design, universal T-slots, and a wide range of belting and guiding options. The conveyors 2200-Series are particularly suitable for transporting small to medium-sized parts, transferring accumulation operations, precise part guidance, incline/decline conveying of parts (Z-frame), positioning, automated and manual assembly.

1. General Terms and Conditions

Quotations are without engagement. An order is only deemed to be accepted, when confirmed by us in writing. Our written order acknowledgement is decisive for the scope of delivery. Any supplements, additional agreements as well as promises of representatives require our written confirmation.
The purchaser is not entitled to transfer any rights from this contract without our approval.

2. Prices and terms and conditions of payment

The prices are those valid on the day of delivery. The agreed prices are calculated on Euro basis. Unless agreed otherwise, our prices are ex works excluding packing. In the cases where we bear the costs of transportation, we only accept liability for the means of transport described in the contract. Unless agreed to the contrary, dispatch will be made at our discretion and without obligation to select the least expensive method of dispatch. Our packaging complies with the German Packaging Ordinance. Any return of packaging material must be free of charge and with freight prepaid. Payment of our invoices is to be made within 30 days after the date of the invoice with 2 % discount or within 60 days after the date of the invoice, net. If agreed periods of payment are exceeded, a compensation amounting to the common bank interests and fees for open business credits, however, at least 5 % above the base rate shall be charged, without a special reminder being required in commercial course of business and under reservation of asserting further rights. The purchaser may only set off undisputed or validly decided counterclaims.

3. Partial deliveries

Partial deliveries by us are permitted.
If partial deliveries are requested by the customer and are made against an existing order, the quantities of the partial delivery shall be deducted from the total order volume. Should the purchaser call quantities beyond the original order volume, we shall be entitled to cancel the excess quantities or to invoice them at the prices valid on the day of delivery. If possible, partial calls shall be made in identical time intervals and for identical quantities. Calls shall be made in good time within a period of 12 weeks so that faultless production and delivery are possible within the agreed delivery time, otherwise the delivery time shall be extended by a corresponding period.

4. Licences and approvals

The purchaser is obliged to obtain in good time all approvals required for performance of the contract including the approvals for monetary transactions. If the required approvals cannot be obtained within a reasonable period, we shall be entitled to withdraw from the contract by declaration to the purchaser after having granted a reasonable extension of time of at least 2 weeks.

5. Delivery time, delay in delivery

a. The delivery time results from the agreements of the contract partners, if it is to be complied with by the seller all commercial and technical questions must have been clarified between the contract partners and the purchaser must have fulfilled all his obligations. If this is not the case, the delivery time shall be reasonably extended. This does not apply, if the seller is responsible for the delay.

b. Compliance with the delivery period is based on the reservation that own deliveries are received correctly and in good time.

c. The delivery period is deemed to be complied with, if the goods delivered have left the works of the seller until it expires or with the notice of readiness for dispatch. If an acceptance test has to be carried out, the date of the acceptance test is decisive, alternatively the notice of readiness for acceptance, unless acceptance is rightfully rejected.

d. If dispatch and/or acceptance of the goods delivered are delayed for reasons the purchaser is responsible for, he shall be charged with the costs incurred owing to the delay starting one month after the notice of readiness for dispatch or acceptance.

e. If non-compliance with the delivery time is the result of Force Majeure, industrial action or other events which are outside the sphere of influence of the seller, the delivery time will be reasonably extended. The seller shall inform the purchaser as soon as possible of the beginning and end of such circumstances.

f. The purchaser may withdraw from the contract without notification of a deadline, if the total service becomes finally impossible for the seller prior to the passage of risk. Furthermore, the purchaser may withdraw from the contract, if for an order execution of a part of the delivery becomes impossible and he has a lawful interest in rejecting the partial delivery. If this is not the case, the purchaser shall pay the contract price accounted for by the partial delivery. The same shall apply in the case of disability on the part of the seller. Otherwise, section 9 applies.

g. If the impossibility or disability occurs during the delay in acceptance or the purchaser is exclusively or mainly responsible for these circumstances, he shall be obliged to render a service in return.

h. If the seller causes a delay and the purchaser sustains any loss due to the delay, he shall be entitled to claim lump-sum compensation. Compensation for delayed delivery for each full week of delay is 0.5 %, however no more than 5 % of the value of the given part of the total delivery which cannot be used on the intended date of application or as per agreement due to the delayed delivery. If the purchaser grants an appropriate deadline to the seller who is in delay for rendering the service taking into consideration the legal exceptions and if this deadline is not met, the purchaser shall be entitled to withdraw from the contract within the framework of the statutory regulations. Any further claims from delay in delivery are exclusively determined as laid down in section 9.

6. Passage of risk

Any risk of accidental loss or accidental impairment of the goods shall pass to the purchaser as soon as the goods are made available to the purchaser or with transfer to a forwarding agent or a carrier, at the latest, however, on leaving the supplier's plant. Should dispatch be delayed as a result of circumstances for which we are not responsible, the risk shall pass to the purchaser on the day of receiving the notice of readiness for dispatch. We shall only conclude insurance policies at the explicit request of the purchaser on his account. All agreements with reference to bearing the transport costs and the costs of insurance exclusively refer to the specified costs and shall not have any effect on the passage of risk, even if the application of Incoterms and Trade Terms has been agreed in this respect.

7. Examination and notice of non-conformity

Any existing defect recognisable in an acceptable examination must be reported in writing at the latest within 8 days after arrival of the goods at the location, any hidden defects must be reported immediately after detection. If special conditions have been agreed regarding the type of examination of the goods, this examination shall be performed in the manufacturer's plant. If in this case the purchaser fails to perform the examination of the goods in the factory in spite of notification of a deadline and instruction about the consequences, the goods shall be deemed approved on leaving the factory. All costs of the examination are to be borne by the purchaser.

8. Warranty

The seller shall grant warranty as follows for defects of quality and legal defects with the exclusion of any further claims and subject to section 9,

Defects of quality

a. All those parts shall be rectified free of charge or replaced by new parts at the discretion of the seller which are determined to be defective as a result of a circumstance occurring prior to the passage of risk. The seller shall be notified in writing immediately of the detection of such defects. Ownership of replaced parts shall pass to the seller.

b. After consultation with the seller, the purchaser shall give the seller the required time and opportunity to carry out all repairs and replacement deliveries the seller considers to be necessary, otherwise the seller shall be relieved of the liability for consequences resulting therefrom. Only in urgent cases of a hazard to safe operation and/or to ward off disproportionately large damage shall the purchaser have the right to eliminate the defect himself or have it eliminated by third parties and to claim compensation for the necessary expenses from the seller; in such cases the seller must be immediately notified.

c. To the extent the complaint proves to be justified, the seller shall bear the costs of the replacement part including dispatch as well as the reasonable costs of disassembly and assembly, and if this can be duly requested on the basis of the individual case, the costs of any required deployment of his fitters and assistants as the share of the costs incurred as a result of rectification and/or replacement delivery.

d. Within the framework of the statutory regulations and taking into consideration the statutory exceptions, the purchaser shall have a right to withdraw from the contract, if the seller allows a reasonable time requested by the purchaser for the rectification or replacement delivery owing to a defect in quality to elapse without effect. In the case of a minor defect, the purchaser shall only be entitled to reduce the contract price. Otherwise the right to reduce the contract price remains excluded.

e. No warranty shall be granted in particular in the following cases: Improper or inappropriate use, incorrect assembly and/or putting into service by the purchaser or third parties, natural wear and tear, improper or negligent handling, improper maintenance, unsuitable operating materials, faulty civil engineering work, unsuitable building site, chemical, electrochemical or electrical influences for which the seller cannot be held responsible.

f. In the case of improper rectification by the purchaser or a third party, the seller shall not beliable for any consequences arising therefrom. The same shall apply for modifications of the goods delivered carried out without the prior consent of the seller.

Legal defects

g. Should the use of the goods delivered result in infringement of industrial property rights and copyright in the country, the seller shall procure at his own cost the general right for further use for the purchaser or modify the goods delivered in a way acceptable to the purchaser in order to ensure that no further infringement of industrial property rights exists. If this is not possible on economically appropriate conditions or in an appropriate time, the purchaser shall be entitled to withdraw from the contract. Under the above-mentioned conditions, the seller shall also be entitled to withdraw from the contract. Furthermore, the seller shall release the purchaser from any undisputed or validly decided claims of the owners of industrial property rights concerned.

h. The obligations of the seller laid down in section 8 shall be final subject to section 9 for the case of infringement of industrial property rights and copyright infringement.
They only exist, if:

– the purchaser informs the seller immediately of any claims made regarding industrial property rights and copyright infringements,

– the purchaser supports the seller in warding off the claims made in adequate scope and/or enables the seller to carry out the modification measures according to section 8 g,

– all defensive measures including settlement out of court are reserved for the seller,

– the legal defect is not based on an instruction of the purchaser and

– the infringement was not caused by the purchaser changing the goods delivered without authorisation or not using them in the manner specified in the contract.

9. Liability

a. If the goods delivered cannot be used by the purchaser as laid down in the contract due to fault of the seller as a result of neglected or faulty implementation of suggestions and consultations prior to or after conclusion of the contract or by violation of other contractual accessory obligations, in particular instructions for operation and maintenance of the goods delivered, the provisions of sections 8 and 9 b shall apply accordingly with the exclusion of any further claims of the purchaser.

b. For damage not caused on the goods delivered themselves, the seller shall only be liable no matter which might be the legal reasons:

– in the event of wrongful intent,

– in the event of gross negligence on the part of the owner/managing bodies or executives,

– in the event of negligent injury to life, body, health,

– in the event of defects which he has concealed fraudulently or the absence of which he has guaranteed,

– in the event of defects of the goods delivered to the extent that according to product liability legislation, liability applies for damage to persons or property on privately used objects. In the event of negligent breach of major contractual obligations, the seller shall also be liable for gross negligence of non-executives and slight negligence, in such a case liability shall be limited to damage typical of the contract and reasonably foreseeable. Any further claims shall be excluded.

c. Force Majeure
Seller shall not be liable for any delay or failure to perform its obligations under any order or sales contract arising out of causes beyond its reasonable control (a “Force Majeure Event”), including, but not limited to, acts of God or public enemy, acts of other parties, acts of civil and military authority, epidemics, pandemics, unusually severe weather, shortage of power or fuel, strikes, lockouts, boycotts, or other labor troubles, government regulations, or delays of Seller’s subcontractors or suppliers in furnishing materials, components, tools or supplies due to any one or more of the foregoing causes. In no event shall Seller be liable for any damages to Buyer caused thereby whether direct, indirect, special, incidental or consequential.

10. Reservation of ownership

The goods delivered shall remain our property until full payment of any and all claims including those incurred in future, which we are entitled to as a result of the business relationship with the purchaser, regardless of the legal reason. The purchaser shall be entitled to use our goods as intended, to process them and to deliver and sell them like a reseller in the ordinary course of business. The Purchaser shall not be entitled to any other disposal of the goods supplied under reservation. If our goods are combined to form a single item with other objects by us on behalf of the purchaser or by the purchaser, it is agreed that the purchaser hereby grants the prorata coownership to us in the sense of Section 947 (1) BGB (German civil code) and holds the item in safe custody for us. If goods are sold for which we have rights of ownership in accordance with the above provisions, the purchaser shall irrevocably transfer at this moment the total claim, if co-ownership applies prorata from the purchase contract, which is at the basis, up to the amount of our residual claim.

The purchaser shall be entitled to collect these claims as long as he fulfils his obligations towards us without any limitation. The purchaser shall immediately notify us by registered letter of any seizure, confiscations or other disposal by third parties and take all measure required to uphold our rights at his own cost. We undertake to release securities we are entitled to on the request of the purchaser at our discretion if their value exceeds the claim to be secured by 25%.
In the case of open accounts the property subject to reservation of title shall serve as security for our payment balance claim. For the duration of reservation of ownership the purchaser shall be obliged to preserve the purchased goods in appropriate condition and to insure them against fire and theft; if requested by us also against machinery breakdown and to prove this to us as well as to transfer to us the claims against the insurance companies at our request.

11. Right of rescission and other rights

In the case of a significant deterioration of the purchaser’s economic and financial circumstances, if the purchaser pledges his warehouse, outstanding claims or sold goods or assigns or transfers ownership of them as security to other creditors or if the purchaser falls into arrears with major shares of his payments, we shall be entitled to require security and, if sufficient security cannot be registered, to make due the residual claim we have or to withdraw from the contract after having granted a reasonable extension of time.
The above provision shall also apply, if the purchaser dies, discontinues his business operations or transfers them to a third party. Should our residual claim not be paid, the purchaser’s right of use for the goods supplied under reservation shall expire. We shall be entitled to request immediate handover of our property. Resumption of possession of the goods delivered shall not be deemed as withdrawal from the contract unless the Instalment Payment Act is applicable. The payment obligation of the Purchaser shall remain unaffected.
We shall be entitled to make the best possible use of the goods supplied in voluntary sale at the expense and for the account of the purchaser. The costs of resumption of possession and exploitation will be charged at a rate of 5% of the revenue from selling without special verification. Additional costs shall be verified.
In the case of legal transactions in the sense of the Instalment Payment Act, we shall also be entitled to withdraw from the contract if the purchaser fails to pay an instalment. In such a case the compensation for use or any replacement for damage may be bindingly determined in an assessment by a sworn expert to be initiated by us. The compensation for use and the replacement for damage shall in this case be calculated as the difference between instalment price and estimated price. Any saved intermediate interests and financing costs shall be made good.

12. Return deliveries

Return deliveries of any kind in principle require our consent and shall be sent in together with the completed form for return deliveries. Otherwise processing is not possible in our company and will result in them being returned to the customer with dispatch unpaid.

13. Warranty processing

We reserve the right to have the equipment transported to our factory at Wuppertal, Germany, for assessment during the warranty period. Any and all warranty claims are based on regular maintenance and inspection of the equipment in compliance with the UVV accident prevention regulations.

14. Choice of venue and place of fulfilment

German law shall govern the contractual relationship. Should individual terms of the contract be ineffective, the remaining contract shall not be affected. Place of fulfilment for both parties is 42329 Wuppertal, Germany. The legal venue is agreed to be Wuppertal in Germany as far as this is legally admissible. We use electronic data processing taking into consideration the Federal German Data Protection Act.
